REPORT

OF THE

SECRETARY OF THE TREASURY,

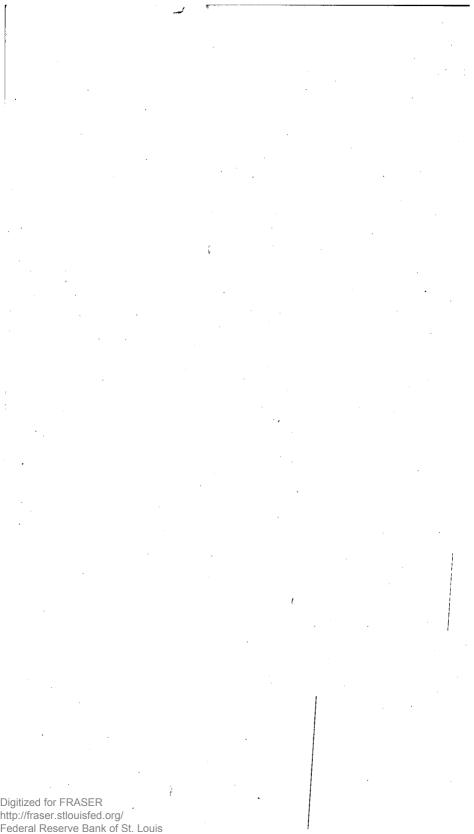

ON THE

STATE OF THE FINANCES,

FOR

THE YEAR ENDING JUNE 30, 1857.

WASHINGTON: CORNELIUS WENDELL PRINTER. 1857.

REPORT

OF

THE SECRETARY OF THE TREASURY

ON

THE STATE OF THE FINANCES.

DECEMBER 8, 1857.—Laid upon the table and ordered to be printed.

DECEMBER 16, 1857.—Resolved, That there be printed, sixteen thousand extra copies of the Annual Report of the Secretary of the Treasury on the state of the Finances, fifteen thousand copies for the use of the House of Representatives, and one thousand copies for the use of the Secretary of the Treasury.

TREASURY DEPARTMENT, December 8, 1857.

SIR: In compliance with the act of Congress entitled "An act supplementary to an act to establish the Treasury Department," approved May 10, 1800, I have the honor to submit the following report:

On the 1st July, 1856, being the commencement of the fiscal year 1857, the balance in the treasury	
The receipts into the treasury during the fiscal year 1857 were \$68,631,513 67, as follows:	\$19,901,325 45
For the quarter ending September 30, 1856-

July 1, 1859, of	1,862,119 70

July 1, 1859, of......

It is difficult at all times to estimate in advance the probable receipts into the treasury for the next one and two years. Our revenue being derived principally from duties on imported merchandise entered at the custom-houses for consumption, the amount is necessarily dependent not only upon all those causes which affect trade and commerce, but on such as control the inclinations and ability of the people in the purchase of such merchandise for consumption.

Ordinarily an approximation can be made to the probable result, provided no unlooked for cause shall intervene to disturb the usual

course of trade and consumption.

The events of the present fiscal year furnish a striking illustration of the uncertainty of all such estimates from the operation of unforeseen causes which exert a controlling influence over the revenue from customs.

When the estimates for the present fiscal year were made to the last Congress by my predecessor, it was impossible to foresee either the material change in the rates of duty, which were among its last acts, or the present revulsion in trade and commerce, both which have deeply affected the revenue, and satisfactorily account for the difference between his estimates and those now submitted. With these two disturbing causes now in view, it is very difficult to form satisfactory estimates of the probable receipts from customs. The tariff act of March 3, 1857, has not been in operation long enough to test its effects upon the revenue even under ordinary circumstances. Simultaneous with this act going into operation, the country is subjected to a disastrous revulsion. To what extent importations would have been affected by it, had there been no revulsion in trade and commerce, is now as much a matter of conjecture as it was before the passage of the act. Experience has thrown no light on the subject. The probability is that it would, to a limited extent, have increased importations, though not to the extent of supplying the deficiency created by the reduction of the duties.

In submitting to Congress, under these circumstances, estimates of the receipts for the present and the next fiscal year, it is deemed proper to accompany them with a statement of facts and principles upon which they have been made, in order that Congress may pass its own

judgment upon the credit to which they are entitled.

The exports and imports of the United States have always borne a relative proportion, the respective amounts not often differing materially from each other. Both have steadily increased, with occasional exceptions, with the growth and progress of the country. In seeking, therefore, to ascertain the probable importations into the country, the amount of our probable exports constitutes an important element in the calculation. The exports for the year ending June 30, 1857, amounted to \$362,949,144, and the imports for the same period were \$360,890,141. The amount of our exports depend not only on the quantity, but the value of the articles exported. The quantity of some and the value of others may be considerably diminished, and yet the deficiency thus created may be supplied by either the increased quantity or value of other articles. It is probable that this very state of things may occur during the present fiscal year. The indications at

present are, that the exports of breadstuffs and provisions will decrease both in quantity and value; but the increased value of cotton, at its probable prices, which constitutes much the largest item of our exports, would make up such deficiency. From the best information which can be obtained, the opinion is entertained that the exports for the present fiscal year will not fall below those of last year more than ten per centum.

Looking to the importations for the last ten years, it may be safely stated that the ratio of annual increase has not been less than ten per centum; though, within that period, there were two years in which there was a falling off. This was attributable, doubtless, to tempo-

rary causes which do not affect the general proposition.

The foreign merchandise subject to duty imported during the first quarter, ending 30th September last, of the present fiscal year, by the statement marked 3, amounted to \$88,819,385; and the customs received during that quarter were, as stated in the estimates, \$18,573,729 37. The tariff of the 3d of March last having gone into operation on the first day of that quarter, the circumstances under which a considerable portion of that amount was realized were so exceptional as to form no satisfactory guide for the remaining three quarters of the present fiscal year; and it becomes an important consideration, in view of the probable means in the treasury to meet existing appropriations, to approximate the amount of merchandise subject to duty which will be entered for consumption during that period.

In making the estimates herewith submitted, the amount of merchandise subject to duty imported during the corresponding three quarters of the last fiscal year were taken, being \$210,000,000, to which ten per centum was added for the annual increase, had there been no disturbing causes—giving for the amount of merchandise paying duty, under the then existing tariff of 1846, an aggregate of

\$231,000,000.

The inquiry now presents itself, To what extent will this approximated amount of merchandise paying duty be diminished by the re-

vulsion which has come upon the country?

An answer to this inquiry constitutes the most serious difficulty in the way of making an estimate of the receipts into the treasury from customs. Looking, however, to our probable exports, the great resources of our country, its unexampled prosperity in many branches of industry, its capacity to recover from temporary pressure in its trade and business, the opinion is expressed, with some confidence, that the reduction from this cause will not exceed twenty-five per centum. This would bring the amount of merchandise paying duties down to about one hundred and seventy-four millions for the remaining three quarters of the present fiscal year. For several years the average rate of duty upon all dutiable merchandise, by the tariff of 1846, appears to have been within a fraction of twenty-five per centum, which would produce on that amount forty-three millions of dollars.

The next point of inquiry is, How much will this sum be diminished by the reduced rates provided by the act of March 3, 1857?

From the calculations made of duties under that act upon the im-

portations of the last fiscal year, compared with the amount of duty actually realized under the tariff of 1846, it appears that about one quarter should be deducted for the effect of the tariff of 1857. Ten millions of dollars have, therefore, been deducted on that account, making the probable receipts from customs, during the remaining three quarters of the present fiscal year, thirty-three millions, which has accordingly been placed in the estimates.

It will, of course, be understood that the returns of dutiable merchandise, from which these inferences are drawn, are of merchandise imported, while the customs revenue is exclusively derived from merchandise entered for consumption. In these estimates the amount of merchandise imported is supposed to equal the amount entered for consumption. In periods of commercial difficulty, like the present, the amount of merchandise imported and placed in warehouse without payment of duty will, no doubt, exceed the amount entered for consumption; but such excess is generally temporary, and is soon obviated by diminished importations and increased withdrawals for consumption, which restores the equilibrium without giving occasion for the discussion of such details in any general statement of the revenue.

The receipts from customs for the next fiscal year, from July 1, 1858, to June 30, 1859, will depend in a great measure upon the extent to which commercial and monetary transactions shall have returned to their ordinary channels. It is probable that the immediate effects of the present revulsion in trade will have ceased by that time, and that the usual amount of dutiable merchandise will be required for consumption. The estimate submitted is based on the amount of three hundred and seventy millions of dutiable merchandise, being the amount assumed for the present fiscal year with the usual increase, and without any deduction for the effects of the present revulsion. Upon this amount the customs, under the act of 1846, with the deduction heretofore explained for the effect of the tariff of 3d March last, would produce about sixty-nine and one-half millions of dollars.

The annual estimates in detail, as prepared by the Register of the Treasury, are presented separately by this department. These estimated expenditures are divided into three classes:

1. Balances of unexpended appropriations which may, and probably will, be required by the respective departments in the course of the next fiscal year.

2. Expenditures under indefinite and permanent appropriations. In this class was placed the standing appropriation made by the joint resolution of February 14, 1850, of \$2,450,000 for expenses of collecting the customs. It is proposed to change this permanent appropriation for annual appropriations of increased amounts, for reasons set forth in another part of this report. In the meantime, as the proposition has not been sanctioned by Congress, the estimate remains in this class.

3. In the third class are comprised the estimates submitted by direction of the several executive departments, as necessary to be appropriated to carry on the several branches of the public service in their charge for the next fiscal year. These three classes comprehend the estimated expenditures for the fiscal year ending June 30, 1859, as

set forth in this report. Neither these estimates, nor those for the remainder of the present fiscal year, include any provision for deficiencies, or other objects which the several departments may ask for during the present session, nor for any expenditure whatever, which may arise out of the original action of Congress during the session. To meet such additional expenditures as may be required from these sources, further means must be provided.

The efficiency of the public service, as well as the security of the public credit, requires that this department shall be provided with means to meet lawful demands without delay. During the remainder of the present fiscal year, it is estimated, as before stated, that sufficient revenue will be received in the course of the year to meet the ordinary outstanding appropriations. But the great bulk of the revenue being derived from duties on merchandise payable only when it is entered for consumption, the period when such duties will be realized is entirely uncertain, being left by law to the option of the importers during three years. The present revulsion has caused a very large portion of the dutiable merchandise imported since it commenced to be warehoused without payment of duty. To what extent this practice will be pursued during the present fiscal year is too much a matter of conjecture at present to risk the public service and the public credit upon the probability of an immediate change in this respect. It may be safely estimated that, in the course of the present fiscal year, a large portion of the merchandise now in warehouse will be withdrawn and duties paid thereon; but, in the meantime, adequate means for meeting lawful demands on the treasury should be provided.

Such provision should be made at the earliest practicable period, as a failure of sufficient means in the treasury may occur at an early day. The exigency being regarded as temporary, the mode of providing for it should be of a temporary character. It is, therefore, recommended that authority be given to this department by law to issue treasury notes for an amount not to exceed twenty millions of dollars, payable within a limited time, and carrying a specified rate of interest, whenever the immediate demands of the public service may call for a greater amount of money than shall happen to be in the treasury.

subject to the treasurer's drafts in payment of warrants.

The fact that such temporary exigency may arise from circumstances beyond the foresight or control of this department, makes some ade-

quate provision to meet it indispensable to the public security.

Previous to the passage of the act of March 3, 1849, which requires all money receivable from customs and other sources to be paid into the treasury without abatement or diminution, the whole expenses of collecting the revenue from customs were defrayed from the moneys collected, and the balance only was paid into the treasury. The expenses of collecting the customs in California and Oregon were excepted from the operation of that act by the third section of the act of September 28, 1850, and the mode of defraying the expenses of collection, which existed previous to the act of March 3, 1849, has been consequently continued at the custom-houses on the Pacific coast up to the present time.

The joint resolution approved 14th February, 1850, makes a permanent appropriation for the expenses of collecting the customs of one million two hundred and twenty-five thousand dollars for each half year, together with such sums as may be received for storage, &c., until Congress shall act upon the subject. During the first four years of the operation of the act of 3d March, 1849, the expenses did not equal the amount of this appropriation, and a considerable balance had accumulated, which has enabled this department to defray the expenses of the last four years, which have considerably exceeded the amount so appropriated, as is shown by statement marked 4.

This accumulation having become entirely exhausted, this department will not be able longer to defray the expenses of collecting the

customs unless Congress shall now act upon the subject.

In order that this important branch of the public service may be conducted with promptitude and efficiency, I recommend that Congress shall, at its present session, legislate upon this subject, to operate from the 1st of January, 1858, which will put an end to the permanent ap-

propriation under the joint resolution from that date.

For the fiscal year ending the 30th June, 1857, the expenses of collecting the customs considerably exceeded three millions of dollars, exclusive of those of the ports on the Pacific coast, which amounted to nearly half a million, as shown by statement marked 5. For the half of the current fiscal year, extending from 1st January to 30th June, 1858, at least one million six hundred thousand dollars will be required to defray these expenses in the Atlantic States, and I recommend that sum to be appropriated for that period.

The reasons which originally led to the exception of the custom-houses on the Pacific coast from the operation of the general law of 1849 no longer exist in the same force as formerly, but the system cannot be suddenly changed without much inconvenience. I propose that, during the remainder of the current fiscal year, these expenses be defrayed, as heretofore, out of the accruing revenue; but, from the commencement of the fiscal year on the 1st July, 1858, that provision be made by law that the whole receipts from customs and all other sources on the Pacific coast be paid into the treasury under the act of 1849, and the expenses of collection be defrayed out of appropriations for that purpose. To meet the expenses of collecting the customs throughout the entire United States during the fiscal year ending 30th June, 1859, will probably require \$4,000,000.

The statement before referred to shows the progressive increase of these expenses, from year to year, since the passage of the act of 1849. It also shows a corresponding increase in the amount of merchandise imported and duties paid. But the latter are not sufficient to explain so large an addition to the expenses of collection, as nearly the same number of officers are required to collect the smaller as the larger amounts. Other causes have largely contributed to swell these expenses. When the public revenue happens to be abundant, many projects are listened to and adopted by Congress without careful regard to the burdens they may permanently impose. The building new revenue-cutters, not needed for the enforcement of the revenue laws; the multiplication of ports of entry and ports of delivery, for

local and temporary convenience, at points not required for the collection of the revenue; and the erection of expensive buildings for officers of the customs and other public officers, are of this class. The original outlay for these projects is usually provided for by special appropriations, and their amount is the principal object that attracts But, under the existing system, every one of these appropriations of necessity imposes an additional and permanent charge upon the expense for collecting the customs. New revenue cutters must be equipped, kept in repair, provided with officers and men, and maintained in a state of efficiency at a large annual charge upon the expenses for collecting the customs, that they may be in constant readiness to relieve vessels in distress, or perform some other duty equally remote from their appropriate and legitimate functions of enforcing the laws. New ports of entry or of delivery created by law, at points remote from the ordinary channels of direct foreign commerce, must be provided with officers paid by annual salaries or other emoluments, as expenses of collecting the customs. New buildings must be furnished, warmed, lighted, and kept in a state of repair and cleanliness, under the direction of suitable officers with proper com-All charges of such character are now defrayed out of the appropriation for the expenses of collecting the custom's. While the public revenue has recently rapidly diminished, these charges are daily increasing in amount.

The public debt on the 1st July, 1857, was \$29,060,386 90. Since that time there has been paid the sum of \$3,895,232 39—leaving the public debt at this time \$25,165,154 51. Since the 3d March last, there has been paid of the public debt \$4,878,377 53. The details are shown by the statements marked 6, 7, and 8. The department continued the purchase of stock as long as the law and a proper regard for the public interest would justify. The object was to redeem, as far as possible, our outstanding debt which had a number of years to run, whilst the payment of the large sums from the treasury required for this purpose was affording relief to the commercial and other interests of the country, which were then struggling to ward off the revulsion which finally came upon them. At that time it was not seriously apprehended that the revulsion would so greatly affect the trade and business of the country; but, looking even to the most unfavorable result that could happen, it was thought that the treasury, if compelled to resort to a loan to meet any temporary deficiency that might occur, would suffer no injury from having the character of the loan changed from debts falling due at a distant period to treasury notes, at a less rate of interest, and which could be redeemed at the

pleasure of the department.

A revulsion in the monetary affairs of the country always occasions more or less of distress among the people. The consequence is, that the public mind is directed to the government for relief, and particularly to that branch of it which has charge of its financial operations. There are many persons who seem to think that it is the duty of the government to provide relief in all cases of trouble and distress. They do not stop to inquire into the power which has been conferred by the people upon their agents, or the objects for which

that power is to be exercised. Their inquiry is limited to the simple fact of existing embarrassments, and they see no other agency capable of affording relief, and their necessities, not their judgements, force them to the conclusion that the government not only can, but ought to relieve them. A moment of calm reflection must satisfy every one that such is not the true theory of our government It is one of limited powers, to be exercised for specified purposes. Its operations, political and financial, should be conducted within these prescribed limits in that manner that it will most certainly effect the object for which the power was conferred. In doing this it should be the policy, as it is unquestionably the duty, of the government so to conduct its affairs as to confer the greatest good upon the greatest number of the people. This misapprehension of the powers and duty of the government has led to the suggestion of measures of relief, which have been pressed with such earnestness upon this department as to demand a brief consideration of them. A private individual who finds that his income is reduced, at once feels the propriety of bringing his expenditures within his reduced means. The suggestion to such a person to increase his expenses would instantly be rejected. To characterize such advice as folly would not be considered harsh or unjust. The estimates of receipts into the treasury for the present fiscal year exhibit the fact that the income of the government will be considerably reduced. In this state of things it is seriously urged that our expenditures should be increased for the purpose of affording relief to the country. Such a policy would doubtless furnish employment to large numbers of worthy citizens. It would require the use of large amounts of money, to be raised either by a loan or the issuing of treasury notes, and would thus afford temporary relief to the country to an extent limited only by the discretion of the government in this unauthorized use of the public treasure and credit. But where shall we look for the power to do this in the Constitution? What provision of that instrument authorizes such a policy? The absence of a satisfactory reply to these inquiries is an unanswerable argument to the suggestion. In the discharge of its legitimate functions the government is required to expend large sums of money in the building of vessels-of-war; the erection of custom-houses and other public buildings; the preparation of the defences of the country, and in a variety of other ways, which give employment to labor, and draws from the treasury the money which has been collected from the people for these There might and would be just cause of complaint if the government, under the pressure of either an imaginary or real monetary crisis, should suddenly stop these extensive operations, and by throwing large numbers of employees out of service add to the distress and suffering which the revulsion had already created. Being engaged in the prosecution of necessary and legitimate works for the public service, it would be the policy and duty of the government to continue their prosecution, even though it should occasion the necessity of increasing its available means by some extraordinary measure. The discontinuance of such works has not been and is not now contemplated, and to this extent the country may look with propriety to the operations of the government for relief. There are other public works of

less necessity, which for a variety of causes have not been commenced. A temporary postponement of them will violate no existing contracts; will deprive no one of employment to which he is authorized to look; will inflict no wrong upon any portion of the people; but will enable the government to realize its means in advance of its expenditure of them, and perhaps avoid the necessity of increasing the public debt. A system of public economy, regardful alike of the just claims of the people and the protection of the treasure and credit of the government, must command the approval of the country; and it is upon such principles it is proposed to conduct the financial department of the government in the present crisis.

As a measure of relief to the country, it is proposed to increase the tariff. A return to a high protective system is regarded by some as the surest mode of extricating the country from its embarrassments, and affording immediate as well as permanent relief to the public distress. The people are already suffering from distress, and the proposition seeks to diminish their suffering by adding to their burdens. The earnestness and ability which have been brought to the support of this proposition demand that its merits should be examined with some care; and without attempting an elaborate exposition of a question which has heretofore commanded so much of the public attention, it is deemed proper to refer to some of the considerations which render

the adoption of such a policy unwise and improper.

The theory of the protectionists is this: that under a low tariff the importations of foreign manufactures is encouraged, and, being brought into the country at lower prices than they can be produced, the competition with the domestic manufacturer is ruinous to his business. The remedy is, to raise the duties upon the foreign article to such a point that either it will be excluded, and thus give to the domestic manufacturer the entire home market, or else it will be so increased in price by the additional duty as to enable the domestic manufacturer to receive a remunerating price for his productions. That the effect would be temporarily for the benefit of the manufacturer is conceded, but that the ultimate effect would be alike injurious to him as well as all other interests is equally clear. In looking upon the operation as a measure of relief, we must consider its effects not only upon the domestic manufacturer, but also upon the consumer.

If the increased duty neither diminishes the importations nor increases the price, it is manifest that no advantage has been derived by the domestic manufacturer. If the effect should be to exclude the foreign article, then the domestic manufacturer monopolizes the home market, and commands his own price. The relief he needs is a higher price for his goods, and, as a matter of course, unrestrained as he will then be by the laws of competition, he will so raise his prices as to remedy the evil of low prices of which he had complained. The effect upon the consumer is clear. He must pay the increased price thus put upon the article of consumption. Nor does it stop there. Under the existing state of things, when he has purchased the article he has not only furnished himself with the goods he needed at the reduced price, but at the same time has paid into the treasury the tax required of him for the support of government. The measure of relief pro-

posed by the protectionists increases the price he is required to pay for his goods, and where the foreign article is excluded leaves his tax This deficiency in the revenue must be supplied, and he is called upon to pay it from his other resources. The proposed measure of relief thus imposes upon him these additional burdens, in the increased price of his goods and the additional tax he is required to If, however, the increased duty should not exclude the importation of the article, but simply advance the price to a remunerating point to the domestic manufacturer, the effect upon the consumer would be to require him to pay the additional price, not only upon the foreign article, but also upon the domestic manufacture. amount of taxation put upon him for the benefit respectively of the treasury and the domestic manufacturer will depend upon the relative proportion of the foreign and domestic article he may consume. In no event can the increased duty operate to the advantage and relief of the manufacturer except by a corresponding injury to the consumer. The amount of benefit conferred and injury sustained by the proposed relief measure would depend upon the relative number of manufacturers and consumers of the articles upon which the increased duties were laid; and as the number of consumers exceed the number of manufacturers, so would the injury sustained exceed the benefit con-A policy so partial and unjust in its operations cannot command the approval of the country.

Regarding the suggestion as a proposition to return to the protective system, it is obnoxious to all the objections which have been here-

tofore so forcibly and successfully urged against it.

The day has passed in this country for increasing restrictions upon commerce, and it is hoped that the same remark will soon be applicable to all other countries. We are accustomed to look to the amount of our exports and imports as evidences of our growing wealth. encourage commerce, enlarge its operations and extend its limits, have been regarded by all portions of our people as objects worthy of their united efforts. One branch of commerce cannot long exist without the co-operation of the other. We cannot expect to furnish the world with our cotton, breadstuffs, tobacco, rice, and other productions, unless we are willing to receive in return their productions. There must be mutuality between nations as between individuals. If a policy is to be adopted by which the productions of other countries are to be excluded from ours, for the benefit of the domestic producer of such articles, justice to other interests demands that there should be adopted a policy by which the producers of our present exports should also be furnished with a market for the fruits of their industry. To do this is impracticable; not to do it would be unjust.

How strangely inconsistent is the doctrine of the protectionists with the practice of the government. We annually expend large sums of money in maintaining a navy, whose chief duty it is to give protection to our commerce in all parts of the world. Appropriations are asked and freely given to send our flag in search of new avenues for

our increasing trade.

The American officer who returns to his country to announce the successful terminations of his mission, in having made new and favor-

able commercial treaties, is hailed as a public benefactor, and all classes unite in doing him honor. In these demonstrations no one participates more cordially than the protectionists. If, upon the announcement of the discovery of a new country which promised a large and lucrative commercial intercourse with our own, it should be simultaneously proposed to impose upon that commerce restrictions that would close our ports to the entry of its productions, under the false theory of protecting home industry, what would be the judgment of an enlightened public opinion upon the wisdom of a people who first expended their treasure in discovering new marts of trade, and immediately denied themselves all the promised benefits to be derived from it? In the case supposed, the proposition would be more startling, but not more unreasonable, than when applied to our intercourse with those countries between whom and ourselves a commerce has grown up from small beginnings to its present large dimensions. This has been accomplished through a policy inaugurated by our own government, and which has commanded the approval of enlightened minds throughout the world. Other countries have, in their legislation of late years manifested, by reducing their duties upon imports, a desire to co-operate in the work of throwing off those shackles upon the freedom of commerce which false theories have placed upon it. It would present a strange spectacle if the United States should be the first to commence a retrograde movement.

The sentiment among our people in favor of free commercial intercourse is manifested in their domestic as well as foreign policy. The strong feeling in the public mind for the extension of our territorial limits is generally attributed to the desire for more land. That it operates to some extent is freely admitted; but such a cause fails in its application to those cases where the acquisition of new territory brings with it no proprietary title to the land. And yet the public sentiment for acquiring territory, where every foot of it is held by private titles, is as decided as in any other case. It is accounted for satisfactorily only upon the theory that, as our territorial limits are extended, we enlarge the area of free trade, opening new markets for the productions of our industry, untrammelled with those restraints

which a restrictive international policy has imposed.

It is an error to suppose that the occasional revulsions which have so seriously affected our manufacturing interest is attributable to the want of a high protective system. In the policy which the government has adopted of allowing many of the raw materials used by them to come in, either free of duty or at low duties, in the incidental protection which a tariff laid for the purpose of revenue gives them—in the increasing consumption of their productions, brought about by the general prosperity of the country, they will find the most ample encouragement that could reasonably be expected or desired. Like all other interests in the country, they suffer from the too frequent changes of the tariff, and from those fluctuations in business which flow from causes wholly distinct and separate from the tariff question. What they need is steady prices, a sound currency, and protection against the ruinous effects of expansions in the credit system. From a free and unrestricted commerce with the world, no interest in our

country would derive a more certain and permanent benefit than the manufacturers.

Rejecting the proposition to raise the tariff as a measure of relief, and looking to the probable receipts and expenditures for the present and next years, no change is recommended in the act of March 3, 1857, at this time. The present tariff is not regarded as perfect; far from it. It has, however, been in operation less than six months—a length of time too short to judge of its workings, even under the most favorable circumstances. This fact, in connexion with the revulsion in business, makes it wholly impracticable to form a correct judgment upon its merits. There are changes which should be made as soon as it can be done with propriety. A return to the decimal division in the rates of duties, a more accurate classification of various articles, and other amendments, would greatly improve the law, even if it should be found by experience unnecessary to make any radical change in its general provisions. The propriety of postponing any action upon the subject, until an opportunity has been offered of testing its general merits, seems to admit of no serious doubt.

Returning to the question of relief which is expected from the government, it becomes necessary to inquire into the cause of the present revulsion, as preliminary to the consideration of a proper remedy for it. Public opinion generally holds the banks responsible for all our embarrassments. The true cause is to be found in the undue expansion of the credit system. The banks constitute an important part of that system; but there are other elements entering into it, which, equally with the question of the banks, demand public con-

sideration.

Credit, confined to its legitimate functions, is the representative of capital, and when used within that limit, may extend and invigorate trade and business; when it ceases to be such representative, it stimulates overtrading, excites speculation, and introduces an unsound state of things in the business of the country. It is this undue expansion of credit which has brought the country to its present embarrassments. The extension of bank credits and the over-issue of bank notes, is a part, and a very important part, of this undue expansion. speculation being created, a demand is made upon the banks for the use of their credit, and yielding to the pressure, they respond by the increased issue of their notes and by enlarging their discounts. extent to which the banks have enlarged their credit beyond its proper limits is not to be measured alone by the amount of their circulation. At the time the New York city banks suspended specie payments in October, they reported a larger amount of specie in their vaults than their notes in circulation, and, notwithstanding this fact, they were unable to meet the demands of their creditors promptly with specie, owing to their credit operations under their deposit system. Having extended their own credit, and enabled their customers to do the same, they were unprepared for the revulsion which came upon them. If it be true that our embarrassments have been occasioned by the cause here assigned, we must look beyond the action of the banks, to the operations of other corporations as well as individuals, to fathom the entire cause of our difficulties. The limits of this report will not

admit of a detailed examination of this subject, but a solitary illustration will present the subject in its proper light. In answer to a circular letter addressed to the various railroad corporations of the country, the information contained in table No. 9 has been obtained. It appears from this statement that the capital of these companies amounts to \$491,435,661, their indebtedness to \$417,243,664. The annual interest upon the latter sum is \$25,093,203, their annual income was \$48,406,488.

It is proper here to remark, that this statement is not entirely accurate; some of the companies failed to respond to the circular of the department, and in such cases, the returns made by them during the preceding year, and contained in the last report of my predecessor, have been used in the preparation of the table. Whilst it cannot, therefore, be considered as perfectly accurate, it approximates it sufficiently near for the illustration of my argument. It exhibits the extent to which this class of corporations has contributed to that expansion of credit which is properly chargeable with the recent revulsion. It is due to a large class of our railroad companies to state that this excessive indebtedness is not equally distributed among them. Some have conducted their business with the utmost propriety and success, whilst others have so far exceeded these limits as to present the foregoing aggregate result of railroad operations in the United States.

The undue expansion of credit, which stimulated in some an eager desire to borrow, and in others a willing disposition to lend, which engendered schemes of improvident speculation, leading to rapid fluctuations in prices and habits of extravagance, I regard as the principal cause for the embarrassment existing in the commerce of the The only efficient remedy for such evils is to be found in a return to the prudent courses and steady habits which, for a time, were unhappily laid aside. This government could do but little toward extricating individuals, corporations, or communities from the pernicious consequences of their extravagant expenditures or ill-conceived enterprises. When credit has been extended so far beyond the bounds of legitimate confidence as to create a revulsion in trade, occasioning a fall of prices, and a destruction of private credit, a speedy adjustment of the relations between creditor and debtor by liquidation and settlement is the surest mode for the restoration of the equili-

Wild and chimerical speculations will thus have their termination, industry will be better enabled to realize its sober expectations, and the substantial interests of society, being relieved from the noxious influence of excitement, overaction, and disorder, will resume their accustomed energy in communicating a healthful and vigorous activity to the business of the country. The proper agency of the government in such a case is to remove whatever impediment may exist to the exertion of the native force of society, and to extract from the experience they have gained lessons to be embodied in wholesome and well considered laws to prevent the recurrence of the evil.

It is evident that the great moneyed corporations created under the laws of the States have had a controlling influence in the undue

expansion of private credit. In many of the States the legislation in respect to these is stringent, and embodies many of the safeguards

that experience has suggested for their regulation.

But it will not be denied that this legislation has been nugatory. The State authorities have already manifested an eager disposition to relieve them from the penalties they have incurred, and to dispense, as far as they were able, with the performance of the obligations they had exacted from them when they were organized. This has been done, in some cases, without an inquiry into their condition or management, or their capacity to resume their position as solvent institutions, or even to protect the community from a depreciated paper currency.

In my judgment, the period has arrived for Congress to employ the powers conferred by the Constitution upon it to mitigate the present evil, and to prevent a catastrophe of a similar kind in future; and for this purpose a compulsory bankrupt law, to include two classes of corporations and companies, is necessary. It should be a law for the protection of creditors, not the relief of debtors; to prevent improper credit, not to pay improvident debts; compulsory, not voluntary. The effect of such a law would be felt more in its restraining influence

than in its practical execution.

I do not recommend a law similar to either of those which have heretofore existed, and were abandoned after a short and unsatisfactory experience. The first was adopted the 4th April, 1800, and was repealed the 19th December, 1803. It provided for a compulsory process of bankruptcy against those merchants and commission agents, at the suit of creditors, whose insolvency had become manifest by certain overt acts of fraud or defalcation, and effected a collection and distribution of the estate of the bankrupt through the judicial tribunals of the United States, which was followed by his discharge from the debts his estate had not satisfied. The second act was passed 12th August, 1841, and was repealed the 3d March, 1843. This act, besides the compulsory system of the act of 1800, contained a system of bankruptcy, to be applied on the petition of an insolvent debtor, of any class or profession, and to result in his relief from his debts and engagements, upon the surrender of his property and compliance with other conditions of the act.

There are grave objections to the present adoption of the systems developed in these statutes. The voluntary feature of the act of 1841 is rejected as unwise, unjust, and unnecessary. It was this provision which rendered that law so justly odious in the public mind. Nor do I propose to extend the provisions even of a compulsory bankrupt law to the numerous cases covered by the act of 1841. It is better to leave to the operation of the insolvent and bankrupt laws of the several States all cases which do not, from their magnitude and importance, affect the general commercial and business interests of the country. It is believed that the power of the States is ample to meet such cases, and the propriety and policy of exercising such powers will, sooner or

later, be developed by the lessons of bitter experience.

The two cases which it is now proposed to bring under the operation of a compulsory bankrupt law are banks and railroad corporations. The immense capital employed by these companies, their controlling power and influence in the commercial and business operations of the country, their disposition to expand and enlarge their credit, and the ruinous effects produced by their operations when carried beyond legitimate bounds, impose upon the government the duty of providing, by every constitutional means in their power, for the safe, proper, and legitimate conduct of such corporations. The facts which are presented in other portions of this report, developing the condition and operations of these two classes of corporations, will fully justify the policy now recommended. The object is not to injure them, but to protect the community. The effect will be to restrain their operations within proper limits, and thereby insure to the country all the benefits they are capable of conferring, without the accompanying hazards of wild speculations and ruinous revulsions.

In closing my observations on this subject, it is proper to state that these recommendations are not formed in any spirit of hostility to these corporations and companies, nor am'I insensible of their vast importance in the commercial system of the United States. Nor have I any disposition to denounce any punishment, nor to subject them to any loss, in the present conjunction of their affairs. My object is to place them in subjection to wholesome laws, so that, while the benefits they yield to the community may be preserved, their excesses or errors

will be counteracted or prevented.

The details of any act, formed on the principle I have suggested, should be adopted after an enlarged inquiry into their condition, and should embody the most liberal provisions for the security of the rights of the persons interested in them. A reasonable time should also be allowed to the corporations which are now in default to re-

establish themselves before this act becomes operative.

During this financial crisis and general derangement of the currency, the collection and disbursement of the public revenue have proceeded without loss or embarrassment. The operations of the independent treasury system, in ordinary times, had been found by experience eminently successful. The danger of loss from unfaithful and inefficient officers, the expense of conducting its operations without the intervention of bank agencies, its deleterious effects upon commercial progress and the general business of the country—all of which was apprehended by the opponents of the measure at the time of its adoption—have been demonstrated to be unfounded. It only remained to encounter a commercial crisis like the present to vindicate the justice and wisdom of the policy against all cause of complaint or apprehension. A brief comparison of the operations of the Treasury Department during the suspension of 1837 and the present time will place the subject before the public mind in the most satisfactory manner.

On the 30th June, 1837, immediately after the general suspension, the deposit banks held to the credit of the Treasurer of the United States, and subject to his draft, the sum of \$24,994,158 37—a larger amount, in proportion to the receipts and expenditures of the government, than there was in the treasury at the time of the suspension by the banks the present year. The funds of

the government being then under the control of the banks, and they either unwilling or unable to pay, the government was placed in the anomalous condition of having an overflowing treasury, which it was seeking to deplete by distribution or deposits with the States, and yet unable to meet its most ordinary obligations. It had either to make its payments and deposits in the depreciated currency which suspended banks forced upon the country, or postpone their payments until, from its credit or other ordinary resources, it could command the means for that purpose. It is unnecessary to detail the expedients to which the government was forced to resort at that time. The embarrassment consequent upon this state of things will be remembered by those who participated in the scenes of that day. It will be realized by every one from this brief presentation of it. The effort of the government to withdraw its deposits and get control of its funds was felt as an additional blow aimed at the banks. Every dollar which could thus be drawn from the vaults of the banks diminished to that extent their ability to afford relief to their customers. Their loans had to be contracted, and the demand made by them upon their debtors for settlement increased the pressure already felt in the money market, and thereby added to the general panic and want of confidence, which are the usual attendants of a monetary crisis. The government was not only embarrassed for the want of its money, but in the effort to obtain it became obnoxious to the charge of adding to the general distress, which many persons thought it was its duty to relieve. To avoid a recurrence of these difficulties, the plan of separating the government from all connexion with the banks was suggested, and in 1846 was permanently adopted. The result is before the country in the occurrences of the last few weeks. The banks, as in 1837, have suspended specie payments, but the analogy ceases there, so far as the operations of the Treasury Department in its disbursements are concerned. The government has its money in the hands of its own officers, and in the only currency known to the Constitution. It has met every liability without embarrassment. It has resorted to no expedient to meet the claims of its creditors, but with promptness pays each one upon presentation. If the contrast between the operations of 1837 and the present time stopped here, it would be enough to vindicate the policy of the independent treasury system; but it does not. The most remarkable feature distinguishing the two periods has reference to the effect upon the commercial and general business interest of the country produced by the present operations of the independent treasury. It is the relief which has been afforded to the money market by the disbursements in specie of the general government. 1837, the demand of the government for its funds, with which to meet its obligations, weakened the banks, crippled their resources, and added to the general panic and pressure. In 1857, the disbursements by the government of its funds, which it kept in its own vaults, supplied the banks with specie, strengthened their hands, and would thus have enabled them to afford relief, when it was so much needed, if they had been in a condition to do it. Their inability or unwillingness to do so, under such favorable circumstances, only shows how much worse the embarrassment would have been if the government

was now demanding payment from them, instead of furnishing them the means of relief.

At the time, and subsequent to the passage of the independent treasury act of 1846, the greatest apprehension was expressed, and no doubt felt, by its opponents, of the effect of such a policy. The accumulation of specie in the vaults of the government, the distress it would occasion in the collection of the public dues in specie, and particularly its operations in a monetary crisis, were regarded as certain sources of inevitable evil. The idea that it would afford relief at such a time was looked upon as wild and visionary by its opponents, and not very confidently anticipated by its friends. The success of the policy should be as gratifying as it was unexpected to those who resisted its adoption with so much zeal and ability.

Whilst the opponents of the system apprehended from it the most ruinous effects upon the banks and the currency, its friends looked confidently to its operation for a wholesome check upon excessive issues by the banks. Experience has shown that the apprehensions of the one were groundless, and the anticipations of the others were well-founded, to a limited extent. The increase of the circulation of the banks at the time they were used as public depositories, compared with their circulation at other periods, and particularly since the adoption of the independent treasury system, affords the most satisfactory evidence of the restraining influence of the system upon the tendency of the banks to extend their credit and increase their issues. It is impossible to estimate with accuracy the extent of this influence. There are so many elements which enter into the financial operations of a great and extended country like ours, that no man can pretend to analyze the many causes at work with a view of assigning to each its separate and legitimate effect. No one doubts, however, that the effect of collecting the public revenues in the notes of the banks, and depositing the funds when collected with them, would be an extension of the credit of the bank, and an addition to their circulation proportioned to this increased demand for the use of their notes. To the extent that this stimulant to credit has been withheld, to that extent, certainly, has the restraining influence of the independent treasury upon excessive bank issues been felt. The collection annually of about \$70,000,000 in the notes of banks, and a large amount at all times remaining in their vaults as deposits, would afford facilities for extending their credit, which the past history of these institutions show they would not nesitate to avail themselves of. If such a system had prevailed for the last ten years, the strong probabilities are that the present crisis would have been much sooner reached, and the effect would have been more disastrous, because more extended, and with fewer sources of relief.

If the beneficial effects of the independent treasury system in restraining the banks from extending their credits have not been overestimated, and it is confidently believed that they have not, it is respectfully submitted to public consideration whether the adoption of the same principle by the respective State governments would not complete the work of reform and prevention against bank suspensions, so happily inaugurated and successfully practised by the general gov-

ernment. The various State governments now collect annually about \$50,000,000. This amount is collected mainly in bank notes, and, when not immediately disbursed, is either kept in the form of bank notes in the vaults of the State treasuries, or deposited directly with the banks. Let the several States collect their revenues in specie, and thence is withdrawn from the banks a stimulant to overbanking to the extent of the facilities now afforded them by this use of their notes.

The remarks already made in connexion with the independent treasury of the general government are here applicable to the effect that would be produced by such a policy. The collection and disbursement in specie of the revenues of both the general and State governments, not to speak of the various city, town, and county corporations, would constitute such a demand for specie, at all times, as to require its retention in the country. The banks, knowing that they were liable to furnish their note-holders with this specie, would regulate their issues accordingly, and would consequently be restrained from excessive overissues, which render suspension of specie payments by them inevitable when a crisis comes, which requires them to do what they ought always to be ready to do-pay their debts. The apprehension that such a requirement by the State governments would operate oppressively upon the people, would prove as unfounded as it did in the case of the general government. State taxes are now paid. most generally, in bank notes. These notes profess to be the representatives of specie. If they are, the tax-payer could easily convert them into specie. If they are not, then they ought not to be received as such either by the State governments or the people. The very object of the law is to guard against the latter contingency, and thus to secure to the country a sound paper currency, always convertible into specie.

Under the operation of an independent treasury system, adopted by each of the States, there would be no difficulty in retaining in the country a sufficient amount of specie, not only for the purposes of the government, but also to secure a sound paper currency. As long, however, as the present system lasts, this result cannot be looked for. One would suppose that the large increase of gold in the last few vears would have enabled the banks to have protected themselves against the necessity of suspending specie payments. Such should have been the case; but it has not been and will not be until some policy, such as is here recommended, is adopted, which will compel them to keep sufficient specie in their vaults to meet their issues. Since the discovery of gold in California, in 1849, there has been coined at the mints of the United States the sum of \$400,000,000, and even a larger amount has been added from that source to the gold of the world. At that time it was estimated that there was in the United States \$120,000,000 of specie. Of that amount the banks held \$43,000,000; upon which they issued a circulation of \$114,743,415. Their deposits at that time amounted to \$91,178,623. It is estimated that there is now in the United States \$260,000,000 of specie, and of this sum the banks have \$60,000,000; upon which they have issued a circulation of \$214,778,822, and their deposits have increased to

It will be seen from this statement that, with the increased quantity of specie in the country, the banks have only increased their specie from \$43,000,000 to \$60,000,000, whilst they have increased their circulation from \$114,743,415 to \$214,778,822. No one supposes that such would have been the case if, during this period, the financial operations of the various State governments had been conducted upon the principles of the independent treasury sys-It is confidently believed that such a policy would have saved the country from the present bank suspension. If, at the time the general government was making its disbursements in specie at the commencement of the present crisis, the same operation had been going on from the different State treasuries, the effect necessarily would have been to have supplied every demand in the country for specie, and the banks, already restrained within legitimate bounds, would have been enabled to have pursued their usual business without serious interruption.

In this connexion, it cannot fail to attract observation, that at the very moment when the general government, through the instrumentality of the independent treasury system, was meeting, with promptness, its liabilities of every character, and by the very act of disbursing its specie funds affording relief to the banks and the country, the State governments, for the want of such a system, were unable, with nominally full treasuries, to pay their debts, and, in the effort to do so, were subjected to the charge of either paying their liabilities in depreciated currency, or adding to the distress of the country by their demands upon the banks for specie funds. These difficulties are the legitimate fruits of their past policy, and for the present must be endured; it will be their own fault if another revulsion should find

them in a like condition.

As an additional restraint upon the tendency of the banks to overissue, as well as for the purpose of keeping an ample supply of specie in constant circulation, the suppression of all bank notes under the denomination of twenty dollars is recommended to the consideration of those under whose jurisdiction these State institutions exist.

Previous to the act of 20th February, 1857, the director of the mint was required by law to make his annual report to the President. By the 7th section of that act he is directed to make his report to the Secretary of the Treasury, to the 30th June of each year, that it may appear in the annual report on the finances. The director has made his annual report to the President for the calendar year to the 1st January last, and has now reported to this department the operations of the mint and its branches during the remaining half of the last fiscal year, to the 30th June last. The report is herewith transmitted, marked 10.

The director calls the attention of this department to the propriety of such an amendment of existing laws relative to coinage, that, where fine gold bars are made and paid to depositors of bullion, in addition to the charges now made for parting and toughening, there shall be a charge of one-half per cent. paid into the treasury thereon, which would have been imposed had the same been coined. By the 6th section of the act of 21st February, 1853, this charge of one-

half per cent. was payable into the treasury, in addition to the charges for refining or parting bullion, whether it was paid to depositors in the form of coin, or in bars, ingots, or disks. But the 6th section of the act of March 3, 1853, chapter 96, provides that the charge for refining, casting, or forming bars, ingots, or disks, shall not exceed the actual cost of the operation. The effect of this provision is to repeal the seigniorage of one-half per cent. imposed equally on bullion coined, or withdrawn in the form of fine bars, by the act of February 21, 1853, and to restrict this duty entirely to coin. This is, of course, equivalent to paying a premium of one-half per cent. upon all bullion exported in the form of fine bars, as it would have been subjected by law to that ourden had it been coined. I concur with the director in the opinion that it is not good policy to impose this half per cent. on all bullion coined for circulation, and at the same time exempt fine bars withdrawn for exportation. If depositors of bullion choose to export it in the form of fine bars, they should be at liberty to exercise that option; but they should not be allowed a premium of one-half per cent. upon such as is withdrawn for exportation, which is the effect of imposing that duty on that bullion which is coined, and exempting, as is done by the section of the act of March 3, 1853, referred to, that which is withdrawn in the form of fine bars. I accordingly recommend that the original provision of the 6th section of the act of February 21, 1853, be restored.

By the act of March 3, 1857, amendatory of "An act to provide for the better organization of the treasury, and for the collection, safe keeping, transfer and disbursement of the public revenue," it was provided "that each and every disbursing officer or agent of the United States, having any money of the United States entrusted to him for disbursement, shall be, and he is hereby, required to deposit the same with the Treasurer of the United States, or with some one of the assistant treasurers or public depositaries, and draw for the same only in favor of the persons to whom payment is to be made in pursuance of law and instructions, except when payments are to be made in sums under twenty dollars, in which cases such disbursing agent may check

in his own name, stating that it is to pay small claims."

The object of this provision of law was to protect the government

The object of this provision of law was to protect the government from the improper use of the public funds in the hands of disbursing officers. It was the desire of the department to carry it out to the fullest extent that it could be done. An enforcement of its provisions according to its letter was impracticable. It would have required a considerable increase of the clerical force of different offices, for which no provision had been made by Congress, and in some of the departments a compliance with its requirements was impossible. Payments by the disbursing officers of the army and navy, as well as payments by a portion of such officers in the Interior Department, could not be made in the mode pointed out. Pursers in the navy settling with the officers and crew of a vessel in foreign ports; paymasters in the army, at remote points from any public depositary; disbursing agents charged with the payment of Indian annuities, could not discharge their duties if a literal compliance with this law had been required. Regarding the object of the law as wise and proper, and feeling bound

to enforce it to the utmost extent in my power, I caused circulars Nos. 2 and 3, appended to this report, to be issued to the various public depositaries and disbursing agents of this department, by which it will be seen that the object of the law has been carried out, and in the mode prescribed, as far as it was possible to do so. It is believed that the regulations thus adopted, will effectually secure the object which Congress had in view in the passage of the act of March 3, 1857, and I would recommend that the law be so amended as to conform to these regulations. At all events, some legislation is absolutely necessary on the subject, and I would ask the early attention of Congress to it.

The sum of two thousand five hundred dollars was appropriated at the last session of Congress "to enable the Secretary of the Treasury to cause such experiments and analyses of different beds of ore as to test whether any of such ores, in their native state, possess alloys that will resist the tendency to oxydize to a greater extent than others, and to ascertain under what circumstances they are found, and where, in order to facilitate the proper selections of iron for public works." To carry out the object in view, I caused circulars to be sent to all ironmasters whose names could be ascertained, soliciting specimens of ore and iron, and calling for information pertinent to the subject, and, in compliance with the request, already a large number of specimens have been received and are being received daily. The specimens are accompanied by letters manifesting great interest in the result, and communicating much valuable information in relation to the production of iron, which has become one of the great national industrial So soon as the specimens are all received and arranged, and the information which accompanies them has been abstracted and collated, a competent chemist or metallurgist will be employed to make the experiments and analyses. Conclusive evidence has already been received that a decided difference in the susceptibility of different irons to oxydize does exist, and it is hoped that the proposed analyses will discover the cause. However, should the experiments fail in this respect, they will at least show the localities from which the least oxydizable iron can be procured. Some idea may be formed of the importance of being able to discriminate between irons as to their susceptibility to oxydize, from the fact that the quantity used by the government, in this department alone, since January, 1852, exceeds 40,000,000 pounds; and the Navy and War Departments may each safely be put down for equal amounts. The use of iron capable of resisting oxygen, for rigging, anchors, chain-plates, sheathing, &c.. in our commercial marine, would be immense.

In accordance with the authority vested in the Secretary of the Treasury, by the joint resolution approved February 26, 1857, to provide for ascertaining the relative value of the coinage of the United States and Great Britain, and fixing the relative value of the unitary coins of the two countries, I appointed Professor J. H. Alexander, of Baltimore, commissioner to confer with the proper functionaries in Great Britain in relation to some plan or plans of so mutually arranging, on the decimal basis, the coinage of the two countries, as that the respective units shall hereafter be easily and exactly commensurable. Professor Alexander is now in London, and I expect the result of his

mission will be embodied in a statement and report from him at an early day, which will be laid before Congress as soon as received.

The joint resolution to prevent the counterfeiting the coins of the United States, approved February 26, 1857, empowered the Secretary of the Treasury to cause inquiry to be made, by two competent commissioners, into processes and means claimed to have been discovered by J. T. Barclay, esq., for preventing the abrasion, counterfeiting, and deterioration of the coins of the United States. Under said authority, I appointed Professors Henry Vethake and R. E. Rogers, of Pennsylvania, and directed every facility to be afforded them at the mint, in Philadelphia, to pursue their investigations. I anticipate, at an early day, to communicate the results of the said inquiry to Congress, with my opinion as to the probable value of the alleged discoveries.

In the settlement of the accounts of the Clerk of the House of Representatives by the accounting officers of the treasury, a question arose as to the power of the two Houses of Congress over their respective contingent funds. Under resolutions passed by the House of Representatives, the Clerk had paid certain sums to different employés of the House for extra services rendered by them, and the question was presented to me whether he could be allowed credit for such payments in view of the provisions of the act of March 3, 1845, which was evidently intended to prevent the application of the contingent fund of the two Houses to such purposes. My opinion was, that the act of March 3, 1845, was still in force in this respect, and I accordingly held that the credits could not be allowed. The reasons for that opinion are so fully stated in my letter of June 30, 1857, to the First Auditor of the Treasury—a copy of which accompanies this report, marked 11—that it is unnecessary again to discuss the question. conformity to the suggestions of that letter, and for the reasons therein given, I recommend the passage of a law for the relief of the parties who have acted under the different construction placed upon the law by this department.

By the act of February 5, 1857, the President was authorized "to procure, by purchase or otherwise, a suitable steamer as a revenue cutter," and for that purpose the sum of one hundred and fifty thousand dollars was appropriated. Under this authority proposals were invited for the building of such a vessel, and the contract awarded to Mr. Wm. H. Webb, of New York. He is progressing rapidly with the work, and it is believed that the vessel will be ready for service by the st of February, 1858. The character of the contractor, and the care and energy which have been displayed so far in the construction of this steamer, justify the opinion that, when completed, it will be a vessel that will do credit to the service. The whole expense of building and equipping the steamer will be within the appropriation made by Congress.

The report of the engineer in charge of the Bureau of Construction is herewith submitted, marked 12. It will give a detailed statement of the expenditures in that branch of the public service. There

are interesting facts set forth in this report which should not fail to attract the attention of Congress. By reference to the tables accom-

panying the report, the number of public buildings erected prior to 1850, and their cost, will be shewn; also the number authorized to be erected since that time, as well as the propositions which have been urged upon Congress for the still further enlargement of the system. In view of these facts, it is submitted that Congress should either return to the practice of the government prior to 1850, or else adopt a system that would do justice to the different sections of the country. If these public buildings are to be erected to the extent indicated by the legislation of the last few years, not only justice to the different sections of the country, but economy and the public interest require that they should be subjected to a system which will guard the public interest against the unwise expenditures likely to be incurred from the present mode of legislating on the subject. No public building should be authorized until an official report has been made to Congress shewing the necessity for its erection and its cost.

The suggestions made in the report of the engineer, on the propriety of systematizing this class of business are commended to the consideration of Congress. Before, however, adopting the late legislation on this subject as the fixed policy of the government, it would be well to consider the expense which such a system will permanently entail upon the treasury. The number of custom-houses, court-houses and post offices which would be called for can hardly be computed with accuracy; but our general information on the subject is sufficient to justify the opinion that it would be attended with an expense which would never be compensated for in any advantages to the public service. My own opinion is decidedly against the system; but if Congress adopts it, I am desirous of placing it upon the most just and

economical principles.

Among the tables accompanying this report, I especially call the attention of Congress to No. 13, giving a detailed account of the expenditures and receipts of the marine hospital fund for the relief of sick and disabled seamen in the ports of the United States for the

fiscal year ending June 30, 1857.

The relief afforded at the hospitals belonging to and under the charge of the government is no greater than at other points, whilst the expense is much larger. This is attributable, in a great measure, to the unwise location of some of the hospitals, though there are, doubtless, other causes which contribute to that result. The propriety of dispensing with these public hospitals, and returning to the system which still exists at most of our ports for the disbursement of the marine hospital fund, is commended to the favorable consideration of Congress.

Having called on the president of the Louisville and Portland Canal Company for a report of its condition, I herewith transmit the response of that officer, marked 14, from which Congress can decide

whether further legislation on that subject is advisable.

The report of the Superintendent of the Coast Survey will be submitted to Congress at an early day. It will give a statement of the operations of that branch of the public service, showing the progress which has been made in it during the last fiscal year. Every

reduction in the expenditures of this service has been made consistent with its prosecution on the present scale.

The reports of the First, Second, Third, Fourth, Fifth, and Sixth Auditors, and of the First and Second Comptrollers, the Commissioner of Customs, and those of the Treasurer, Solicitor and Register of the Treasury, (marked from A to L, inclusive,) are herewith submitted. They give a detailed account of the business transacted in their respective offices.

The report of the supervising inspectors, marked 15, will be found among the documents accompanying this report, and gives the operations of the law under which they are appointed for the past year.

The operations of the Light-House Board, with the condition of the works under their charge, will be found in the report from that body, No. 16.

A disposition on the part of the board to curtail a system which has been extended beyond the wants of commerce should recommend it to the favorable consideration of Congress.

The duties devolving upon those having charge of this branch of the public service have been performed with satisfaction and ability.

All which is respectfully submitted.

HOWELL COBB, Secretary of the Treasury.

Hon. John C. Breckingide, Vice President of the United States and President of the Senate.

MINT OF THE UNITED STATES, Philadelphia, June 30, 1857.

^{*} Coinage operations suspended.

MINT OF THE UNITED STATES, Philadelphia, October 12, 1857.

Sin: I have the honor to submit the following report of the operations of the mint and its branches, including the assay office, from the first day of January until the thirtieth of June of the present year.

Previous to the passage of the act approved February 21, 1857, entitled "An act relating to foreign coins and to the coinage of cents at the mint of the United States," the annual report of the director of the mint was made to the President of the United States in the month of January of each year, and embraced the operations of the mint for the preceding year. But the act of Congress above cited directs that "hereafter the director of the mint shall make his annual report to the Secretary of the Treasury up to the thirtieth of June in each year, so that the same may appear in his annual report to Congress on the finances." As my report in January last presented a statement of the operations for the year 1856, this report will embrace the operations since that time, namely, from the first day of January to the thirtieth of June, a period of six months.

The amount of gold and silver bullion received during the time above stated at the mint and its branches and the assay office was as follows: gold deposits, \$26,513,314 71; silver deposits and purchases, including silver coins offered in exchange for cents of the new issues,

\$4,774,186 16; total deposits, \$31,287,500 87.

The coinage for the same period was as follows: gold coins \$15,811,563; silver coins, \$1,477,000; cent coins, \$63,510 46. Fine gold bars, \$9,371,575 68; silver bars, \$124,644 46. Total coinage, including bars, \$26,848,293 60. The number of pieces of coin struck and of bars prepared and stamped was as follows:

Mint at Philadelphia	18,602,020
Branch at San Francisco	800,500
Branch at Dahlonega	8,830
Branch at Charlotte	$26,\!417$
Assay office at New York	
Branch mint New Orleans, coinage suspended.	, .

Total	• • • • • • • • • •	•	19,440,547

The amount of deposits received at all the mints was \$31,287,500 87, as above stated; but it is proper to note that a portion of the bullion received are re-deposits for coinage. Deducting these re-deposits, the amount of gold and silver received during the period embraced in this report was \$26,109,669 46.

The operations at the several mints and the assay office during the period before stated were as follows: at the mint in Philadelphia, gold deposits received, \$3,700,350 87; gold coins struck, \$3,219,692; fine gold bars made, \$36,161 68. Silver deposits and purchases, including amount received in exchange for cents of the new issues, and also including amount of silver parted from California gold, \$2,585,544 17. The silver coinage executed was \$1,428,327 46;

copper cents of former standard \$3,334 56; half cents, \$175 90; cents of the new issues, the coinage of which was commenced on the 25th of May, the sum of \$60,000. Total deposits, \$6,285,895 04. Total coinage, \$4,747,691 60. The coinage at the principal mint

was comprised in 18,602,020 pieces.

The deposits at the branch mint at New Orleans were as follows: gold deposits, \$151,177 90. Silver deposits, \$1,662,728 13. Total deposits, \$1,813,906 03. No coinage was executed at this branch mint, the operations being suspended on account of the repairs made upon the mint for the purpose of making it fire-proof. These repairs and alterations were completed in July last, at which time the operations at that institution were fully resumed.

The branch mint of San Francisco received of gold deposits the sum of \$12,526,826 93; of silver, the sum of \$24,374, 86. The coinage operations were as follows: gold coins, \$12,490,000; silver coins, \$50,000. Total deposits \$12,551,201 79; total coinage operations

\$12,540,000—comprised in 800,500 pieces.

The branch mint at Charlotte received deposits of gold to the value of \$75,376 47; and its coinage amounted to \$78,965, composed of

26,417 pieces.

The branch mint at Dahlonega received gold deposits to the value of \$39,679 54, and its coinage amounted to \$32,906, composed of 8,830 pieces.

The operations of the branches last named are confined to gold.

The assay office at New York received gold deposits, \$10,019,903; silver purchases and deposits, including silver parted from gold, \$501,539; total deposits and purchases, \$10,521,442. These deposits were paid as follows: In fine gold and silver bars, \$7,862,557; in gold and silver coin, \$2,658,885. Gold bars of the value of \$9,335,414 were prepared and stamped at this office, and silver bars of the value of \$127,317.

The amount of gold of domestic production deposited at all the minting establishments during the period embraced in this report was as follows: from California, \$23,118,176 75; from the Atlantic States, \$151,853 99. Total domestic gold, \$23,270,030 74.

The amount of silver of domestic production, including silver parted from California gold, deposited during the same time, was \$127,256 12.

For the purpose of exhibiting in a condensed form the entire operations of the mint and its branches, I present the annexed summary statement. It embraces the amount of gold and silver bullion operated upon from the time of their respective organizations to the 30th of June, 1857.

Mint of the United States,	established	1793	\$394,805,449	91
Branch mint at New Orleans	"	1838	59,423,415	00
Branch mint at Dahlonega,	"	1838	5,825,747	00
Branch mint at Charlotte,	"	1838	4,463,659	00
Branch mint at San Francisco	, "	1854	71,909,473	93
Assay office at New York,	"	1854	52,191,443	33

Total...... 588,619,188 17

Of this amount there has been received since the 1st of January, 1849, of native gold, the production of the United States, the sum of four hundred and two millions of dollars. If, in addition to this sum, we add the gold produced from Australia and other foreign countries during the same period, which may be stated to be about five hundred millions of dollars, and the production of silver bullion from all sources, which is at the rate of about forty millions per annum, it will be seen that within this comparatively brief period the world's supply of the precious metals has been increased to the extent of twelve hundred and forty-two millions of dollars. In view of this great increase, and of the further supplies which will doubtless, for years to come, be received from the same sources, it may well be considered whether, in a country so highly favored with the production of gold and the supply of silver as ours, some measures should not be adopted by which the people, in like manner with the government, should enjoy the advantages of a specie currency.

I deem it proper to call your attention to the propriety of so amending the laws relative to coinage as to provide that where fine gold bars are made and paid to depositors of bullion at the mint and its branches, and at the assay office, that in addition to the charges now made for parting the metals, and for toughening, there shall be a charge of the one half of one per cent., to be paid into the treasury of the United States, as is provided by the sixth section of the act of February 21, 1853. That section authorized this charge as well upon bars as coin, but the act of March 3, 1853, makes it apply only to coin. There seems no valid reason why this discrimination should be made in favor of fine bars, which are used for transportation abroad

instead of coin.

The tabular statements which are herewith presented exhibit indetail the operations of the mint and its branches for the period embraced in this report, and also for previous years. These tables present the following statistics: The deposits and coinage at the mint and its branches and the assay office, from the first of January to the 30th June, 1857; the coinage operations of all the minting establishments of the United States, from their respective organizations to the 30th of June, 1857; an exhibit of the entire deposits of domestic gold at the mints and the assay office for the same period; a similar exhibit of the production, since the 1st of January, 1841, of domestic silver, including amount parted from domestic gold; a statement of the amount of silver coined since the passage of the act relating to silver coinage, approved February 21, 1853; the amount and denomination of fractions of the Spanish and Mexican dollar, including cents of former issues, deposited at the mint of the United States for exchange for the new cent, during the period embraced in this report; the amount of fractions of the Spanish and Mexican dollar purchased at the mint of the United States, the branch mint at New Orleans, and the assay office, New York, during the same period.

The third section of the act of Congress, cited in the commencement of this report, contains the following enactment: "That all former acts authorizing the currency of foreign gold or silver coins, and declaring the same a legal tender in payment for debts, are hereby repealed; but it shall be the duty of the director of the mint to cause Digitized for FRASER

http://fraser.stlouisfed.org/ Federal Reserve Bank of St. Louis assays to be made, from time to time, of such foreign coins as may be known to our commerce, to determine their average weight, fineness and value, and to embrace in his annual report a statement of the results thereof."

In pursuance of the requirements of this law, I have caused assays to be made of such foreign coins as came within the official notice of the mint, or could be procured at our seats of commerce, or obtained

from other sources.

A strict compliance with the law would require but a brief report, for but few foreign coins are now "known to our commerce," the course of trade leading the precious metals, especially gold, from our shores, and scarcely any comes from abroad, except what may be found in the hands of emigrants and travellers. But the occasion of making the first report under this law is deemed a good opportunity to present to the public, in a reliable and official form, such information respecting the "weight, fineness and value" of such foreign coin as have come under our observation as may be useful, not only to the merchant and statesman and man of business but to the traveller and general reader.

It will be observed that the different countries are presented somewhat in the order of proximity to our own, beginning with Mexico and

ending with the East Indies.

The terms of weight and fineness are those used in the mint. The weight is given in thousandths of an ounce troy instead of grains; the fineness is expressed in thousand parts, now become the general language of assayers. The calculation of the value of large quantities by these forms of expresions is greatly facilitated. The gold values are the equivalent of the gold coinage of the United States according to our legal standard; from which, if the return is desired in stamped bars, there is to be deducted six cents per hundred dollars; if in our gold coin, one-half of one per cent., or fifty cents per hundred dollars. The silver values are based upon the present mint price of 122.5 cents per ounce of standard fineness—namely, 900 thousandths.

The scope which has been taken in respect to the age of the coins is about twenty or thirty years at the most. Where the term new is used, it is to be understood as extending back three or four years only from the present time. By giving double results, namely, of pieces lately issued, and of pieces somewhat worn by circulation, justice is done to the respective mints on the one hand, and to holders of

coin on the other.

With these preliminary remarks, I proceed to notice the coinage of the following countries:

MEXICO.

There are eight or nine mints in this country, one of which is national, while the others are state institutions, having one general law of coinage, but independent of each other, and subject to no general control. There are some characteristic differences in respect to grades of fineness and general accuracy, but they seem not sufficient to call for a distinction, especially as the only external means of identifying is

in the mint mark. The coins are commercially known as Mexican, and there is no further inquiry. Our object, therefore, is to give as

fair an average as can be arrived at.

Gold.—New piece of 8 E., (eight escudos,) usually called a doubloon weight; 0.865 ounces, 871½ fine; value, \$15 58.3. These pieces (from Culiacan and Chihuahua) do not fairly represent either the weight or fineness, being low in the former respect and high in the latter, yet they averge about the usual value. General average, 0.867½ ounce, 866 fine, \$15 53.4. The smaller denominations are four; two, and one escudos.

98 Bilver.—New peso of 8 R., (eight reals,) known as the dollar; 0.866 ounce, 902 fine, \$1 06.3. General average, 0.866 ounce, 904 The \$1 06.2. The smaller sizes are four, two, one, and one-half

realizació

y to preformation

CENTRAL AMERICA.

68 nioo 1 6 Gold. New piece of 2 E., (two escudos,) or quarter doubloon of Gosta Rica, 0.209 ounce 853½ fine, \$3 68. Average of dates, 0.205 ounce, 850 fine, \$3 60.

-There is also a piece of four escudos, of Costa Rica, (not new,)

which gives 0.434 ounce, 851 fine, \$7 62.

The old doubloon of *Central America*, the latest date of which, so far as noticed here, is 1833, averaged 0.869 ounce, 833 fine, \$14 96.

There were smaller denominations, of later dates, somewhat in proportion as to value, but too irregular to demand a more particular notice. The sizes were the same as in Mexican gold coinage, with the addition of a half escudo, which may be called the gold dollar; this last averaged 83.5 cents.

Silver.—The 8 R. (dollar) of 1840 to 1842 averaged 887 fine; that of 1847, the latest date observed, varied from 820 to 880, the weight being tolerably conformed to the Mexican or Spanish standard. It is therefore almost impossible to assign an average of value; we might

say from 97 to 100 cents. There were fractional parts of the dollar, as in Mexico.

A sort of siege-coinage, of one real pieces, appeared in 1846, apparently shaped with hammer and chissel, and equally rude as to proportions of alloy. They varied from 29 to 45 grains, (0.060 to 0.094 ounce,) and from 550 to 637 fine; average value, six cents, or less than half the original or regular coin of the same denomination.

NEW GRANADA.

Gold.—The old doubloon of Columbia, and that of New Granada, (originally part of Columbia,) of the Spanish basis have almost wholly disappeared from trade; but their value may here be stated: 8 E., mint of Bogota, 1823 to 1836, 0.868 ounce, 870 fine... \$15 61.7

"Popayan, same dates, 0.867 ounce, 858 fine.... 15 39.

 in the standards, both of weight and fineness, and some reduction in value. The new piece, as coined at the mint of Bogota, dating 1849 to 1856, does not bear the denomination 8 E, as formerly, but the weight, "25.8064 G." or grammes, (French,) and the alleged "lei" or fineness, "0.900"; it yields here 0.826 ounces, 894 fine, \$15.31. But the piece coined at the mint of Popayan is of a different size, and stamped "16.400 M" and "lei 0.900." It yields (1856) 0.525 ounce, 891½ fine, \$9.67.5, and is therefore intended either as a piece of 5 escudos, or 10 pesos, (dollars.)

The gold coins of New Granada, being silvery, are partible at this

The gold coins of New Granada, being silvery, are partible at this mint, when presented in quantities over 75 ounces, and will then yield an addition to the above valuation, at the rate of five or six cents

to the doubloon, and to the piece of ten dollars in proportion.

Silver.—There are several varieties of dollars extant of Columbia and New Granada. 1. That which bore the head of a native princess, or cacique, with a crown of feathers, was base and irregular, worth about 75 cents; it ceased to be coined in 1821. 2. The dollar of 1835-'36 was of the usual Spanish rates, and is worth about 107½ cents. 3. The dollar of 1839, light, and professing to be two-thirds fine, ("lei ochodineros,") yields about 68 cents. We style them dollars, although they were known at home as pieces of 8 reals. The fourth variety is new; the only piece we have seen, bore the date 1857, and like the new peso or dollar of Chili, appears to be purposely conformed to the five-franc piece of France, both in weight and fineness. The results are, 0.803 ounce, 896 fine, value 98 cents.

VENEZUELA.

We have seen only copper coins of this division of the former republic of Columbia, (centavo and half-centavo,) and they indicate a division, like our own, of the dollar. It is understood that the French piece of five-francs is current there as a peso or dollar, which is no doubt true of the new silver of New Granada also.

There was formerly a coinage of small silver pieces of low alloy at Caraccas, of no commercial interest. Gold has never been coined there.

ECUADOR.

No recent pieces of the mint of Quito have been examined. The pieces of 4, 2, and 1 E., 1835-'36, were 844 fine; the largest piece (half doubloon) worth \$7 60. The small silver coinage, 1833 to 1847, and probably later, was of base alloy; the piece of 2 R. (quarter dollar) being about 675 fine, and worth 20 cents.

PERU.

The political divisions of this country and the distribution of the coinage among various mints perplex the study of Peruvian money down to the date of 1855, inclusive.

The doubloons, dating from 1826 to 1837, were of Spanish standards, and worth from \$15 53 to \$15 62. The new gold coinage will be

particularized after disposing of the old silver series.

The silver dollar or 8 R., of 1822 to 1841, was of full Spanish standards, and worth 106 cents. An issue, bearing new devices, dating 1851-'55, gave an average of the same value. In 1855 the standard of weight was materially reduced, and the specimens are so diverse that it is hard to tell what was intended; for example, ranging from 0.760 to 0.772 ounce, at the assay 909, the values are 94 to 95½ cents. In the same year the new style of coinage was introduced, which will

be noticed presently.

In regard to the smaller pieces a distinction is to be observed. Those of the mint of Lima (the mint mark being an interlacing of the letters L I M A, looking like an M) were maintained at the old standards, and were in due proportion of value. Those of Cuzco and Arequipa, (to be known by C U Z. and A R E Q. in the legends,) commencing about the year 1835, were debased in fineness to a standard of two-thirds; by actual assay, 650 to 667 thousandths. Consequently the half dollars or 4 R. are worth 39 cents, the quarter dollars 19.5 cents. These pieces are continually occuring in mixed deposits at our mint. In 1854-'55 a half dollar was coined at Lima of the usual fineness, but reduced in weight, and by no means well adjusted. One specimen weighs 0.381, another 0.402 ounce, at 904 fine, value 47 and 49.5 cents.

In 1855 the coinage both of gold and silver was thoroughly reformed and decimalized. Instead of escudos and reals the *peso* is the normal denomination, and the scale of coins and the rates of coinage are ré-

markably conformed to those of the United States.

The fineness formerly marked in quelates (carats) for the gold, and dineros and granos for the silver, is now expressed decimally in both cases, "9 decimos fino." Upon this basis the gold piece of 20 pesos, 1.076 ounce, would be equal to our twenty dollars; the peso of silver, 0.858 ounce, of the value of 105 cents; the half peso, 49 cents. Here is the same distinction between the whole dollar and the smaller silver that is made in our own coinage. We have had no opportunity of making assays of the coinage of 1855; the pieces which came under notice were specimen coins, presented to the mint cabinet, and were not struck at Lima; in fact, we learn that the new system above noticed is not yet operative.

BOLIVIA.

The doubloons of the usual Spanish standards, 1827-'36, yields

 $$15_{-}58$

The dollar, 1848, latest date noticed, averages 0.871 ounce, 900½ fine, 106.7 cents. The half and quarter, to 1828 inclusive, were in proportion; but from 1830 a debasement to the two-thirds standard makes the half dollar worth 39 cents; the quarter, 19.5 cents. No late dates have been seen here.

CHILI.

The doubloons of this country from 1819 to 1840 or later, though of various devices, were of the usual Spanish or Mexican standards,

and varied in value from \$15 57 to 15 66. An entirely new system of coinage was promulgated in 1851.

The silver dollar of the dates 1817 to the change of coinage was of

the usual weight and fineness, and yields full 106 cents.

In 1851 the coinage was thoroughly decimalized with the same standard of fineness (nine tenths,) but not the same standard of weight, as in our country or in Peru.

The gold piece of ten pesos or dollars of 1855 weighs 0.492 ounce, is 900 fine, value \$9 15.3. This however, is only the trial of a single It is stated that there are also pieces of five and two dollars.

The silver peso, of 1854-56, on an average weighs 0.801 ounce, $900\frac{1}{5}$ fine, 98.2 cents. The half peso proves to be in due proportion. There are said to be the smaller sizes, of twenty, ten, and five cents, proportional in weight; and in copper, a cent and half cent.

BRAZIL.

The changes in the denominations of coin are much influenced by the prevalence of paper money, as will be seen by the progressive elevation of the nominal value of the normal silver coins herein noticed.

Gold.—Before 1822 there was the moidore, (moeda d'ouro) of 4,000 reis, weighing 0.261 ounce, 914 fine, value \$4 92. Also a half moidore, in proportion. From 1822 to 1838 and perhaps later, there was the piece of 6,400 reis, weighing 0.461 ounce, 915 fine, value \$8 72. Of the dates 1854-'56 we observe a piece which bears no name or valuation on its face, weighing 0.575 ounce, 9171 fine, \$10 90.5; and a piece of half the size and value.

Silver.—The piece of 960 reis, before 1837, was either a Spanish dollar annealed and re-stamped, or its equivalent, therefore worth 106 cents. There was also the 640 reis, reaching back a century or more, two-thirds of a dollar, now worth 70 cents, and the 320 and 160 reis

in proportion.

In 1837 a new series was commenced of 1,200, 800, 400, 200, and 100 reis; the largest piece was equal in weight to the former piece of 960, and about 891 fine; value 105 cents. Another series, apparently the latest, and beginning (so far as noticed) with 1851, makes the largest piece 2,000 reis; with a half and quarter. The piece of 2,000 weighs 0.820 ounce, 918½ fine, value \$1 02.5.

The new legal standards of fineness, both for gold and silver, are

evidently eleven-twelfths, or 9163 thousandths.

ARGENTINE REPUBLIC.

No specimens of recent coinage from Buenos Ayres have been observed. The doubloons and dollars of the "Provincias de la Plata," dating 1813-'32, were very irregular in fineness; the former varied in value from \$14 66 to \$15 50; the latter, 92 to 95.5 cents.

The dollar of the "Republica Argentina," 1838-'39, varied from

102 to 108 cents; the average about 106 cents.

ENGLAND.

Gold.—The pound sterling is represented by the coin called the sovereign, whose legal standards are eleven-twelfths (or $916\frac{2}{3}$ thousandths) fine, and at the rate of $46\frac{2}{4}$ pieces to a pound troy; equal to

 $129\frac{1}{3}$ grains, or $0.256\frac{8}{10}$ ounce, not making exact fractions.

The coinage of sovereigns commenced in 1816. Before that time the principal coin was the guinea of the value of one pound and one shilling, (21s.,) which was on the same legal basis, and which ceased to be coined when the exact pound piece was introduced. Although the term guinea is still in familiar use there, the actual coin is seldom seen, and need not be further spoken of, except to say that the pieces are so much and so irregularly worn that they can only be taken by weight; their average fineness being 915½.

From 1816 to about 1851 the average fineness of sovereigns was $915\frac{1}{2}$, with great regularity. Since that date the fineness has been more exactly conformed to the legal standard, and is reported by us at $916\frac{1}{2}$. The average weight of the older pieces is 0.256 ounce, and the value \$4 84.8; new pieces $0.256\frac{3}{4}$, or $123\frac{1}{5}$ grains—value \$4 86.3. There are also half sovereigns, and some double sovereigns have been

coined.

Silver.—The silver coinage was also reformed in 1816. It bears a subsidiary relation to the gold, being coined at a higher rate than its true value, in order that it may be kept in the country to secure the purpose of change. Instead of the shilling being worth 24.3 cents here, (as the twentieth part of a pound,) it is 23 cents for new and unworn pieces, and about 22 cents when worn. The assay of new pieces is $924\frac{1}{2}$ thousandths, (the standard being 925;) the average weight of the new shilling $0.182\frac{1}{2}$ ounce.

There are also, in silver, crowns, of five shillings, half crowns, florins of two shillings, sixpences, or half shillings, and pieces of four pence, and three pence, current; besides these, (holiday money not current,) the pieces of two, one and a half, and one penny, coined annually in small sums. Silver coins of England come here in the hands of travellers and emigrants, not in the way of commerce.

NETHERLANDS.

Within a few years the Dutch government has taken the singular ground of discarding gold from coinage. The pieces of ten and five guilders are, of course, still to be met with; but their average value declines by reason of wear, and not being sustained by fresh issues. The ten guilders may now be put down at the weight of 0.215 ounce,

899 fine, value \$3 99.

In silver the guilder before 1841 was 0.346 ounce, 896 fine, value 42.2 cents. Pieces of three guilders and half guilder were of the same rates. The small pieces of 25 centimes and 10 cents (quarter and tenth guilder) were only 569 fine, but proportionally heavy, and of full value. There was an entire change of standards in 1841. A piece of $2\frac{1}{2}$ guilders was issued, weighing 0.804 ounce, 944 fine, (the standard being 945,) and value \$1 03.5. The guilder, in proportion, 41.4 cents—a reduction upon the old rate.

BELGIUM.

By the law of 1832 the standards and denominations were conformed to those of France, but for some years the actual average fineness both of gold and silver was as low as 895. More recently the gold has been 899; but the new piece of 25 francs weighs 0.254 ounce, value \$4 72, which is a little below proportion as compared with the 20 franc piece, which averaged \$3 83. New five franc New five franc pieces, silver, are 0.803 ounce, 897 fine, value 98 cents.

FRANCE.

Gold.—New coins average $899\frac{1}{2}$ fine, with $0.207\frac{1}{2}$ ounce for the 20 franc piece, and value \$3 86. (It is convenient to remember that this coin is worth just one dollar less than the British sovereign.) The other sizes are 40, 10, and 5 francs; the latter lately introduced. On

a general average the 20 franc is worth \$3 84.5.

Silver.—The older pieces averaged a little over the standard fineness of 900; new pieces do not average higher than $898\frac{1}{2}$. The five franc piece generally is of the weight 0.803 ounce, and value 98 The smaller pieces of two francs, one franc, half and quarter franc, are of the same fineness, and proportional in actual value, except as they may have suffered from wear.

SPAIN.

Gold.—The last date that we have noticed of the long-continued doubloon series of Peninsular coinage was 1824. The half doubloon of that year weighed 0.433 ounce, 865 fine, value \$7.75. The new gold coin is a piece of 100 reals, weighing 0.268 ounce, 896 fine, \$4.96.3.

Silver.—The principal coin (not the largest) seems to be the piece of four reals, or pistareen, which before 1837 was of the weight 0.189, fineness 810, value 20.7 cents. The standards have been lately changed, and the new pistareen weighs 0.166 ounce, fineness 899, value 20.3 cents. There is also a large piece of 20 reals, (dollar,) worth 101.5 cents; and pieces of 10, 4, 2, and one real in proportion.

PORTUGAL.

Coins of this country are rarely seen here. The gold coroa or crown of 1838, the latest date observed, weighed 0.308 ounce, 912 fine, \$5 81.3; the half crown in proportion.

The silver crown of 1,000 reis, same date, weighed 0.950 ounce, 912 fine, \$1 18. Pieces of 500, 200, and 100 reis were in proportion.

GERMANY.

The German coinage appears multifarious and confused, on account of the many separate governments, the diverse systems of moneys, and the repeated changes of standards. They are now, however, reducible to two general classes, one of which chiefly pertains to the

northern, the other to the southern states.

In the north, including Prussia, the gold coins are the ten and five thaler pieces, the former weighing 0.427 ounce; but they are not all of the same fineness, those of Prussia being about 903, making in value \$8; those of Brunswick and Hanover about 895, making in value \$7 90.

The ducat of southern Germany is coined at the old imperial rates;

weight 0.112 ounce, fineness 986, value \$2 28.3.

The silver coin in the north is the thaler series; new thalers weigh 0.716 ounce, 750 fine, value 73 cents. Their general average value is 72 cents.

In the south the gulden or florin is the normal coin, weighing 0.340 ounce, 900 fine, value 41.7 cents. Both the thaler and gulden are so far harmonized by the last money convention that a large coin is issued by all the states, which is equally a double thaler and a piece of $3\frac{1}{2}$ gulden; its weight 1.192 ounce, fine 900, value \$1.46. There are also a half gulden and divisions of the thaler; the latter of low alloy, but in proportion as to value.

The crown dollar (kromen thaler) series, formerly maintained in Bavaria, Baden, and Wurtemberg, weighed 0.946 ounce, 875 fine, value \$1 12.6. Pieces marked "zehn (or x) eine feine mark," (the former convention dollar,) were equivalent to those still coined in Austria; which see. The Bremen piece of 36 grote is of the value 37.5 cents.

DENMARK, SWEDEN, AND NORWAY.

The specie rix dollars of these countries are nearly the same in value, though diverse as to standards. The "2 rigsdaler" coin of Denmark, and the "rigsdaler species" of Norway are of the weight 0.927 ounce, fine 877, value \$1 10.7. The Swedish rix dollar, formerly of the same rates, of latter years has been at the weight of 1.092 ounce, fine 750, value \$1 11.4.

The Danish ten thaler piece is of the same weight, fineness and value as that of Brunswick (see Germany,) and the Swedish ducat weighs 0.111 ounce, 975 fine, value \$2 26.7. No gold is coined in

Norway.

SWITZERLAND.

The new "2 franc" of "Helvetia" is equivalent to the two france piece of France; weight 0.323 ounce, fine 899, value 39.5 cents.

ITALIAN STATES.

LOMBARDY and VENICE.—(See Austria.)

Sardinia.—The system of coinage is the same as in France; which

ee. The lira is equivalent to the franc.

Tuscany.—The gold coin is the zecchino, or sequin, of ducat weight, and professedly of absolutely fine gold. The actual results are, 0.112 ounce, 999 fine, value \$2.30. The silver florin, or forino, (subdi-

vided into 100 quattrini,) weighs 0.220 ounce, 925 fine, value 27.7 cents. There is a large piece, of four florins, called the leopoldone; also a

half and quarter florin; all in due proportion of value.

Rome.—The new $2\frac{1}{2}$ scudi (gold) weighs 0.140 ounce, 900 fine, value \$2 60. There are also pieces of 5 and 10 scudi. The silver scudo weighs 0.864 ounce, 900 fine, value \$1 06. It is divided into 100 bajochi. The decimal system was adopted in 1835.

NAPLES.—Gold appears to be rarely coined in the kingdom of the Two Sicilies; and the silver coinage is awkwardly adapted to the imaginary ducat of account, which perhaps by this time has fallen into disuse; and if not, should be estimated at about 83 cents. The principal silver coin is the scudo, or 120 grani, weighing 0.884 ounce, 830 fine, value \$1. A new scudo gives the figures 0.887 ounce, 833 fine, value \$1 00.5.

AUSTRIA AND LOMBARDY.

The coins of these two branches of the same empire, though very diverse as to standards and denominations, are still brought into an exact relation as to value. Thus, in gold, the ducat weighs 0.112 ounce, 986 fine, value \$2 28; and the souverain weighs 0.363 ounce, 900 fine, value \$6 77; intended to be equal to three ducats. There are, also, the half souverain and the double and quadruple ducat.

In silver, the former convention rix dollar of Germany, "ten to the fine mark," is still used in Austria; its weight 0.902 ounce, fine 833, value \$1 02.5. Its half is the Austrian florin. The zwanziger, or piece of 20 kreutzers, is one-sixth of the rix dollar, weight 0.215 ounce, fine 582, value 17 cents. There are smaller pieces, of base alloy.

The scudo of Lombardy is the equivalent of the rix dollar; weight 0.836 ounce, 902 fine, value \$1 02.7. The lira, one-sixth of the scudo, is of the same fineness. It is interchangeable with the 20 kreutzer piece.

RUSSIA.

The new five-rouble piece (gold) is of the weight 0.210 ounce, 916 fine, value \$3 97.6. There are pieces of three roubles, in proportion. The silver rouble (subdivided into 100 copecks) weighs 0.667 ounce, 875 fine, value 79.4 cents. There are half and quarter roubles, and smaller divisions; and a large Russian-Polish piece, of ten zlotych, equal to one and a half roubles, or \$1 19.

TURKEY.

The gold piece of 100 piastres, since 1845, is of the weight 0.231 ounce, 915 fine, value \$4 37.4; the piece of 50 piastres in proportion.

The silver coins, beginning with the same date, are about 830 fine; older pieces are of base alloy and a somewhat confused medley of denominations. The new piastre weighs $38\frac{1}{2}$ thousandths of an ounce, and is worth 4.38 cents; there are larger pieces of 2, 5, 10, and 20 piastres; the latter worth 87.5 cents.

GREECE.

The 20 drachm piece weighs 0:185 ounce, 900 fine, value \$3.45. The 5 drachm, 0.719 ounce, 900 fine, 88 cents. Smaller pieces in due proportion.

AUSTRALIA.

The sovereign or pound sterling of the mint at Sydney, 1855, weighs 0.256 ounce, fine 916½, value \$4.85. By a singular liberality, the "one pound" piece of the "government assay office, Adelaide," was issued at the stamped rates of "5 dwt., 15 grains" in weight and "22 carats" fine. The weight of one specimen received holds out 0.281 ounce, and assuming the fineness as correct, the value is \$5.32; a large advance upon the true pound sterling. This was in 1852, since which time the error has been corrected.

EAST INDIES AND JAPAN.

The multitude of rupees of Hindostan, more diverse in appearance than in actual value, appears to have given way to the Anglo-Indian coinage bearing the head of the British sovereign. The uniform system of coinage began in 1835.

The gold mohur, of fifteen rupees, weighs 0.374 ounce, 916 fine, value

\$7 08.

The silver rupee, same weight and fineness, is of the value of 46.6 cents. There are also half and quarter rupees, in proportion of value.

The rectangular silver coin of Japan called *itzebu*, weighs 0.279 ounce, 991 fine, value 37.5 cents. There is a gold coin called *copang*, a large, thin, oval plate, whose value cannot be satisfactorily stated; the specimen in the mint cabinet is worth about \$6.50.

I have the honor to be, with great respect, your faithful servant, JAMES ROSS SNOWDEN,

Director of the Mint.

Hon. Howell Cobb, Secretary of the Treasury.

Note.—If it is desired to convert thousandths of an ounce into grains, take the half, and deduct four per cent. of the half.

To convert grains into thousandths of an ounce, add one twenty-fourth and double the sum.

J. R. S.

No. 2.

Circular instructions to the Treasurer of the United States, the Assistant Treasurers of the United States, the treasurers of the mint and the branch mints charged by law with the duties of assistant treasurers, and the public depositaries designated under the 15th section of the act of 6th August, 1846.

TREASURY DEPARTMENT,
May 27, 1857.

The act of Congress of 3d March, 1857, entitled an act to amend an act entitled "An act to provide for the better organization of the treasury, and for the collection, safe keeping, transfer, and disbursement of the public revenue," (chapter 114,) requires you to safely keep all moneys deposited by any disbursing officer or disbursing agent of the United States. Whenever such moneys shall be offered for deposit with you by such officer or agent, or shall be remitted to you for the credit of such officer or agent, you will receive it, and place the amount to the credit of such officer or agent on your books, subject to the checks of such officer or agent as hereinafter directed.

It is also provided by the act, that disbursing officers or agents shall draw for the amounts deposited with you only in favor of the persons to whom payment is to be made in pursuance of law and instructions, except when payments are to be made in sums under twenty dollars. Such instructions should be given as may enable this provision to be made practicable. If drafts can only be made payable to public creditors in person, according to its literal terms, the intention of the act would be defeated, since a very large proportion of the persons to whom payments are required to be made reside at such distances from public depositaries that they would refuse to accept drafts in payment, if compelled to present them in person. A small portion of the current expenses of the United States could be paid by disbursing officers or agents under a strict construction of this act.

Should you recognize drafts payable in the alternative—to the persons to whom payment is to be made, or their order—such form would cast upon the public depositaries the responsibility of verifying every endorsement upon drafts presented for payment, under the hazard of being compelled to pay the true owner out of their individual property, should they have paid the public money upon any forged endorsement of such draft. Disbursing officers' checks have been for several years past extensively employed as means of remittance from one section of the country to another. This use will not probably be lessened by increasing them, according to the obvious intention of this act, and the risk of forged endorsements will of course be aggravated. This department cannot impose such hazard on depositaries.

The only secure and proper mode of enforcing this provision is accordingly to instruct you to decline the payment of the drafts or checks of disbursing officers or disbursing agents unless drawn in favor of persons whose identity is known to you, and presented for payment by them agreeably to the terms of the act, or such checks

as may be drawn in favor of some person or bearer, according to the form heretofore sanctioned by this department. Such checks as may be drawn by any disbursing officer or disbursing agent payable to himself or bearer, must either contain the statement that they were drawn to pay small claims, or a list or schedule of the claims to be paid by the proceeds of such checks must be received by you, corresponding in amount, before you will be authorized to pay such checks, unless the head of the department, under the orders of which any disbursing officer or disbursing agent is acting, shall expressly authorize the payment of the checks of such officer or agent, payable to himself or bearer, without such list or schedule; in which case you will file the authority and pay such checks.

Whenever any disbursing officer or disbursing agent shall die, resign, be superseded or removed, you will at once stop further payment of his drafts or checks upon you. Specific instructions will be given in such cases as to the payment of outstanding checks and the disposal of the balance deposited with you to the credit of such officer

or agent.

Should any disbursing officer or disbursing agent having public money deposited with you to his credit request from you information as to the state of his deposit account, you will furnish him with such statement in detail, showing the sums received by you for his credit and the amounts paid by you on his drafts or checks since the last preceding statement. Such statements will be officially signed by you—the date when furnished will be entered on your books—and you are not required to furnish them to any such officer or agent more frequently than once a month.

The drafts or checks drawn on you by disbursing officers or disbursing agents will not be returned to them after payment, unless by the express direction of this department. Those of each officer or agent should be kept in a distinct file, together with such lists or schedules or other authority as may have been sent to authorize payment of those drawn in favor of themselves or bearer, so that, should they be required by the accounting officers in the adjustment of the accounts

of such officer or agent, they may be accessible.

HOWELL COBB, Secretary of the Treasury.

P. S.—A copy of the instructions of this department to its disbursing officers and disbursing agents is herewith transmitted for your information.

No. 3.

Circular instructions to the disbursing officers and disbursing agents employed under the direction of the Treasury Department.

TREASURY DEPARTMENT,

May 27, 1857.

In compliance with the provisions of the act of Congress entitled an act to amend an act entitled "An act to provide for the better organization of the treasury, and for the collection, safe keeping, transfer, and disbursement of the public revenue," approved March 3, 1857, (chapter 114,) you will deposit all public moneys advanced to you for disbursement, now in your hands, or which may hereafter be remitted to you, with the nearest or most convenient public depositary, to your credit in all cases, except such as shall come within the scope of the concluding paragraph of the present instructions. Public money so deposited to your credit will be paid out by such public depositary only upon your drafts or checks in favor of the persons to whom payment is to be made, with the three exceptions following:

1. A disbursing officer or disbursing agent is authorized to draw checks, payable to himself or bearer, for such amounts as may be necessary to pay sums under twenty dollars, by stating in such checks that

they are drawn to pay small claims.

2. A disbursing officer or disbursing agent charged with the payment of salaries or compensation of officers or other persons employed in the public service, whose salary or compensation is fixed and made payable at certain periods, may, two days before such period of payment arrives, draw checks, payable to himself or bearer, for a sufficient amount to pay such salaries or compensation, by placing with the public depositary on whom such check is drawn a list or schedule, officially signed by such officer or agent, containing the names and sums payable to each person from the proceeds of such checks, and showing the amount thereof.

3. A disbursing officer or disbursing agent, whose payments are to be made at a distance from a public depositary, may draw checks, payable to himself or bearer, for such amounts as shall be required to make such payments; provided, that before the presentation of any such check for payment, he shall cause the depositary on whom it is drawn to be furnished with a list or schedule, officially signed by such officer or agent, stating in detail the salaries, wages, and claims to be paid by the proceeds of such check, with the names of the persons to whom they are payable, and the amount thereof. Any place will be regarded as distant from a public depositary within this exception, where the latter cannot be reached without expense and delay.

All drafts or checks of disbursing officers or agents must be drawn payable specially to the person to whom payment is to be made, if he chooses to accept it in that form, or payable in the alternative to such person by name or bearer. Public depositaries are not required to pay the drafts of disbursing officers or disbursing agents made payable

to any person or his order.

Drafts and checks upon public depositaries drawn by disbursing officers or disbursing agents will not be returned to them after payment. They will be held by the depositary subject to the order of this department. Should a disbursing officer or disbursing agent require an official statement of his deposit account, it will be furnished on application to the depositary, but not more frequently than once a month.

No allowance will be made to any disbursing officer or disbursing agent of this department for any expenses charged for collecting the

money on drafts or checks, unless authority shall have been expressly given before incurring such expense. These drafts or checks will be payable on demand by public depositaries established at the principal points where the moneyed transactions of their respective regions are mainly concentrated. It is accordingly presumed that such drafts or checks can in all cases be readily exchanged for gold and silver coin. Any charge for collecting drafts or checks will therefore be disallowed on the adjustment of the accounts of the officers and agents of this department in all cases, unless an official report shall have been made by the officer or agent to the First Comptroller, or Commissioner of the Customs, according as the final decision on the accounts of such officer or agent belongs to either by law, stating in detail the facts which render such expense necessary, with its amount, and the answer of the Comptroller or Commissioner shall have been received author-

izing such expense before it shall be incurred.

Collectors of the customs, and the surveyors acting as collectors, being also disbursing agents of the expenses of collecting the revenue, are required to make periodical estimates of the sums required from the treasury for immediate disbursement for that object, on which the Treasurer's drafts are remitted, usually on themselves, if they hold balances as collectors and their custom-houses are distant from any public depositary. Disbursing officers for the construction of public buildings are frequently furnished with the Treasurer's drafts on some collector in the neighborhood, to supply them with money for immediate disbursement on their estimates previously sent. cases the provisions of the act cannot be understood to require such officers or agents, on receiving money at a custom-house for immediate disbursement, to transport it to the public depositary, often hundreds of miles distant, merely for the purpose of carrying the same money To illustrate the practical effect of such literal construction of the act, it may be stated that the six eastern or New England States contain but one public depositary—the Assistant Treasurer at Boston while there are thirty-four custom-houses, at each of which more or less revenue is collected. Congress cannot have intended that each of these thirty-four collectors, at the close of every month, should carry to Boston the money received on the Treasurer's draft on himself for the current expenses of collecting the revenue—more than three hundred miles distant from several important custom-houses in Maine deposit it with the Assistant Treasurer to his credit as disbursing agent, and then draw the same money by check and carry it back for expenditure. The distance between a custom-house and the nearest public depositary is much greater in some other sections of the United States, though the cases are not so numerous.

In all cases, therefore, where disbursing officers or disbursing agents shall receive money for the Treasurer's drafts, remitted upon specific estimates for immediate expenditure, they will at once disburse the money for the purposes and objects estimated, without the delay and inconvenience of placing it in a public depositary, unless it be near at hand, in which case such deposit may be made. The current disbursements for expenses of collecting the revenue and the construction

of public buildings in charge of this department will accordingly be periodically made pursuant to estimates provided for by the Treasurer's drafts, as heretofore.

HOWELL COBB, Secretary of the Treasury.

P. S.—A copy of the instructions of this department to the public depositaries on this subject is herewith transmitted for your information.

No. 11.

TREASURY DEPARTMENT, July 3, 1857.

Sir: I herewith transmit, for your information and government, a copy of a letter addressed by me to the First Auditor of the Treasury, respecting certain vouchers in the account of the Clerk of the House of Representatives, now in his office for settlement.

Very respectfully,

HOWELL COBB, Secretary of the Treasury.

Hon. WM. MEDILL, First Comptroller, &c.

TREASURY DEPARTMENT, June 30, 1857.

SIR: The Clerk of the House of Representatives submits in settlement of his accounts at your office the following vouchers:

House of Representatives, United States,

To William Cullom, Dr.

For additional compensation for settling and adjusting the outstanding bills under the book resolution, found on file in the office, which belonged to my predecessor, \$750.

March 7, 1857, received of William Cullom, Clerk of the House of Representatives, United States, \$750 in full of the above account. WILLIAM CULLOM.

Endorsed: Allowed.

B. B. THURSTON, Chairman Committee of Accounts.

House of Representatives, United States,

To John M. Barclay, Dr.

For amount of compensation allowed by the resolution of the House of Representatives of March 3, 1857, \$5,706 97.

March 30, 1857, received of William Cullom, Clerk of the House of Representatives, United States, \$5,706 97 in full of the above account.

JOHN M. BARCLAY.

Endorsed: Allowed.

B. B. THURSTON.
Chairmam Committee of Accounts.

House of Representatives, United States,

To John M. BARCLAY, DR.

For clerical services on alphabetical index during the 33d Congress,

\$250.

February 19, 1857, received of William Cullom, Clerk of the House of Representatives, United States, \$250 in full of the above account.

JOHN M. BARCLAY.

Endorsed: Allowed.

B. B. THURSTON, Chairman Committee of Accounts.

House of Representatives, United States,

To DANIEL BUCK, DR.

For collating, correcting, and preparing for publication the list of appropriations made, new offices created, &c., as required by the act of July 4, 1836, for the 2d session 28th Congress, 1st and 2d sessions 29th Congress, 1st and 2d sessions 30th Congress, 1st and 2d sessions 31st Congress, 1st and 2d session 32d Congress, 1st and 2d sessions 33d Congress, and 3d session 34th Congress, as authorized by the resolution of the House of Representatives of March 3, 1857, at \$360 per session, \$4,320.

March 31, 1857, received of William Cullom, Clerk of the House of Representatives, United States, \$4,320 in full of the above account.

DANIEL BUCK.

Endorsed: Allowed.

B. B. THURSTON, Chairman Committee of Accounts.

House of Representatives, United States,

To W. P. INGRAM, DR.

For services as clerk to Committee on Accounts of 34th Congress \$650.

March 31, 1857, received of William Cullom, Clerk of the House of Representatives, United States, \$650 in full of the above account.

W. P. INGRAM.

Endorsed: Allowed.

B. B. THURSTON, Chairman Committee of Accounts.

House of Representatives, United States,

To John Bailey, Dr.

For compensation for additional services as clerk in the office of the House of Representatives, United States. Twenty-five dollars a month from the 1st day of May, 1850, to June 30, 1853, being thirty-eight months, \$950.

March 31, 1857, received of William Cullom, Clerk of the House of epresentatatives, United States, \$950 in full of the above account.

JOHN BAILEY.

Endorsed: Allowed.

B. B. THURSTON, Chairman Committee of Accounts.

House of Representatives, United States,

To J. C. WALKER, DR.

For this amount allowed as reading clerk, by resolution of the House of March 3, 1857, directing a sufficient sum to be paid out of the contingent fund to make regular annual salary for past services equal to the annual amount now received by the reading clerk of the Senate, (see statement annexed.) \$1,748 67.

March 31, 1857, received of William Cullom, Clerk of the House of Representatives, United States, \$1,748 67, in full of the above account.

J. C. WALKER.

Endorsed: Allowed.

B. B. THURSTON, Chairman Committee of Accounts.

609

February 14, 1857, received of William Cullom, Clerk of the Fouse of Representatives, United States, \$609 in full the above account.

THOMAS J. GALT.

Endorsed: Allowed.

B. B. THURSTON Chairman Committee of Accounts.

House of Representatives, United States, To Phin. B. Tompkins, Dr.

For amount of compensation as tally clerk and assistant reader; as per resolution of the House of Representatives, United States, of March 3, 1857, from February 12, 1856, to February 28, 1857, inclusive,

March 31, 1857, received of William Cullom, Clerk of the House of Representatives, United States, \$378 46 in full of the above account. PHIN. B. TOMPKINS.

Endorsed: Allowed.

B. B. THURSTON, Chairman Committee of Accounts.

There are other claims, as I am informed, which have not been presented, of a similar character.

A portion of these payments were made under resolutions of the House, directing the Clerk to make them. The others were made under the direction of the Committee of Accounts of the House; all of them were made out of the contingent fund of the House. Upon this statement of facts, the question arises, shall the Clerk be allowed credit for them by the accounting officers of the treasury in the settlement of his accounts? As a general rule, each House of Congress has the entire control and direction of its contingent fund, and their officers should be allowed credit for such payments as they make in compliance with the orders of their respective Houses. When, however, a case arises where the contingent fund has been appropriated to a purpose in violation of the law, it is the duty of the accounting officers of the treasury to arrest its payment to the extent of refusing a credit for it in settlement of the accounts of the officer. Was the House authorized, either by resolution or through its recognized organ, the Committee of Accounts to allow the foregoing sums to be paid out of its contingent fund? The fact is admitted that each of these payments was made to a clerk or employé of the House as "extra allowance" to such officer for services rendered by him in his official capacity. Is there any law which prevents this from being done?

The joint resolution of July 20, 1854, provided that "the usual extra compensation" should not thereafter be allowed to the officers who received the benefit of that law in the increase of their salaries. The term "usual extra compensation," as here used, referred to the extra pay which for a number of years had been voted to the clerks and employés of the Senate and House by resolutions of those bodies.

It is not pretended that the payments now made by the clerk were of that character, and I do not think, therefore, that this joint resolu-

tion applies to these cases.

My attention has been called to the several acts of March 3, 1839; August 23, 1842; August 26, 1842; September 30, 1850; and August 31, 1852. The object of these laws was to prevent extra allowance to any and all officers of the government who were in the receipt of regular and fixed salaries. They have been construed by the practice of the government not to interefere with the power of the two Houses of Congress over their contingent fund. This construction is based upon the fact that the terms of these different laws do not, in specific language, include the officers of Congress, and contain no express limitation upon the power of the houses over their contingent fund. In the view which I propose to take of another provision of law, which, in my judgment, must control the decision of this question, it becomes unnecessary for me to review the practice of the department under the various acts I have cited, and I therefore pass from their consideration without expressing any opinion upon their applicability to

the present case.

The act of March 3, 1845, which was "An act making appropriation for the civil and diplomatic expenses of the government for the year ending the thirtieth June, eighteen hundred and forty-six, and for other purposes," provides, in the second section of the act, "that no part of the appropriations which may be made for the contingent expenses of either House of Congress shall be applied to any other than the ordinary expenses of the Senate and House of Representatives, respectively, nor as extra allowance to any clerk, messenger, or attendant of the said two houses, or either of them, nor as payment or compensation to any clerk, messenger, or other attendant [to] be so employed by a resolution of one of said houses, nor in the purchase of books to be distributed to members." The language of this law is plain, positive, and unequivocal, and, if in force, forbids in express terms the allowance which has been paid in the cases under con-If this law is held to be in existence, then the accounting officers of the treasury should refuse to allow credit to disbursing officers, both of the Senate and House, for any payment made by them out of the contingent fund, either for "extra allowance to any clerk, messenger, or attendant' of either house, or "for payment or compensation to any clerk, messenger, or attendant employed by a resolution of one of said houses." The only question for the consideration of the department is the one suggested above. Is the second section of the act of March 3, 1845, in force? The only reason given to show that it is not is that it is a provision in an appropriation bill, and expired with the fiscal year for which appropriations were made in that bill. The fact that it is contained in an appropriation bill is not sufficient to justify the conclusion that the law is temporary and not permanent in its character. There is nothing in the language of the law which would indicate the intention of Congress to limit its operation to the then succeeding fiscal year, and its just and wise provisions are as applicable since that year as before. There is nothing peculiar to the fiscal year ending the thirtieth June,

eighteen hundred and forty-six, which would have called for such enactment, and rendered its future operation improper and unnecessary. I am not left, however, to rely alone upon my own judgment in deciding this point. The question has been thoroughly considered by our predecessors, and opinions similar to the one I have indicated given and acted upon by them. I find the following one, given by Mr. Whittlesey, when acting as First Comptroller, on a similar case.

"This provision is inserted in an appropriation act, but it is a distinct and substantive enactment, and is as permanent as any other law. As doubts have been entertained on this point, the question will

be examined somewhat at length.

"In former times it was the custom in Congress, as well as in England, to confine every statute to one subject matter; to insert nothing in it not germane to its general character and object, and to use provisos as qualifications of and limitations to the general enactments in which they may be inserted, and to those only, and not apply them as limitations to or qualifications of other statutes. But the pressure of legislation in Congress has been so great during the last ten or fifteen years, and the difficulty of passing any general statutes by themselves, altering the former laws, has been so insuperable that the custom has crept in from apparent necessity of engrafting such enactments upon the general appropriation acts, either in the

form of provisos or of distinct sections.

"When such enactments are contained in distinct sections in an appropriation act or other statutes there is no room for a question that the words contained in them should receive the same interpretation and construction as if they were used in a statute by itself separate and distinct from any other matter or subject, and when a substantive provision is inserted in an appropriation act or other act of Congress in the form of a proviso, the words and phraseology should all be taken together, and if they indicate or imply an intention of Congress to limit the operation of such proviso to the subject matter of the statute, and the time during which the enacting clauses of it are to have effect, then the proviso should be so limited. the contrary, the words of such proviso are not specially limited to the enacting sections of the statute, but general, refer to the future without limitation as to time and contain the word hereafter, or its equivalent, and the verbs are in the future tense, the proviso should be regarded as of a general and permanent character.

"The same construction and interpretation should be applied to

provisos as to independent sections in a statute.

"We have many instances of recent date where such general constructions have been put upon provisos by the Attorneys General.

"The first section of the civil and diplomatic appropriation act of March 3, 1841, contains a proviso limiting the fees of district attorneys, clerks, and marshals in certain cases, which has been construed by Attorneys General Crittenden and Legaré to be a permanent limitation, and not confined to the year in which it was passed nor to the appropriation to which it was annexed.—See Mr. Crittenden's opinion of April 13, 1841, and that of Mr. Legaré of December, 1841, given in answer to certain questions made by the Acting Comptroller;

see also the proviso on the same subject contained in the 167th para-

graph of the appropriation act of May 18, 1842.

The same act (paragraph No. 202) contains certain limitations of compensation to certain officers in the Post Office Department, much of which would have no meaning or operation whatever unless such general construction is given to it. The 212th paragraph of the same appropriation act contains a proviso authorizing transfer of funds from one to another head of appropriation in the Post Office Depart-All, or nearly all, the provisions of law made from 1839 to the present time to prohibit extra compensation, to limit fees and compensation, and to prevent a double compensation, or two salaries, have been contained in appropriation acts.—See the 3d section of the civil and diplomatic appropriation act approved March 3, 1839, which prohibits extra allowances to disbursing officers, and limits expenditures for newspapers.—See the 2d section of the military appropriation act of August 23, 1842, which contains limitations and prohibitions of extra allowances of a more general and extensive character; see, also, section 12 of this same act of August 26, 1842, which contains still further limitations for extra services where one officer performs the duties of another.—See, also, the 4th section of the civil and diplomatic appropriation act of March 3, 1849, (Sess. Laws, p. 68,) which contains a still further limitation as to salaries.

"The appropriation act of September 30, 1850, (Sess. Laws, p. 174,) contains an appropriation for Richard Rush, with a provise attached to it prohibiting the accounting officers in future from allowing any officer two salaries for performing the duties of two offices at the same time. Every word of that provise will be inoperative if it is confined

to the appropriation to which it is attached.

"These numerous provisos and sections of a general character contained in appropriation acts satisfy me that they should be interpreted and construed in the same manner as if each one was contained in the enacting clause of a distinct act."

I have given this opinion of Mr. Whittlesey at length because it contains many important references bearing upon the question. It was submitted at the time to Mr. Attorney General Crittenden, who concurred in the construction placed by Mr. Whittlesey upon the act then under consideration.—(Attorney General's Opinions, vol. 5, p. 273.)

Why the same doctrine was not applied to the act of March 3, 1845, I cannot understand. I confess that I am unable to draw a distinction between the cases; and I feel quite confident that if this law had been submitted at the same time to the Attorney General, he would have given the same opinion in reference to it that he did in the case cited. I concur with him most fully in the construction he gave to the act of 1842, and I have no doubt he would concur with me in applying the same reasoning to the act of 1845.

My opinion, then, is, that the second section of the act of 1845 was intended to be permanent and not temporary; that it is now in force, and must be applied by the accounting officers of the treasury to all

cases coming within its provisions.

The only additional reason which has been suggested for a different construction is the fact that a different rule has been acted upon both in Congress and in this department. I admit the force of this suggestion, and feel great reluctance in overruling a practice that has

continued for so many years.

If I could find any evidence that the question had been the subject of serious consideration, and an opinion pronounced formally upon it and acquiesced in, I should hesitate long before resorting to a new construction of the law. But such is not the case; and I am so fully impressed with the wisdom of the law, and the clearly expressed purpose of Congress to make it permanent, that I must require its enforcement.

The greatest reluctance I have felt in coming to this conclusion arises from the apprehension that injustice may be done to the persons whose claims have thus been recognized, and the officers of the Senate and House, who have acted in good faith in complying with the directions of their respective houses.

I have no doubt that these officers have so acted, and in refusing to settle their accounts no imputation is intended to be thrown upon

their official conduct.

In paying these accounts, they have only done what they were required to do, and what long established usage justified them in doing. Under such circumstances they should be protected from any loss or injury, and I have no doubt Congress will do it. The accounts must be suspended, however, until the meeting of Congress, when I will recommend the passage of a law authorizing the department to pass them.

In this way these officers can be amply protected, a wise and good law vindicated, and a bad practice corrected.

I am, very respectfully,

HOWELL COBB, Secretary of the Treasury.

THOMAS L. SMITH, Esq., First Auditor.

No. 12.

Report of the engineer in charge of the Office of Construction, under the Treasury Department, September 30, 1857.

Office of Construction, September 30, 1857.

Sin: I have the honor to submit the following report of the progress of the various public buildings under my charge during the

year ending September 30, 1857:

On the 30th of September, 1856, the amount in the treasury subject to draft for the construction of public buildings erecting under the Treasury Department was \$9,268,288 25. Congress at its last session authorized the erection of two new custom-houses, six new United States court-houses and post offices, one block of warehouses, one capitol, and one penitentiary, and made further appropriations for works already authorized. The amount appropriated for all these purposes was \$2,582,351 85. Appropriations for public buildings of the description above named have for several years past been accompanied by a contingent sum of ten per cent. to defray the expense of superintendence and for unforeseen expenses not covered by the contract, and also such additional sum as should be necessary to purchase a suitable site.

The appropriations for the following places at the last session of Congress were not accompanied by such contingent amounts, nor with the necessary open appropriations for sites, and will therefore be insufficient to purchase the sites and erect the buildings, viz: Boston; Columbia, South Carolina; Madison, Wisconsin; Memphis, Tennessee; New Orleans, quarantine station warehouses; Raleigh, North Carolina; Tallahassee, Florida; capitol and penitentiary of Washington Territory. At Cairo, the Illinois Central Railroad Company have donated a lot. Unless these additional appropriations are made the works cannot be commenced.

The total amount drawn from the treasury during the year ending September 30, 1857, for the prosecution of the public buildings in progress was \$3,275,533 46. The amount of the estimate asked for last year for continuing these buildings was \$1,433,662 58. From the large balances available for the current year, and from the embarrassed state of the finances of the country, the estimate for the fiscal year ending June 30, 1859, will be but \$1,023,000 for the current year, being \$410,662 58 less than last year, and includes only such sums as are absolutely required to protect the best interests of the government.

The total number of buildings, and the uses for which they were designed, and for which appropriations were made at the last session of Congress, or for which unexpended balances remain of former ap-

propriations, is as follows:

	Old appro- priations.	New appro- priations.	Total.

			34,816 18

Contracts have been made during the past year for the following

buildings, to wit:

Custom-houses.—Portsmouth, New Hampshire; Plattsburgh, New York; Georgetown, District of Columbia; Pensacola, Florida; Galveston, Texas; Galena, Illinois; Dubuque, Iowa.

Court-houses and post offices .- Rutland, Vermont; Windsor, Ver-

mont; Indianapolis, Indiana.

Marine hospitals.—Wilmington, North Carolina; St. Mark's, Florida; New Orleans, Louisiana; Cincinnati, Ohio; Galena, Illinois; Burlington, Iowa.

Miscellaneous.—Boarding station at Pass à l'Outre.

Sites for new buildings have been purchased at the following places, viz:

Custom-houses, &c.—Portsmouth, New Hampshire; Ogdensburg,

Federal Reserve Bank of St. Louis

New York; Perth Amboy, New Jersey; Nashville, Tennessee; Springfield, Illinois; Chicago, Illinois, (additional site); Dubuque, Iowa.

Marine hospitals.—Wilmington, North Carolina; Burlington,

Iowa.

There still remain to be selected sites for public buildings at the

following places, viz:

Knoxville, Tennessee; Baltimore, Maryland; Memphis, Tennessee; Boston, Massachusetts; Columbia, South Carolina; Raleigh, North Carolina; Key West, Florida; Tallahassee, Florida; Madison, Wisconsin; Cairo, Illinois.

All buildings in the course of construction under the Treasury Department are done by contract, except the custom-houses at New Orleans, Charleston, New Haven, and Detroit, the Treasury exten-

sion, and the public buildings in the Territories.

The custom-houses at New Haven and Detroit were given out by contract, but were taken from the contractors under a clause in the contract authorizing the government to take the work into their own

hands if its progress was not satisfactory.

The offers received by the department for the erection of the customhouse at Pensacola were deemed too high; the work was therefore begun by day's labor. Subsequently the lowest bidder finally consented to take the work for the amount appropriated, and it was accordingly awarded to him.

During the past year I have visited and personally inspected a large number of the public buildings, and find the materials and workmanship in most cases in conformity with the conditions and stipulations of the contracts. The superintendents have generally been found capable and attentive to their duties. The disbursing agents have rendered their accounts promptly and satisfactorily.

The advantages of using iron for all purposes to which it is applicable in our public buildings, after nearly five years' experience, are fully demonstrated. The principal iron establishments in our large cities and towns have made themselves fully acquainted with the details of construction in iron, as applied to building purposes, and have provided themselves with machinery, tools, &c., for executing work promptly, and at such reduced rates as almost to bring it in competition in price with stone, brick, and wood. Where much ornament is aimed at, it can be erected in iron cheaper than in stone.

The total amount of iron of all kinds used since January, 1852, on public buildings under the Treasury Department, as ascertained from actual data and estimates, is about 40,000,000 of pounds, and

new uses are still presenting themselves.

The first act of Congress authorizing the construction of a building, either for custom-houses, post offices, United States courts, or marine hospitals, was passed in 1807. It directs the Secretary of the Treasury to erect in New Orleans, Louisiana, "a good and sufficient house to serve as an office and place of deposit for the collector of that place," and appropriates for this purpose the sum of twenty thousand dollars.

The next appropriation for similar purposes was by the act approved March 3, 1817, which provides "for purchasing or erecting, for the

use of the United States, suitable buildings for custom-houses and public warehouses, in such principal districts of each State, when the Secretary of the Treasury shall deem it necessary, for the safe and convenient collection of the revenue of the United States, fifty thousand dollars." From this time forward, till 1850, with the exception of Boston, New York, Charleston, and New Orleans, no very large appropriations were made for public buildings. By reference to table 4, appended to my report, it will be seen that the entire amount thus expended for the first forty years after the system was inaugurated, did not exceed the amount expended during the past fiscal year. From 1850 to the close of the last session of Congress, the amount appropriated for this purpose has been \$18,030,572 17, and the gross amount since 1807 is \$22,675,680 55.

The total number of buildings, &c., is as follows, viz:

Custom-houses bought, built, or	in course	of cons	truction	-	67
Court-houses		-		-	13

			7		
Making a total number of -	-	_		-	187

The total amount expended, including sites, and the estimated amount yet required to complete those in course of construction, is

\$31,662,415 03.

If it is the settled policy of Congress to erect buildings for the accommodation of federal officers in the different States, I would respectfully suggest that some system be adopted by which a more equal distribution may be made among the several States, and a just discrimination between the cities and towns of each State, based upon

the actual need of such buildings.

Within the last five years expensive custom-houses and post offices have been erected by the government, the joint revenue from which does not pay the expense of collection; and marine hospitals maintaining a corps of physicians, stewards, nurses, and other employés, outnumbering the patients. The records of the Treasury Department furnish the means of avoiding such ill-advised and injudicious expenditures. The amount of revenue collected, and the number of persons necessarily employed in its collection, would be a safe guide as to the necessity of erecting a custom-house or post office, and would regulate the size; and the number of patients accommodated would, with equal certainty, point out the proper location and size of marine hospitals. There is positive injustice and cruelty done to diseased and disabled seamen by the present mode of locating these buildings. The money for supporting the hospitals is taken from the hard-earned pittance of the sailor, forming a common fund to be used at any point where it may be required. The physicians, nurses, &c., of those hospitals that are without patients are paid from this fund, although the post to which it belongs may not contribute a tithe of the expense of

maintaining the establishment. This is unjust. It is cruel to the sailor, who has a broken limb or other injury, to send him to a hospital where he will probably contract, and possibly die of, some miasmatic disease. Under the present system, hospitals have been located in such places; while at other points, where hundreds of disabled seamen are annually accommodated, no hospital has been

provided.

The duty of erecting these buildings devolves upon the Secretary of the Treasury, but he has no voice in designating the points at which they shall be located. No provision is made by law to enable him to discharge the duties assigned him in the construction of these buildings. The present bureau or office of construction, to which, under the Secretary of the Treasury, this duty is assigned, exists, from necessity, without special authority of law. The large amounts appropriated annually for the erection of public buildings require, if the system is to be continued, a permanent organization of the office charged with the expenditures of the money so appropriated.

Having been entrusted with these duties for nearly five years, I feel justified in saying that economy, and the prompt, efficient discharge

of the business of the office, require that this should be done.

There should be a bureau of construction authorised by law, and a competent person permanently appointed as its chief, with an assistant, an architect and an assistant, chief clerk, and as many assistants as the proper discharge of the duties may require. There should also be a general disbursing agent, who, in addition to disbursing for works in Washington now under the Treasury Department, and for local payments of distant works, should, under the chief of the bureau, examine and adjust all accounts, claims, and estimates for the various works, and refer them to the proper office for settlement; and a computer, whose duty it shall be to estimate the exact cost of each building offered for contract, so that when the bids for the work are reviewed, there may be in the hands of the department a standard by which to measure the bids offered. Draughtsmen, to copy the plans of the architect, should be employed, so long as their services are required, to complete the drawings of all buildings directed by Congress to be erected.

This is respectfully recommended, to systematize and give lawful authority for duties already informally devolving on the office, and I am confident it would lead to their more efficient and economical administration.

CUSTOM-HOUSES, &c.

BATH, MAINE.

The building designed to be used as a custom-house and post office, in Bath, Maine, is completed, but cannot be occupied until it is furnished. An appropriation will be required for this purpose, the amount of which will be named in another place. The building is

faithfully built, and looks well. An appropriation of \$10,000, for fencing and grading, was made by the last Congress, and the work will be contracted for and probably finished this season. The old custom-house at this place belongs to the United States, and is no longer needed. I respectfully recommend that it be sold, and the proceeds used to purchase furniture for post office, custom-house, and court room.

Total amount of appropriation	\$99,000° 90,862	
Balance available for building, fencing, and grading	8,137	09

No further appropriations will be required to complete these objects.

BELFAST, MAINE.

The building designed for the post office and custom-house at Belfast is so far completed as to be occupied. Some unimportant omissions on the part of the contractors are being supplied. Congress at its last session made an appropriation of \$5,000 for fencing and grading the site. Contracts for this work will be made, but the work will not probably be completed before the coming season.

Total amount of appropriation	$\$34,450 00 \\ 25,097 70$
Balance available for the completion of the work	9,352 30

The amount available will be sufficient to complete all the unfinished work.

BANGOR, MAINE.

The building designed for the accommodation of the United States

court, post office, and custom-house, is completed.

This building is situated on a mud bank, in the Kenduskeag river, and is approached by two stone bridges. One of these has given way, and a contract for repairing is now in course of execution, and will be completed before the setting in of winter. An appropriation of \$5,300 was made by Congress to bridge over the entire river between this building and the two adjacent shores. It was understood that the owners of property fronting the custom-house should contribute \$5,000 towards defraying the cost of these bridges; this they have, so far, failed to do, and no steps have consequently been taken towards the commencement of the work. I can see no advantage in these bridges, except to the owners of the adjoining shores, and therefore respectfully suggest that no further steps be taken towards building them; indeed, without the \$5,000 promised by the property holders, the sum appropriated will be whelly inadequate to do the work.

ELLSWORTH, MAINE.

The building designed for a custom-house and post office at Ellsworth was not commenced until last May, although an appropriation for the object was made two years before, and the contract given out. The contractor soon after became deranged, which delayed the commencement of operations. At the time of my last inspection, in May, the cellar walls were raised to the level of the underpinning, but the masonry was so badly laid that it was ordered to be taken down to the foundation stone. It has since been rebuilt in a substantial manner. The walls are now ready for the roof, and it is expected to get it under cover this fall, and completed by spring.

Total amount of appropriation	\$18,500 00
Amount expended to September 30, 1857	11,248 07
Balance available for the completion of the work	7,251 93

The amount available will be sufficient to complete the building. The sum of \$3,500 will be required to fence and grade the lot, and to furnish the post office and custom-house offices.

PORTLAND, MAINE,

The building designed to be used for a custom-house, post office, and United States court, in Portland, is completed, furnished, and occupied by the various officers of these different departments. It is well built, and presents a fine appearance.

Total amount of appropriations	\$398,431	71
Amount expended to September 30, 1857, in the pur-		
chase of original building, and in the construction of the new one	394,792	81
Balance available	3,638	90

No further appropriation will be required for this work.

WALDOBORO', MAINE.

The custom-house and post office building at Waldoboro' is finished. On a recent inspection of this work, I found much of it done in an imperfect manner, and not in conformity with the contract. The furnace was badly built, and is much cracked. The cellar was wet; the cellar walls badly built; the windows of the cellar unfinished, or not finished according to the contract. The tiles in the vestibule were inferior in quality and badly laid. The plastering in the vestibule and post office was also inferior in quality. The appearance of the entrance story was discreditable, being filthy, and looking as if wholly neglected.

Total amount of appropriation	\$25,000 00 23,013 12
Balance available	1,986 88

I would respectfully recommend that a portion of this balance be expended in resetting the furnace, opening a drain to the cellar, finishing the windows of cellars, resetting tiles, and repairing plastering. Should there be anything left of the appropriation after these repairs are completed, it could be advantageously expended in grading and completing the enclosure of the ground.

PORTSMOUTH, NEW HAMPSHIRE.

The building designed to be used for a custom-house, post office, and United States court has been commenced; the contractors, however, have made but little progress. This is one of the cases where the interests of the United States are prejudiced by giving the contract to the lowest bidder. In the scramble after government contracts men are always to be found who will bid the work down to the lowest figure at which it can be done, and even below what it can possibly be done for, depending upon slighting their work, using inferior materials, alterations, extras, &c., to make up the deficiency. The result is, that so soon as they find that they are compelled to furnish materials and do the work as required in the contract, they either abandon the work or force the government to take it off their hands, as provided in the contract, and execute it at the expense of their bondsmen and themselves. This I fear will be the case in the present instance. But little is done to this building beyond excavating the cellar, commencing the drain, and the collection of a small amount of stones for the cellar walls.

Total amount of appropriation	$\$116,300 00 \\ 21,716 89$
Balance available for the completion of the work	94,583 11

BURLINGTON, VERMONT.

The custom-house and post office at Burlington, Vermont, is completed and occupied. An appropriation for furnishing and for fencing and grading will be required, which will be found in an estimate attached to this report. The building is of brick and looks well.

Balance available	37,665 67
old custom-house lot, estimated at	50,000 00

NEW HAVEN, CONNECTICUT.

The building at New Haven, Connecticut, designed for a customhouse, post office and United States court, was given out by contract. The contractor, having failed to make satisfactory progress with the work, was notified that unless he complied with the stipulations of the contract provided for such cases, the work would be taken from his hands and finished by the United States on his and his sureties account.

This notice producing no favorable result at the end of the period

named in the contract, the superintendent was directed to enter upon

the work. It is now progressing by hired labor.

The work has advanced less rapidly than was expected and is raised to the floor of the third story. It was expected to have been covered in this winter, but it is now evident that it will not be accomplished. Nearly all the stones for the remainder of the building are on the ground and will be cut during the winter, so that the work will advance rapidly in the spring and be finished early in the ensuing fall.

Balance available for the completion of the work 28,182 42

BUFFALO, NEW YORK.

The building designed to be used as a custom-house, post office and United States court is rapidly drawing to a close, and it is hoped that it will be completed this year. This building is of the same material

as the one at Cleveland, and shows remarkably well.

Congress at its last session, after this building was far advanced, made an additional appropriation for enlarging it by the addition of an L. This addition would be made only in one direction, and the price asked for the required land was deemed extortionate, and nothing has yet been done to carry out the wishes of Congress. The original purchased corner lot, 140 feet by 125 feet, cost \$40,000; the lot offered for the enlargement is not a corner lot, and is 36 feet by 132 feet, and the price asked, \$25,000, being more than double the price per superficial foot than the original corner lot. As this enlargement is designed for the custom-house, and as the business of that office can be more conveniently done near to the harbor, (the present site being nearly in the centre of the city,) and as a suitable lot can be procured for less than half the sum asked for that adjoining the present site, and a building better suited for the purpose can be put up for less money, I respectfully suggest the propriety of requesting Congress to authorize the change.

Balance available for the completion of the work..... 151,062 89

OSWEGO, NEW YORK.

The building designed for a custom-house and post office at Oswego, New York, is raised to the height to receive the roof, which it is hoped will be put on before cold weather sets in, so that the finish of the interior may go on this winter. The building is of cut stone, from the same quarries as that at Buffalo, and looks well. It is expected that it will be entirely finished by spring.

Balance available for the completion of the work.... 28,273 13

OGDENSBURGH, NEW YORK.

A site has been selected at Ogdensburgh for a custom-house, post office, and United States court. The title has been examined and found to be good. Jurisdiction has been ceded by the legislature of New York, and it has been exempted from taxation. There now remains nothing to consummate the purchase but the payment of the purchase money.

The season is so far advanced in that climate as to forbid the commencement of the work this fall. The contractor is making prepara-

tions for commencing early in the spring.

Balance available for the completion of the work..... 109,345 65

PLATTSBURGH, NEW YORK.

The building designed as a custom-house and post office in Plattsburgh was commenced in April of this year. At the end of September it was ready to receive the roof, and will probably be finished before the 1st of January next. It is of brick, entirely fire-proof. From the effects of a flood in a stream that crossed the lot, it was deemed prudent to put in a very large drain to carry this water to the river. The expense of this, and the extra depths to which it was found necessary to sink the trenches to get a permanent foundation, will make the cost of the building slightly exceed the appropriation. The lot will require fencing and grading, and the building furniture. An estimate of these amounts will be found in another place.

Amount expended to September 30, 1857	

Balance available for the completion of the work..... 37,118 10

PETERSBURG, VIRGINIA.

The building designed for a custom-house and post office at Petersburg, Virginia, has not made satisfactory progress since my last annual report. The delay is attributed to the difficulty of procuring granite as fast as it was required. This season this difficulty has, to some extent, been overcome, and during the latter part of the summer better progress was made. Congress at its last session made an additional appropriation for a third story; but for this the building would now have been nearly or quite ready for the roof. The walls are nearly all raised to the lintels of the second story. There is a considerable amount of granite cut and ready to be set. It is not probable that the building will be covered this winter. If sufficient rough stone can be obtained the stone work can all be cut during the winter, and the work will go up rapidly as soon as the spring opens.

WHEELING, VIRGINIA.

The building designed for a custom-house, post office, and United States court has progressed during the season satisfactorily.

The walls are raised to the belt course of the second story, and with favorable weather the building may be nearly or quite ready for the roof before the close of the working season. It is expected that the balance of the stones required will be cut during the winter, and the iron work and carpentry so far finished that the whole may be completed early in the summer of 1858.

Total amount of appropriation	\$117,300 00 77,102 97
Balance available for the completion of the work	50,197.03

CHARLESTON, SOUTH CAROLINA.

The new custom-house at Charleston, S. C., has not progressed as rapidly as was expected or could be desired. The chief cause of its retardation is the difficulty of getting marble of suitable quality as rapidly as it is required. The building is very large, and as none but the very best quality of marble is received, it tasks all the quarries furnishing the right description of marble to their utmost capacity to supply it as fast as it could be worked into the building. In quarrying marble for such a building, the blocks taken from the quarry must be used for the part of the building for which they are best suited, without regard to what part of the building it may be. When a block is taken from the quarry suitable for a capital, architrave, window jamb, door jambs, &c., (all difficult stones to get,) it is cut for that purpose, though it may not be required until near the completion of the building. In this way, although the structure is not raised as high as it was hoped it would be at this time, yet a very large amount of the most difficult and expensive part of the marble is on hand, ready to be put up at the proper time. This accumulation of material will enable the superintendent to push the work more and more rapidly as it ascends. The basement story is up, and the main entrance story is raised generally to the height of the pediment heads of the windows, and the marble backed up with bricks. About onehalf of the groined arches of the principal story are turned. A portion of most of the columns and pilasters have been set. The superintendent estimates that there will be required for the year ending June 30, 1857, an appropriation of \$100,000. He expects to finish the

building by the end of September, 1860.

MOBILE, ALABAMA.

The building designed to be used for a custom-house, post office, and United States court rooms is nearly completed. The frame for the iron roof is on, and the galvanized iron was about to be put on. A few of the partition walls are still unfinished, but will soon be completed. All the iron window shutters have been received and a portion of them put on.

The finish of the interior will go on without delay, and the building

be completed this fall.

Total amount of appropriation	\$360,000 00 287,102 85
Balance available for the completion of the work	72,897 15

PENSACOLA, FLORIDA.

The commencement of the building designed for a custom-house, post office, and court rooms was deferred for nearly two years in consequence of all the offers for the contract being beyond the amount appropriated. The contract was finally given out on the 6th of July, 1857, and the work is far advanced towards completion. The superintendent expects to have the roof on by the 15th of November, and the entire building completed and ready for occupancy by March, 1858.

Total amount of appropriations	\$38,500 00 18,651 67	
Balance available for the completion of the work	19,848 33	

NEW ORLEANS, LOUISIANA.

The progress of the building designed for a custom-house, post office and United States court rooms at New Orleans has not been as rapid as would have been desired owing to the difficulty of procuring the marble and iron as fast as they were required. The building is so far advanced that the apartments designed for the revenue service are occupied and give great satisfaction and increased facilities for the transaction of business. The granite work of the exterior is still kept back until the work of the interior is sufficiently advanced to form a counterpoise. The granite steps of staircases of Nos. 1, 3 and 4 are well advanced. Six hundred and eighteen lineal feet of tubular girders have been set therein, and about one thousand lineal feet of 36-inch manufactured beams.

The beams in the third story corridors are set and about two thirds of the segmental arches are turned. Six heavy iron doors in first and second stories are hung. The marble walls in the collector's room have kept pace with the receipt of materials, and are generally brought up to the level of the consols and cornice pieces of the upper tier of windows.

The brick work has been confined to the segmental arches of floor and

to backing of marble.

The building still continues to settle, but with a diminished ratio, as the accompanying table shows. Whether this decreased ratio (as compared with former years, when more weight was added in a given time than has been added this year,) is due to the less weight added, or to the fact that it has reached firm ground, cannot be ascertained with accuracy.

Maximum	settleme	nt since	December	6, 1851.		$19_{\frac{3}{10000}}$	inches
Minimum	"	"	"	ii ii		$11_{\frac{29}{100}}$	"
\mathbf{Mean}	"",	. "		"		$15 \frac{67}{100}$	"

The balance in hand will be more than sufficient to complete the building.

DETROIT, MICHIGAN.

The building designed for a custom-house, post office, and United States court rooms, was given out by contract. Previous to its commencement Congress appropriated \$30,000, and ten per cent. for contingencies for enlarging the building. The terms of the contract provide that, in case of an addition or omission of any items in the building, the value of such addition or omission shall be estimated by the superintendent pro rata with prices in the original contract for similar articles, and added to or deducted from the contract price, as the case may be. When this building was enlarged, the cost of the increased size was estimated in this manner: The contractor refused to go on with the work for this price, and being notified, as provided in the contract, failed to fulfil the conditions of the notice within the time specified, and the work was, in conformity with the provision made and provided for such case, taken into the hands of the superintendent, and is being executed by days' work. The excavations have been made and the foundations are commenced. A large amount of stone is being collected, and will be cut during the winter. If the remainder of the fall should prove favorable for out door work, the whole of the cellar wall should be finished.

mount expended to September 30, 1857......

50,000

CHICAGO, ILLINOIS.

Balance available for the completion of the work....

The first appropriation for the location of a suitable site and for the erection of a building to accommodate the custom-house, post office, and United States court rooms, at Chicago, was made in 1854, and a building supposed to be large enough to accommodate the business of these offices was designed, and a contract for its erection executed. Owing to some delay in the purchase of the site and getting finished the next year, the business of the post office had so far increased as

to render the place too small. Congress made an additional appropriation, and ordered the plan to be enlarged, which was done.

The ensuing Congress again ordered an enlargement, and appro-

priated the required amount.

The building was then commenced. The excavation of the cellar is completed, the concrete laid, and part of the foundation wall laid.

The second enlargement rendered the purchase of additional land necessary, which has been conditionally done. The part of the building extending over this last purchase cannot be carried forward until the legislature of Illinois shall cede jurisdiction—the jurisdiction over the first lot purchased extending only to its limits. To expedite the work, I respectfully recommend that Congress be requested to suspend the operations of the law of September 11, 1841, upon the city giving bonds that the jurisdiction will be ceded, as was done last year in the case of Dubuque, Iowa. The contractors have a large amount of material on hand, and will cut much of the stone this winter. From their energy and acquaintance with their business, there is reason to expect that the work will progress rapidly next season.

Total amount of appropriation	\$414,900	00

Balance available for the completion of the work..... 348,373 29

GALENA, ILLINOIS.

The building for the use of the custom-house and post office, at Galena, Illinois, was commenced early in the summer. In sinking the cellar, the soil, which on the surface was solid, proved to be a deposit of soft mud, and rendered piling indispensable to secure the building from cracking. This considerably increased the expense and causes loss of time.

The same difficulty as in the hospital at this place was encountered in getting suitable stone, which had to be brought from Nauvoo. The piles have been driven, and a platform constructed on them; the sub-foundation wall commenced and carried up some three and a half feet in height of the west wall of the basement, and from eight to ten feet at the sides; 120 feet of the drains have been constructed; 2,000 feet of block stone from Nauvoo received; 25,000 common brick delivered on the ground, and a large portion of the door and window frames and sashes have been prepared. The utmost that can be expected to be accomplished this season will be the completion of the cellar walls. During the winter the stone on hand may be cut, and the work begun in the spring with more energy. In consequence of the piling for foundation and extra cost of stone, a further appropriation will be necessary to complete the work.

Total amount of appropriation	\$71,500	00
Amount expended to September 30, 1857	23,251	79

Balance available for the completion of the work..... 48,248 21

DUBUQUE, IOWA.

When the excavations were made for commencing the building designed for a custom-house, post office, and United States court room, at Dubuque, a deep quicksand was encountered, which rendered it necessary to sink the foundations considerably deeper than was provided in the plans and contract, and materially increasing the cost of the structure, and at the same time seriously retarding the work.

The contract calls for the use of suitable stone "from the vicinity." A careful inspection of the stone found in the neighborhood has proved it to be entirely unsuited for such a building, and the nearest stone that would answer were at Nauvoo. The additional expense of bringing this material from so great a distance will be considerable, and, as Nauvoo cannot be considered "in the vicinity of Dubuque," should be borne by the United States. The loss of time in hunting up a suitable quarry, and the extra depth of the foundation, will make the amount done this season inconsiderable.

The excavations are complete and a portion of the foundations in,

and it is probable the cellar walls will be completed this fall.

MILWAUKIE, WISCONSIN.

The building at Milwaukie, designed for a custom-house, post office and United States court rooms, has advanced satisfactorily. The walls are raised to their full height, and the form of the root on. The roof will soon be completed, and the work on the interior will be finished this season.

This building is of Athens marble, a beautiful stone, of stone or cream color, and has a very imposing effect.

ASTORIA, OREGON TERRITORY.

There is an appropriation of \$40,000 for the erection of a custom-house at Astoria, Oregon Territory. Nothing has been done towards the commencement of this building beyond preparing the plans and getting the site. The site was procured by exchanging land belonging to the United States for the lot in question. The reason for not commencing this building was the receipt of information that little or no revenue was, or ever could be, expected to be, received at this point—some

other port in the neighborhood having diverted foreign trade entirely-from Astoria.

MEMPHIS, TENNESSEE.

Proposals have been received for lots in Memphis from which to select a site for the building designed to be used for a post office and United States court. The sum of \$50,000 was appropriated for the purchase of a site and the erection of the building. This is wholly inadequate; one of the sites offered, alone, exceeds the appropriation \$25,000, and all of them are so near the amount appropriated as to leave a balance entirely too small to erect a suitable building. I would respectfully suggest that, as there are no United States courts held at Memphis, if Congress see fit to increase the amount sufficiently to purchase a site and erect the building, that they be requested to allow the rooms designed for the court to be appropriated to the use of a custom-house.

Total amount of appropriation	\$50,000 00 20 00
Balance available for the completion of the work	49,980 00

SPRINGFIELD, ILLINOIS.

A site for a building designed to be used for a post office and United States court rooms was selected by the late Secretary of the Treasury. An act was passed by the legislature of Illinois ceding jurisdiction over the same and exempting it from taxation. The title has been certified as valid by the Attorney General. Nothing now remains to consummate the purchase but the payment of the purchase money.

The season is too far advanced to make contracts for the work with

any probability of beginning operations before spring. Contracts can be made this winter in time to enable the contractors to begin early

in the spring, if the proposed enlarged work is authorized.

At the instance of members of Congress from Illinois, at the last session, the late Secretary of the Treasury directed plans to be prepared of a size requiring an additional appropriation, and proposals for construction were received, and the bids opened and examined, but the necessary appropriation was not made by Congress. If no further appropriation is made for the purpose, new plans will have to be prepared of a smaller sized building; but it is represented that such smaller size would be insufficient for post office uses.

Total amount of appropriation	\$61,000 00 7,035 43

ST. MARKS, FLORIDA.

The building designed for a marine hospital at St. Marks, Florida, was commenced during the present summer. The position of this hospital is such, on the flat lands bordering the Gulf of Mexico, as to expose it to the violence of gales during the autumn. The site selected is in the old Spanish fort, by which it is to a great extent

protected from the waves.

Additional protection is sought to be obtained by making the foundation wall sufficiently thick to resist the action of the waves, and rising high enough to secure the lower story from being flooded with This foundation is completed; it is built of cut stone from the ruins of the old bomb-proof. As most of the other materials are drawn from the north, the work was stopped until vessels could safely venture into that channel in the fall. A large portion of these materials will be shipped by the end of November, and the building will then be rapidly urged forward, and can be completed in a few months.

Total amount of appropriation		\$22,000 00

Balance available for the completion of the work	20,963 14

NEW ORLEANS, LOUISIANA.

The building designed for the accommodation of sick and disabled sailors at the port of New Orleans has been prosecuted with vigor during the past season. The walls, roof, beams, girders, window and door dressing, are all of iron. The spaces between the upright iron posts that form the framework of the building are to be filled with some non-conducting substance, thus removing the most serious objections to a house entirely, or in a great part, iron. The foundation of the building is completed, and a large quantity of the iron has been delivered on the ground. Having been fitted at the foundry, it can be rapidly put up. Before commencing the foundation, experiments were made to test the sufficiency of the soil to sustain the building. It was found that the soil was so compressible that piling would be necessary for the whole building, and a foundation of piles has accordingly been made, which, it is believed, will secure it from all liability to settle or crack. This has been an expensive job, and will cause the rest of the building to overrun the appropriation. From the rapidity with which iron buildings may be put together, there is good reason to think that the contractors will be able to complete the building before the time specified in their contract, viz: July 1, 1859.

Total amount of appropriation	\$436,459 90,519	
Balance available for the completion of the work	349,939	89

ST. LOUIS, MISSOURI.

The marine hospital at St. Louis is finished and occupied. An appropriation was made by Congress, since its completion, for fencing, grading, and draining the lot. The fencing and grading cannot be commenced until the city shall have established its grades. A sewer for draining has been ordered to be commenced, and will, it is presumed, be completed this fall.

Total amount of appropriation	$$61,625 \\ 52,515$	
Balance available for the completion of the work	9,109	38

CINCINNATI, OHIO.

The work on the marine hospital at Cincinnati, Ohio, was com-

menced as soon after the appropriation was made as practicable.

Upon sinking the foundation quicksand was encountered, although the site is on the side of a high hill, where the work in many places comes to the surface. As the foundation had to be sunk below this sand, orders were accordingly given and the trenches were excavated to an average depth of thirty feet below the line originally designed for the foundation. This increased depth and the difficulty of excavating quicksand, will cause the building to exceed the appropriation, and the amount required to meet this unexpected work will be included in the annual estimate. The foundations are now well advanced, and it is hoped that the walls of the cellar will be nearly or quite completed this fall.

GALENA, ILLINOIS.

The building intended for a marine hospital at Galena, Illinois, has not advanced as rapidly as was expected or desired. The causes which have retarded its progress, principally, are the same difficulty in procuring suitable stone as was experienced at the neighboring city of Dubuque, as the stone had ultimately to be brought from Nauvoo; and the great difficulty in procuring suitable bricks. The excavations of the cellar and cisterns had to be made through rotten rock, instead of stone, as it was supposed. These difficulties have been overcome; the sub-foundation walls are all laid, the main drain constructed, small cistern, containing 10,000 gallons, built and covered; excavation of large cistern made, underpinning stone cut and ready to be set, door and window frames, sashes and doors, and a portion of the inside mouldings, are finished. It is hoped that the walls of the cellar and large cistern may be completed this season.

TREASURY EXTENSION.

Since the date of my last annual report the excavation for the cellar and foundations of the west front and the west end of the north wing have been completed, and the concrete foundations for the west front, and for the area walls of that front, and the west end of the north wing, have been put in. In all cases the foundations were ready for receiving the walls as fast as the stone were ready to be laid, and as soon as the weather would allow building operations to commence. effect this, and also to enclose and secure as much of the south wing as possible, the work was prosecuted during the winter by taking advantage of every favorable day, and protecting the fresh-laid concrete and other masonry from the injurious action of the frost; and notwithstanding the unusual severity of the weather and the wetness of the spring, with so much success, that subsequent examinations have shown that the quality of the work was in all cases good, and in many quite superior. By this course the foundations were prepared on the opening of the spring, and those parts of the south wing that were unfinished and exposed completed and secured.

The cellar walls and area walls of the west front were commenced

on the opening of the season, and have been carried on as fast as the stone for the first course for the main walls could be furnished. These could not be supplied as rapidly as could be wished, from the fact that all are required to be headers to reach entirely through the wall, and of nearly uniform size, which made it impossible for the quarry men to furnish the stone as fast as ordered. The cellar walls for the south part of the west front, and the middle and east portion of the centre and north part of the west front, have been completed, and the arches turned for the floor of the basement. The area walls of the west

front and the west end of the north wing are also completed.

In the south wing (in which the ashlar of the basement was completed to the belt course, as stated in my last report, and the brick backing carried to the height for receiving the iron beams) the iron beams have been laid, the arches turned for the floors of the entrance story, and the granite stairways to that story completed. The granite columns for the south portico and the heavy granite caps and lintels for the doorways of the basement under the porticoes have also been laid, and the arches turned for the floor of the portico. All the arches are now covered with asphaltum, which has permitted the walls of the rooms in the basement to be plastered. The iron door and window frames have been set and fitted in the cellar and basement, and the window sash glazed and put in their places, so that the rooms of the basement will be completed during the winter. The iron columns, antæa, and architraves, for the entrance story have been delivered, and enough of them set in their places to allow the ashlar and brick work of the range of rooms on the east side of that story to be covered with the brick arches and enclosed. These rooms are now occupied as offices for draughtsmen, clerks, &c.

The heavy granite antæa for the east end of the south wing have been successfully raised and set in their places without accident, and the balance for that wing are being delivered and set as fast as the nature of the work will admit, so that it may be safely assumed that all those required on the east part and portico of the south wing will be set in their places, and the windows, and fillings between them, completed by the middle of December, if the weather will permit.

The cast-iron columns and antæa for the basement of the west front have been delivered, and the necessary wrought-iron beams for the

south wing.

A large supply of cut granite for the basement of the west front and for the upper stories of the south wing is on hand, as also rough stone for cellar walls, with sufficient brick, sand, and cement, for the remainder of the season, and for two or three months in the spring.

For the operations of the current year it would seem to be advisable for the proper protection of the work done, and to afford the necessary accommodations for the public offices, that the work on the south wing should be pushed forward vigorously so that it may be completed as to its walls and roof before the winter of 1858 and 1859, and that the work on the west front be steadily prosecuted at the same time to complete the cellars and basement story.

The work for delivering the stone for the rest of the building should

not cease in the meantime, but sufficient quantity should be delivered on the ground to keep the work in a steady course of progress. To do this to the best advantage to the government will require an additional appropriation for the next fiscal year of \$375,000.

Total amount of appropriations	\$1,200,000 579,047	$\begin{array}{c} 00 \\ 26 \end{array}$
Balance available for the continuation	620,952	74

LIGHTING AND VENTILATING THE TREASURY.

The work on lighting and ventilating the Treasury building since the 30th September, 1856, has been prosecuted mainly in the winter in excavating the trenches for the draining and ventilating arches under the rooms and passages in the basement, and in building and completing the arches, pavemented floors for the main and cross halls, the western ranges of rooms in the main front building, and the two ranges of rooms in the back wing.

The effect intended appears to have been produced, and the rooms and halls of the whole basement are reported as pure and dry. The water tanks, and arrangements for supply of water for the necessary conveniences in the building, have been completed and improved.

Total amount of appropriation	\$39,640 24,467	
Balance available	15,172	69

Additional appropriations are immediately necessary to furnish the buildings, and to fence and grade the grounds, at the following places, viz:

At the New Orleans marine hospital	\$6,000
Portland, Maine, marine hospital	8,000
Burlington, Iowa, marine hospital	3,000
Plattsburg, New York, custom-house	6,000
Buffalo, New York, custom-house	7,500
Cincinnati, Ohio, custom-house	
Burlington, Vermont, custom-house	1,500
Ellsworth, Maine, custom-house	3,500
Norfolk, Virginia, custom-house	2,500
Newark, New Jersey, custom-house	2,500

There will be required for the fiscal year ending June 30, 1859:

There will be required for the fiscal year ending of the 30,	, 1000.
For the continuation of the Treasury extension	\$400,000
For the continuation of the New Orleans custom-house	350,000
For the continuation of the Charleston custom-house	100,000
For the annual repairs of custom-houses	15,000
For the annual repairs of marine hospitals	15,000

Owing to an increase of cost, from causes which could not possibly be foreseen, additional appropriations will be required to complete the public buildings at the following places, viz:

For the marine hospital at Cincinnati, Ohio, owing to the	
necessary increased depth of foundations for thirty feet in	*10 *00
quicksand	\$48,500
For the marine hospital at New Orleans, in consequence of	
the increased cost of the foundations	54,000
For the custom-house at Galena, Illinois, from the neces-	
sity for piling foundations and increased cost of suitable	
stone	10,000
For the custom-house at New Haven, Connecticut, in conse-	
quence of the default of the contractors	20,000
-	

Appended to this report will be found six tables exhibiting, in tabulated form, various details of the business of this office, viz:

Table I. List of custom-houses and marine hospitals built or pur-

chased prior to 1850.

Table II. List of custom-houses, court-houses, post offices, marine hospitals, and miscellaneous works, constructed since 1850, together with those now in course of construction, and those for which appropriations have been made, but the work not yet commenced.

Table III. List of public works asked for by members of Congress, for which no appropriations have been made, and their estimated or

probable cost.

Table IV shows the amount disbursed in each year since 1807 for

the various public works under the Treasury Department.

Table V gives the names of the local superintendents and disbursing agents for all the works now constructing, with their rates of com-

pensation.

Table VI shows the location and nature of each work purchased, constructed, or constructing; the total appropriations for each; date of purchase and cost of sites; amount expended, amount available, and amount required for completion of each; date and amount of each contract, time of completion, and total cost.

All of which is respectfully submitted.

I have the honor to be, very respectfully, your obedient servant, A. H. BOWMAN,

Engineer in charge, Treasury Départment.

Hon. Howell Cobb, Secretary of the Treasury.

	State.	City,	Superintendents.	Rate of compensation.	Disbursing agents	Rate of compensation.
Do		New Orleans branch mint. New Orleans warehouses.	G. T. Beauregard	No compensation.	A. G. Penn	16 00 per day.
New Mexico		Public buildings	J. Houghton		W. W. H. Davis	

Note.—Those disbursing agents whose rate of compensation is stated at \$400 per annum, are collectors, whose compensation is fixed at 2½ per cent. on the amount disbursed, provided such per centage, in addition to the per centage received for light-house and all other disbursements, does not exceed \$400 per annum. Generally, where there is a collector at the location of a work, he is appointed disbursing agent, but at New Orleans, and a few other places, a separate disbursing agent is employed.

A. H. BOWMAN, Engineer in charge, Treasury Department.

F. BIGGER, Register.

No. 14.

Office of the Louisville and Portland Canal Company, Louisville, November 25, 1857.

Sin: I have received your communication of the 4th instant, and in accordance with your request I hereby submit a report on the condition of the Louisville and Portland canal, "embracing such facts and information as may be useful and interesting to the public."

I proceed, in the first place, to state the attitude of the work as re-

gards its custody and management.

At the instance of the stockholders of the company, the legislature of Kentucky, in February, 1842, so amended its charter as to authorize the board of president and directors to appropriate the net income of the company to the purchase of the stock owned by individuals in the same, the object being to extinguish, by this process, the individual stock held in the company, and then to offer the custody and management of the canal to the United States, the State of Kentucky, or the city of Louisville, on condition that such one of the parties mentioned as may accept the same "shall levy tolls only sufficient to keep the canal in repair, and pay all the necessary superintendence, custody, and expenses, and make all necessary improvements, so as to answer the purposes of its establishment, and protect and guard the interests of commerce."

The company accepted this amendment of its charter, and the board from year to year appropriated the net income of the canal to the purchase of the individual stock, until, on the 31st January, 1855, the amount on hand being sufficient to extinguish all that remained, I announced to the department the readiness of the board to tender the custody of the canal to the United States upon the conditions prescribed by the amended charter. The department replied that there had been no legislation authorizing its acceptance of the canal, and requested that the president and directors should each retain one share of stock, so as to remain eligible for a continuance in office, and still hold and manage the canal, under the provisions of its charter, until authority might by law be conferred on the department to receive it. This request was complied with, and the work remains in charge of the board, which continues to manage it with strict reference to the requirements of its charter.

I proceed now to state the operations of the canal since the date of the final liquidation of the individual stock, except the one share each, still held by the president and directors, to wit, on the 31st January, 1855.

The board at once reduced the toll from fifty cents to twenty-five cents per ton, believing that the latter rate would be sufficient to raise the sum required to defray the ordinary expenses of the canal, and make certain much needed repairs and improvements.

The contemplated repairs and improvements were: Two basins or passing places on the line of the canal; an embankment at its head 20 feet high and 500 feet long, with a stone wall to support it; removal of sediment two feet in depth throughout the entire length and width of the canal; blasting off and removing the ledges of stone from

each side, the ledges being from three to ten feet wide and averaging six feet in thickness; re-paving the slopes of the banks; taking down and rebuilding a lock wall; taking down a heavy stone arched bridge and substituting a moveable pivot bridge; building a guard gate near the head of the canal; building two abutments at the lower locks, and excavating and removing 500 feet from the north side of the canal at its head.

These improvements have been completed, except the guard gate, the removal of ledge stone from the walls and slopes, and the excavation and removal of 500 feet from the north side of the canal at its head.

The board has purchased a portion of the ground required for the construction of the projected branch canal in the town of Portland, and is at present negotiating for the remainder.

The following statement shows the receipts and disbursements of the canal since January 31, 1855:

Cash on hand January 31, 1855	\$ 5,148	63
1855	94,356	19
Cash received for stone and old iron sold	748	
	100,253	60
Cash paid for repairs, expenses, and improvements	49,154	
Balance on hand January 1, 1856	51,099	08
Tolls received in the year ending December 31, 1856	75,791	
Cash received for stone and old wheelbarrows sold	501	
	127,391	93
Cash paid for expenses, repairs, and improvements	126 ,328	
Balance on hand January 1, 1857 Tolls received from January 1, 1857, to November 23,	1,063	19
1857	102,835	68
Cash received for stone and old wheelbarrows sold	2,498	
	106,396	95
Cash paid for expenses, repairs, and improvements	52,873	
Balance on hand November 23, 1857	53,523	95
`		

The balance of cash on hand will probably be sufficient to carry to completion the unfinished repairs and improvements, and purchase the ground yet required for the branch canal.

The completion of the above named improvements has furnished greatly increased facilities for the passage of boats through the canal; whereas before the depth of the sedimentary deposit, and the encroachments of the sharp and irregularly projecting ledges of stone on the sides of the canal made the passage of boats slow and tedious, often crippling their progress by breaking their wheels, now the in-

creased depth and width of the canal enables them to pass safely and speedily. Before, when boats approached the stone arched bridge, they were compelled to stop and lower their chimneys, involving considerable delay and expense; now, by the use of the pivot bridge, they pass without a moment's detention. The use of the large basins is found to be very convenient and advantageous. Formerly, when a boat was in the canal, all others ready to pass in the other direction were necessarily detained until she was out, and very frequently several would be thus detained at the same time, not merely for an hour or two, but often as long as twenty-four hours; now several boats, going both ways, may be passing at the same time, as the basins furnish convenient passing places. In short, the increased facilities furnished by the several improvements named render the passage of boats so easy and expeditious that the detention of a boat very rarely happens; and it affords me pleasure to state that the work done receives the universal approbation of those having occasion to use the canal.

I have the honor to be, with much respect, your obedient servant, JAMES MARSHALL, President.

Hon. Howell Cobb, Secretary of the Treasury, Washington.

REPAYMENTS.

Amount of counter requisitions by transfers	\$1,822,728 29
treasury	115,077 27
	1,937,805 56
The aggregate amount of accounts settled during and comprised in 3,205 reports, was \$15,941,715 63,	the fiscal year, as follows:
Accounts settled out of advances made and charged to disbursing officers and agents	\$14,606,563 16
Accounts settled appertaining to military contributions, act March 3, 1849	188,948 60
bonds, under act of Congress	852,103 42
including special acts of Congress for relief of indi- viduals	294,100 45
	15,941,715 63

A more detailed report of the operations of this office will be found in the following statements, showing the character and amount of business transacted in each of its subdivisions, as also the condition of the business at the close of the first quarter of the present fiscal year.

QUARTERMASTER'S DIVISION.

In this division there were received during the fiscal year 809 quarterly accounts of officers doing duty in the quartermaster's department of the army, the aggregate disbursements involved therein amounting to \$5,487,907 84.

During the same period there were audited 782 accounts, involving the sum of \$5,288,921 55; leaving, at the end of the fiscal year, 71 accounts unsettled, as follows:

decounts ambertion, no retreme.	
Remaining unsettled on the 30th June, 1856	44
Received in the year ending 30th June, 1857	809
	853
Settled in the year ending 30th June, 1857	782
On hand unsettled	71

During the first quarter of the present fiscal year, ending September 30, there were received 184 accounts; settled during the same period 155; leaving unsettled at the end of the quarter 100; all of

which (excepting 27, which are suspended for explanations) will probably be disposed of during the present month.

The number of letters written in this division during the fiscal

year was 1,903.

SUBSISTENCE DIVISION.

In this division there were audited during the last fiscal year 840 accounts of officers doing duty in the commissary's department of the army, involving an expenditure of \$2,191,625 73.

The number of accounts audited during the quarter ending Septem-

ber 30 was 289, involving an expenditure of \$422,680 94.

There remained on file, unadjusted, on September 30, 1857, six accounts, involving the sum of \$13,316 26.

Number of letters written during the fiscal year in this division is

838.

PENSION DIVISION.

In this division are examined and settled the accounts of army pension agents; also claims for arrearages of pensions, and for pensions due and unclaimed at the pension agency for a period exceeding fourteen months, and, therefore, by law made payable at the treasury.

During the fiscal year there were received 188 quarterly accounts of pension agents, which, added to 35 on hand at the close of the last fiscal year, made an aggregate for settlement of 223. The number settled during the year was 212, involving the sum of \$1,554,399 87.

Of pension claims received there were 556, of which 403 were settled, involving the sum of \$23,038 62. The residue were suspended

for additional evidence or disallowed.

During the quarter ending 30th September, there were received 53 quarterly accounts, there being also 11 on hand at the commencement of the quarter. There were adjusted and settled during the same period 58, involving the sum of \$377,695 15, leaving six on hand.

Of pension claims received during the same quarter there were 123, of which 100 were settled, involving the sum of \$7,796 56, and the

residue suspended or disallowed.

The number of letters written in this division during the fiscal year, was 1,750; of calls for information from departments and offices there were received and answered 245.

ENGINEER DIVISION.

To this division are assigned the accounts of all officers and agents disbursing under the orders of the engineer and topographical engineer bureaus of the War Department, and the accounts of such officers and agents disbursing under the special direction of the War Department as are transmitted to this office for settlement.

Accounts of officers and agents of the Engineer Bureau.

These embrace expenditures for the purchase of sites for, and for the construction and repair of fortifications; for the surveys and improve-

290

ments of harbors on the Atlantic, and of rivers emptying into it, and all works of harbor and river improvement on the Gulf of Mexico; for continuing the Washington Aqueduct, and for the support of the Military Academy.

Accounts of officers and agents of the Topographical Engineer Bureau.

These embrace expenditures for military and geographical surveys; for surveys of the northern and northwestern lakes; for surveys in reference to the military defence of the frontier, inland and Atlantic; for surveys of routes for a railroad from the Mississippi river to the Pacific ocean; for the construction of military roads; for all works of harbor and river improvement on the lakes; and for improvement of the navigation of the Mississippi river, and of rivers emptying into it.

Accounts of officers and agents under the special direction of the War Department.

In these are embraced expenditures for surveys of routes for a rail-road from the Mississippi river to the Pacific ocean; for the construction of certain military roads; for the extension of the United States Capitol and the General Post Office building; for continuing the work of the new dome of the Capitol; for surveying and marking the southern boundary line of Kansas Territory; and for continuing the experiment of sinking artesian wells upon the public grounds.

Number of letters written during the year in this division was...

MISCELLANEOUS DIVISION.

During the fiscal year 352 claims and accounts under general laws and special acts of Congress were received and registered, involving an aggregate amount of \$1,699,487 63; of these, and others previously on file, 429 were investigated and acted on, involving the sum of \$1,226,080 12. The amount allowed was \$1,187,005 18; the residue of \$73,074 94 was suspended or disallowed for want of sufficient evidence or the authority of law.

Up to the 30th of September 31 additional claims were received, amounting to \$11,460 18; and 93 claims and accounts were investigated and reported on during the same period, amounting to \$302,552 77, of which \$285,199 88 was reported for allowance, and \$47,352 89 dis-

allowed or suspended for the same reasons as above.

Of these claims I will remark, there are no unusual features except in three cases, viz: the California war bond debt, the claim of the State of Maryland for interest on advances to the United States during the war of 1812, and the claim of the Edisto island company of South Carolina militia for personal services, and for the erection of two fortifications for the said island of Edisto during the same war. They were very heavy claims, and the allowances upon them were made under special acts of Congress.

In addition to the above many other reports relative to claims, some of them involving laborious investigations, were made to the Secretaries of the Treasury and War Departments, and upon calls of

Congress and the Court of Claims.

Some old claims for supplies and services in the Seminole Indian war of 1836 to 1841 remain on hand in the same condition as at the date of the last report. Action has been had in a few cases, but none have been allowed, nor is it believed that any further allowance can be made on any of them without additional legislation. More particular reference was made to this class of cases in a former report.

The number of claims for horses and other property lost or destroyed in the military service of the United States, under the act of March 3, 1849, still remains large. Such as have been called up by the parties, or their attorneys, have been promptly acted on; but the majority have been suspended for additional proof or disallowed. In this way 120 of these claims have been disposed of during the fiscal year, and up to 30th September, 176. The amount allowed during the year was \$1,936 30.

During the fiscal year there were 740 letters written in this division, and record books filled to the extent of 928 pages.

SOLDIERS' CLAIMS AND BOUNTY LAND DIVISION.

During the past fiscal year 1,173 communications relating to pay, pension and bounty land claims were duly investigated and disposed of, including claims of widows and orphans under acts of March 16, 1802, April 16, 1816, and the first section of the act of March 3, 1853, (McRae's volunteers,) which are executed in this office. Of the entire number of claims presented 29 were allowed. The amount of

money involved in the payment of the claims allowed was \$2,084 61. 50,141 bounty land claims, with 257 invalid and half pay pension cases, were examined and certified to the Commissioner of Pensions Since the first July and up to the 30th September 4,148 bounty land claims, with 34 invalid and half pay pension cases, have been examined and certified to the Commissioner of Pensions. 260 communications relative to pay, pension and bounty land claims have also been received and registered, all of which have been disposed of. number of letters written during the year in this division was 1,931. 664 bounty land claims yet remaining to be examined and certified to the Commissioner of Pensions.

COLLECTION DIVISION.

To this division are assigned the correspondence and other proceedings pertaining to the accounts of officers and agents who have been at any time disbursing for the government and have ceased to disburse, or gone out of office, having balances standing against them on the books of this office. A docket is kept embracing the names of all such officers or agents, and the amounts claimed from each, to which are added, from time to time, the names of others as they go out of service or cease to disburse, having balances charged against them.

At the date of the last report the outstanding balances were as follows: 1

On account of "arrearages" charged prior to 1820... \$2,808,800 17 Charged on current books since 1820..... 3,011,272 97

5,820,073 14

Of this amount there was then in suit and in course of prosecution, under the direction of the Solicitor of the Treasury, the sum of \$2,110,365 04 on account of "arrearages," and of the amount charged on the current books, the sum of \$1,764,559 72, leaving a balance for collection, by suit or otherwise, of \$1,945,148 38.

The operations of this division from the 30th September, 1856, till

the 30th September, 1857, may be thus briefly stated:

Total balance September 30, 1856..... \$5,820,073 14 Amount charged to officers during the year as having ceased to disburse, and who have accounts and vouchers in process of adjustment...

39,979 00 \$5,860,052 14

From which deduct amount closed by settlements and payments into the treasury during the year.....

327,443 31

Total balance September 30, 1857..... Of which in suit and in course of prosecution under the direction of the Solicitor of the Treasury on account of arrearages.....

5,532,608 83

2,110,365 04

Of amount charged on current books \$1,479,465 61	\$3,589,830 65
BalanceOf which accrued prior to 1820	1,942,778 18 698,434 13
Leaving a balance since 1820 outstanding 30th September, 1857	1,244,344 05

The number of letters written and recorded was 941. Quarterly reports have also been made, exhibiting at the end of each quarter the names of the debtors, office, or capacity in which disbursing, their residences, as far as known, the date to which their accounts were last settled, and the amount due.

It is obvious that, from the long lapse of time since many of those balances accrued, the death and insolvency of many of the persons charged, and the difficulty of ascertaining places of residence of others who may be living, and the fact that a portion of the amounts are generally matters of controversy between the government and the individual charged, the work of settling or collecting them must be protracted. Indeed, it would seem that a considerable portion of the charges styled "arrearages," all of which accrued prior to 1820, can never be satisfactorily closed, unless it be by legislative authority. It is gratifying, however, to find that the process of accumulation, which had been constantly going on, has at last been checked, and, instead thereof, a gradual reduction has been made.

On the 30th June, 1854, the total outstanding balance was \$6,193,613 11, of which there was in suit and in course of prosecution, under the direction of the Solicitor of the Treasury, \$3,448,664 23. Since then, up till the 30th September, 1857, there have been added to the docket the names of officers and others, exhibiting balances at their debit to the amount of \$627,518 42, making a grand total of \$6,821,131 53. In the same time the reductions have amounted to the sum of \$1,288,522 70, leaving, as above stated, a total balance still outstanding of \$5,532,608 83. During the last year the amount added to the docket amounted to only \$39,979, while the reduction by settlements and payments amounted to \$327,443 31.

Upon examination of the foregoing details, I trust you will agree with me in the opinion that the business of this office is in a satisfactory condition. Old arrearages, which had been accumulating for years, have been brought up, so that, at the date of the last annual statement to the Secretary of War of the number of unsettled accounts presented to this office in the last three years, up to and including the 30th September, 1857, which will not be included in the annual report of this office to the Comptroller of the Treasury, it appears that, with very few exceptions, all the accounts remaining unsettled are for disbursements made during the present year. The whole number of unsettled accounts then remaining on hand was 98, of which only four were for quarters antecedent to the second quarter of the year; and since then 50 have been settled, leaving only 48 ac-

counts of the whole number presented in the three last years ending

30th September, 1857.

The number of disbursing officers and agents, whose accounts are by law assigned to this office for settlement, and required to be rendered quarter yearly, is 510, thus producing 2,040 accounts during the year for settlement. In addition to those by the act of 3d March last, it was provided that all the accounts of disbursing officers in the quartermaster's department for clothing, and camp and garrison equipage for the army, which had previously been settled in the Second Auditor's office, involving an annual expenditure of nearly a million of dollars, should thereafter be settled in this office. Notwithstanding the gradual and constant increase in the business of the office, consequent on the growth and expansion of the country, the active and more extended operations of the military service, as well as the large appropriations for works of a civil and a military character, the expenditures on account of which are assigned to this office for settlement, I feel entirely confident that the present force of the office will be capable of meeting all the demands of the public service without any material delay.

In this connexion, however, I beg leave to invite your attention to a fact which has been the subject of correspondence with the late Secretary of the Treasury, as well as yourself, viz: the singular position this office occupies with regard to its clerical force. There are now, and have been for two years past, legally attached to this office ninety clerks, whose salaries are regularly estimated and appropriated for, and yet the actual force therein is but sixty-five clerks. This state of things has existed to a less extent, however, for several years past. In 1854, the number of clerks employed was 78; but by transfers to other offices the number has been gradually reduced until it has reached the number above stated. Thus, it appears, this office is charged with the sum of \$132,440 for compensation of its clerical force, when, in reality, \$33,800 of the appropriation is for compensation of twenty-five clerks performing service in other branches of the department. The clerks detailed from this office are disposed of as follows:

IUIIUWS.					
	•			Clerks.	Salary.
In the office of t	the Secretary of the Trea	sury	- ∀2	4	\$5,600
	First Comptroller	` -	-	$^{-}$ 2	2,600
	Second Comptroller	-	~	1	1,200
	Solicitor -	-		1	1,400
	First Auditor -	7	-	$oldsymbol{4}$	5,600
•	Second Auditor	-	:	2	2,600
•	Fourth Auditor		•	3	4,200
ý.	Sixth Auditor -	-	· 🕳	4	5,200
	Register -	.=	-	3	4,200
	Treasurer -	-	-	1	1,200
				ຄະ	22 200

Although some of these transfers, at the time when made, were understood to be only temporary, and the return of the clerks so

transferred was contemplated, yet, upon careful consideration of the circumstances, and having full confidence in the capacity of the present force to keep up with the current business, I have on several occasions signified to the head of the department that their services could be dispensed with so far as this office was concerned; and, therefore, I would now respectfully recommend that some arrangement may be made, if practicable, whereby the clerks referred to may be legally attached to the several offices in which they are employed, so that they may hereafter be omitted from the estimates of this office, and it relieved from the large extra charge from which it derives no benefit.

Very respectfully, your obedient servant,

ROBERT J. ATKINSON, Auditor.

Hon. Howell Cobb, Secretary of the Treasury.

D.

Treasury Department, Fourth Auditor's Office, October 28, 1857.

SIR: I have the honor to submit to you a report of the operations of this office during the fiscal year which terminated on the 30th of June last.

The number of accounts audited within that period was fifteen hundred and seven. Of these, two hundred and sixty-four were accounts of disbursing officers, embracing fifty-eight thousand nine hundred and twenty-seven individual accounts, for different periods of time, of persons connected with the naval service, each of which underwent the same critical examination that it would have done if it had been separately presented at the office. The accounts thus audited involved, in the aggregate, disbursements to the amount of \$15,411,884.

The letters received and registered, with a brief abstract of each, was five thousand and four; those written and recorded were five thousand seven hundred and seventy. Four thousand and twenty certificates were furnished to the Commissioner of Pensions of the respective service of persons claiming bounty land under the act of Congress of March 3, 1855. The examinations required for the purpose of obtaining this information necessarily consumed a great deal of time, extending, as they did, over an immense number of rolls, containing from a hundred to a thousand names each, and nearly all of them without an index. The requisitions registered during the year were twelve hundred and fifty-four. The allotments registered during the same period were twelve hundred and thirteen.

Various reports were made to the Secretary of the Navy respecting the hospital fund, the contingent expenses of the department, and other business of the office, among which was a statement, required by a resolution of the House of Representatives to be transmitted by

the Secretary to that body every year, showing the annual pay of each person whose name is contained in the Navy Register; "the amount paid him for rations, servants, and forage, and the gross amount paid or allowed him in all respects, for and on his account, for and during the preceding fiscal year." This compilation in respect to persons so numerous, receiving their pay and other allowances from so many disbursing agents, in different parts of the world, and under such varying circumstances, is, as may be supposed, a work of much time and labor, requiring months for its preparation.

The books of the office were carefully and faithfully kept during the

year.

Many other official matters received the attention and occupied the time of the several clerks, such as the apportionment of prize money, the preparation of cases for suit, searches for information for numerous applicants, &c., which cannot all be particularized in this report.

The present condition of the office is good, with the single exception that the space it is permitted to occupy is too confined for the convenient accommodation of all the clerks, or to admit of so methodical an arrangement of the papers for facility of access as could be desired. I think it is better to submit to this deficiency of room, however, than to have any of the desks transferred to another building. The force employed is sufficient for the prompt and efficient transaction of the business, without being unnecessarily large. The clerks are attentive and industrious, and no branch of the business is in arrear.

I have the honor to be, sir, very respectfully, your obedient servant, A. O. DAYTON.

Hon. Howell Cobb, Secretary of the Treasury.

E.

TREASURY DEPARTMENT, Fifth Auditor's Office, November 5, 1857.

Sin: In compliance with the request contained in your letter of the 23d ultimo, I have the honor to state, that of the various descriptions of accounts belonging to this office, there have been reported on and transmitted to the Comptroller, during the fiscal year ending June 30, 1857, one thousand two hundred and seventy-five, and that during the said period letters in relation to the business of the office were written and despatched to their destinations to the number of one thousand two hundred and eighty-two.

Under the act of Congress of March 1, 1855, "for remodeling the diplomatic and consular systems," most of the accounts of our consuls, commercial agents, &c., in foreign ports, have been finally adjusted. The very few that remain unadjusted, of this description of accounts, are in consequence of the imperfect manner they were prepared; these

imperfections have been pointed out to the parties, who will, no doubt, in due time correct the same.

The accounts of our consular officers, under the act of Congress approved August 18, 1856, "for regulating the diplomatic and consular systems," which act went into operation on the first day of January last, are transmitted quarterly, and, where it was possible to do so, have been promptly adjusted. The directions contained in the 18th section of the act, and in the 236th and 237th sections of the printed regulations, relative to the preparation of their accounts, appear to have been misapprehended by some of the consular officers, and their accounts, consequently, were erroneously made up and transmitted. These have all been examined, and the errors and omissions duly pointed out to them.

It was scarcely to be expected, in putting into operation the provisions of an act affecting all our diplomatic and consular officers abroad, which in many instances altered their salaries, and required new modes of preparing their accounts, that some mistakes would not have been committed in regard to their duty in the premises. It is due to these officers to state, that, considering the changes which have been made, and the additional duty imposed upon them, their accounts have generally been rendered with great care, and with an evident desire to comply with the instructions of the President.

The further operations of the office under the act have been to prepare, under the special directions of the Secretary of State, the books and forms necessary to the organization and perfection of the system prescribed by the President, in accordance with the provisions of the said act. Under this system the duties of the office have been increased, requiring the careful attention of the clerks in carrying out its detail, which may be stated, in part, as follows, viz:

First. Registering all fees collected, accounted for, and reported by

consular officers.

Second. Registering all consular receipts and statements of certified invoices forwarded by the collectors of customs to the Secretary of the Treasury.

Third. Registering and arranging the statements of the rates at which depreciated currency of the country in which the consular officer resides is computed in United States or Spanish dollars, or in silver or gold coins of other countries.

Fourth. Registering and arranging the monthly reports of the rates of exchange prevailing between the ports or places at which the consular officer is located and London, Paris, Amsterdam, Hamburg, and New York.

Fifth. Preparing statistics of the commercial information in reference not only to the trade of the place of the residence of the consular officer, but that of the neighboring country or towns with which it may be connected commercially, or through which the merchandise may be shipped to the United States.

Sixth. Preparing statistics of the prices current of the staple articles of foreign production exported from the country of their residence

to the United States.

The detail of this system, it is expected, will be perfected and

matured on or before the termination of the quarter ending March 31, 1858; and the results, under the respective heads mentioned, will then be furnished when called for by the Secretary of the Treasury.

It is gratifying for me to state that the regulations issued by the President, when carefully observed by the consular officer, have greatly facilitated the accounting clerks in the prompt settlement of their.

accounts.

During the year the current work of the office has been kept up, and the duties of each clerk performed in a prompt and commendable manner.

I have the honor to be, very respectfully, your obedient servant, MURRAY McCONNEL,

Auditor.

Hon. Howell Cobb, Secretary of the Treasurer.

F.

Office of the Auditor of the Treasury for the Post Office Department, November 14, 1857.

2700000000 II, 100;

Sin: In compliance with your request of the 23d ultimo, I have the honor to submit the following report of the operations of this office for the fiscal year ending June 30, 1857.

In order that the business despatched by the office may be properly presented, I will cite such provisions of the organic law approved July 2, 1836, as indicate its chief duties, responsibilities, and powers:

Section 8 provides for the appointment of "an Auditor, whose duty it shall be to receive all accounts arising in the Post Office Department, or relative thereto; to audit and settle the same, and certify their balances to the Postmaster General: provided, that if either the Postmaster General or any person whose account shall be settled be dissatisfied therewith, he may, within twelve months, appeal to the First Comptroller of the Treasury, whose decision shall be final and conclusive."

"He shall keep and preserve all accounts, with the vouchers, after

settlement."

A variety of other duties are enumerated in this and succeeding

sections not necessary to be cited here.

Section 14 enacts "that the Auditor shall superintend the collection of all debts due to the department, and all penalties and forfeitures imposed on postmasters for failing to make returns or pay over the proceeds of their offices. He shall direct suits and legal proceedings, and take all such measures as may be authorized by law to enforce the prompt payment of moneys due to the department."

Section 18 provides that, in cases in which proceedings at law for

the recovery of balances due on account of the Post Office Department shall be fruitless, the Auditor "may direct the institution of suits in chancery, to set aside fraudulent conveyances or trusts, or attach debts due to the defendants, or obtain any other proper exercise of the

powers of equity to obtain satisfaction of judgments."

It will be seen by the foregoing provisions that there is assigned to this office, except in cases of appeal, the various duties which, in regard to the other departments of the government, are shared by an Auditor, Comptroller, Register, and Solicitor, requiring a correspondent degree of capacity, energy, and accuracy in the employés of the office to enable them to so discharge their responsible duties as to secure the approval of the Postmaster General and of the immense number of postmasters, contractors, and other persons, whose accounts are adjusted by them.

Only one appeal was taken to the First Comptroller of the Treasury during the year, and in that case the decision of this office was

sustained.

The Auditor's office was organized July 2, 1836, with a clerical force of forty-three persons, and the number of post offices then in operation was 11,091.

The number of changes of postmasters made during the year ending June 30, 1836, requiring a final adjustment of accounts,

was 1,844.

The gross revenue of the department for collection, derived from the high rates of postage, viz: "for every letter composed of a single sheet of paper, conveyed not exceeding thirty miles, six cents; over thirty and not exceeding eighty miles, ten cents; over eighty and not exceeding 150 miles, twelve and a half cents; over 150 and not exceeding 400 miles, eighteen and three-quarter cents; over 400 miles, twenty-five cents," was \$3,398,455 19.

The number of post offices in operation June 30, 1857, was 26,586; and the number of changes made during the year requiring final

adjustment of accounts was 7,868.

The gross revenue from postages at the low rate of three cents for every single letter conveyed in the mail not exceeding 3,000 miles, and for any distance exceeding 3,000 miles, ten cents; and on news-

papers, at a corresponding low rate, was \$7,353,951 76.

But the number of post offices in operation, and the amount of revenue, give but a faint idea of the amount of labor required in the adjustment of the accounts and collection of the revenues of the department. It is only when we consider the vast scope of its operations, its great net-work of post roads, over which the annual transportation of the mails for the year ending June 30, 1856, as stated in the report of the late Postmaster General, was 71,307,897 miles, embracing every city, town, village, and hamlet in the wide-spread Union; its myriads of postmasters and their deputies, who receive the revenues in the smallest coins of our national currency; its hosts of contractors and others employed in carrying the mails; and that the accounts of all these parties have to be audited quarterly, that we arrive at a just estimate of the labor performed by the one hundred and sixteen clerks now employed in this office.

This force is arranged in six divisions, styled "examiners," "registers," "book-keepers," "pay clerks," "collecting clerks," and "miscellaneous."

As the nature of the duties assigned to these divisions is fully set forth in the last annual report of this office, I shall give only a brief summary of the chief labor performed by them during the last fiscal year.

EXAMINERS' DIVISION.

Six clerks, in charge of the "postage stamp and stamped envelope ledgers," have received from the Post Office Department 101,746 quarterly returns of postmasters, and after making a comparison of the postage stamp account as rendered by the postmaster with the account on their books, compiled from the books of the Third Assistant Postmaster General, and noting on them all items of difference, have passed them to the thirty-five examiners, who, after examining and auditing them, have passed them to the "registers' division."

The chief examiner has examined and audited quarterly the commission and emolument accounts of 174 postmasters at offices where the commissions and emoluments have exceeded \$500 per quarter.

In over 18,000 of the quarterly accounts errors have been discovered by this division, whereby the indebtedness of postmasters was increased in each account more than fifty cents; and three clerks, styled "error clerks," have furnished to the postmasters by whom the errors were committed accurate copies of their accounts as rendered and corrected.

All postal accounts arising out of postal conventions between the United States and foreign governments are now adjusted by two clerks of this division, one of whom also disburses the "salary and contingent funds" of the office.

REGISTERS' DIVISION.

There are twelve clerks in this division, who have carefully analyzed and entered in their registers the 101,746 accounts, in accordance with the provisions contained in the 12th section of an act approved July 2, 1836, and have delivered these registers to the book-keepers within twenty days after the expiration of each quarter.

BOOK-KEEPERS' DIVISION.

There are thirteen clerks employed in this division, the principal book-keeper having charge of the general accounts of the Post Office Department; three clerks keep the accounts of mail contractors, and nine clerks have charge of postmasters' and late postmasters' accounts. The average number of current accounts in charge of each clerk is

The average number of current accounts in charge of each clerk is 3,620, and the number of current ledgers is 41, each containing about 650 pages of imperial paper.

All items of debit and credit have been carefully posted into these

edgers and examined within the period fixed by regulation.

PAY DIVISION.

This division embraces twelve clerks, each having charge of about 476 accounts of mail contractors, whose accounts have been audited and paid quarterly by "collection orders" and drafts issued on postmasters, and warrants on the treasurer and assistant treasurers of the United States.

The number of "collection orders" issued to contractors was 72,110; upon which they received of postmasters \$1,083,869 29 nearly two months prior to the time fixed by contract for auditing their mail pay.

The periods fixed by contract for quarterly adjustment of mail service are within the months of May, August, November, and February

COLLECTING DIVISION.

There are seventeen clerks employed in this division, which is sub-

divided as follows, viz:

One principal corresponding clerk and three assistants; nine "stating clerks" in charge of present and late postmasters' accounts; two "copying clerks" who prepare copies of all accounts required by present and late postmasters; one "draft clerk" who issues all "collection drafts," and prepares an alphabetical, chronological, and numerical record of the names of all postmasters whose term of office expires in each fiscal year; and one clerk who enters in this record all proceedings of this office in connexion with the final adjustment of the accounts of late postmasters.

 By late postmasters in California and Oregon who have presented vouchers of expenditures in and about the business of their offices for a much larger sum than is charged against them on the books of this office; and as it is probable that an amount will be allowed to them by the Postmaster General, under the provisions of the 4th and 5th sections of an act approved July 27, 1854, which will equal their apparent indebtedness, this sum should be deducted, thereby leaving due by late postmasters in the Atlantic States the sum of.....

19,333 15

For the collection of which this division is using all its energies.

Three thousand nine hundred and ninety-four "collection drafts" have been issued; 26,586 postmasters' general accounts have been stated from the ledgers.

The correspondence of the division covers 2,248 folio post pages;

in addition to which 10,120 circular letters have been issued.

Eighty-nine suits were instituted during the year; 42 judgments obtained thereon; \$3,856 95 collected, and 27 accounts closed.

In 31 suits commenced prior to July 1, 1856, there has been col-

lected the sum of $$9,220 ext{ } 47.$

The accounts of the United States attorneys and marshals, and clerks of the United States courts, in 82 cases, have been adjusted and paid.

MISCELLANEOUS DIVISION.

Four clerks in this division have adjusted, quarterly, the accounts of 3,133 "special mail contractors" and of 1,596 "mail messengers and local agents," making 18,916 adjustments during the year; and have conducted the large correspondence growing out of the peculiar character of "special post offices."

One clerk adjusted and paid, monthly, 406 route agents, and furnished all statements of present and late mail contractors' accounts

that have been required.

Two clerks had charge of the "warrant, draft, and cash books" of the office, and have entered therein 7,695 "warrants," amounting to \$5,450,367 52, and 13,993 drafts issued by the Postmaster General,

amounting to \$1,030,107 83.

One clerk has recorded 365 folio post pages in the letter books, embracing letters concerning cases in suit, and registered, enveloped, and mailed 10,120 printed letters. He has, also, adjusted and reported for payment all accounts of special agents, and for "blanks" and advertising for the Post Office Department.

One clerk has charge of the "collection and miscellaneous" letter

books, and has recorded therein 2,606 folio post pages.

One clerk revises the accounts of late postmasters who have apparent balances due them, and reports the sum found due to the Postmaster General for payment. During the year he has paid 957

accounts, amounting to \$36,072 02.

The material required of this office for the "Biennial Register," viz: the names of post offices, and their net annual proceeds; the names of all postmasters, and their annual compensation; the names of clerks employed in post offices by authority of the Post Office Department, and their compensation; the names of all mail contractors, special mail contractors, mail messengers, route agents, and special agents, and their compensation; and the names of all persons to whom payments have been made for printing done for the Post Office Department, with the sum paid to each—covering 518 pages of the 708 contained in the last "Biennial Register," and of course a much larger number in the one now being published—is nearly completed, notwithstanding the fact that this great labor has been performed, in addition to the regular current duties of the office, without an increase of its clerical force.

The number of letters received during the year was 126,454, and

the number prepared and mailed by the office was 71,791.

My connexion with the office has been too limited to enable me to speak from personal observation of the manner in which the gentlemen employed therein have discharged their various and responsible duties, but I am assured by the chief clerk and by the records of the office that they have labored with such energy, capacity, and fidelity, as justly entitles them to your favorable consideration.

Respectfully submitted.

THOS. M. TATE, Auditor.

Hon. Howell Cobb, Secretary of the Treasury.

G.

TREASURY DEPARTMENT, Comptroller's Office, October 26, 1857.

Sir: In reply to your letter of the 23d instant, and for the purpose of exhibiting the operations of this office during the fiscal year last past, I respectfully report that the following accounts have been revised and certified to the Register, viz:

6,904 accounts reported on by the First Auditor.

1,286 accounts reported on by the Fifth Auditor.
2,013 accounts reported on by the Commissioner of the General Land
Office.

That the following named warrants have been countersigned, entered in blotters, and posted, viz:

459 stock warrants.

308 Texas debt warrants.

1,748 quarterly salary warrants.

1,859 treasury (proper) warrants. 2,365 treasury interior warrants.

4,345 customs warrants.

44 appropriation warrants.

1,001 navy pay warrants. 274 navy repay warrants.

1,142 miscellaneous covering warrants.

634 land covering warrants.

1,111 customs covering warrants.

9 treasury funding warrants.

3,178 army pay warrants.

852 army repay warrants.

1,399 army interior pay warrants. 229 army interior repay warrants.

The whole making an aggregate of 20,957 warrants.

2,636 letters have been received, endorsed, registered, and filed.

4,270 letters have been written, registered, recorded, and forwarded, the records of which cover 2,812 pages folio post.

There have been 32 formal decisions made and recorded, their

records covering 285 pages folio post.

Twenty-seven reports have been made to the different departments, the records of which cover 266 pages folio post. Besides, other duties have been performed, which it is not deemed necessary to particularize, but which constitutes no small portion of the labors of the office.

Respectfully yours,

W. MEDILL, Comptroller.

Hon. Howell Cobb, Secretary of the Treasury.

H.

TREASURY DEPARTMENT, Second Comptroller's Office, November 5, 1857.

Sir: In compliance with your request of the 23d ultimo, I have the honor to submit the following report of the operations of this office for the fiscal year ending June 30, 1857.

The accounts examined, passed, and recorded on the books of this

office during the year were:

Reported by the Second Auditor	205

Total 5,036

being an increase of 166 settlements upon the number of the preceding fiscal year.

The Fourth Auditor's accounts, though comparatively small in number, embrace heavy expenditures, and severally require much

time for due examination.

In addition to the settlements above enumerated, there is a class of small accounts revised by this office and paid by disbursing officers of the army and navy on certificates originating in the Second and Fourth Auditors' offices.

These are also the subject of careful investigation, and were:

From Second Auditor's office	488
From Fourth Auditor's office	535

Showing a decrease of 330 certificate settlements from last year's operations.

The amount of expenditure embraced in the accounts reported by

the Second Auditor was \$11,043,441 84.

The Third Auditor's confirmed settlements involve an expenditure of \$15,941,715 63.

The disbursements in the settlements of the Fourth Auditor were

\$15,411,884.

Thus showing the revision here of some forty-two millions of public

expenditure within the last fiscal year.

The requisitions upon the treasury for advances to disbursing officers, payments, transfers in settlements, &c., found to have been received, examined, countersigned, and entered on the books of this office, were:

For Department of Interior.

Pay or advance requisitions	1,391
Transfer refunding requisitions	

For Department of War.

Pay or advance requisitions	3,095
Transfer or refunding requisitions	867

For Navy Department.

Pay or advance requisitions	912
Transfer or refunding requisitions	266
	_00

	· ·		
an ı			0 -0-
TOTOL			6.766
T O DOM:			U. 4 Will
		· · · · · · · · · · · · · · · · · · ·	
	;		

Exhibiting an increase within the year of 538 requisitions.

The letters received, filed, and answered were seven hundred and

The answers cover 410 folio post pages of the letter book.

The number of accounts reported for suit was twelve.

The annual statements required by the act of May 1, 1820, were duly transmitted, in duplicate, to the Secretaries of the Interior, War, and Navy, by whom they were reported to Congress, and may be seen as forming Executive documents of the last session of the Senate

and House of Representatives.

These statements showed the balances of appropriations standing upon the books of their respective departments on the 1st July, 1856; the appropriations made for the fiscal year 1855-'56; the repayments and transfers in same time; the amounts applicable to the service of the year 1855-'56; the amount drawn by requisitions from the treasury for the same period; and, finally, the balances on the 30th June, 1856, with such appropriations as were carried to the surplus und.

In compliance with the regulations of the Executive for carrying into effect the provisions of the treaties of 20th October, 1832, and of 24th May, 1834, with the Chickasaw tribe of Indians, semi-annual statements of the receipts and disbursements growing out of the several trusts created by those treaties were furnished to the Secretary of the Interior.

For further details of the legally prescribed and customary duties of this office, I would respectfully refer to the late "Reports on the

Finances."

In conclusion, while I would solicit your attention to the number of accounts and claims examined and adjusted during the last fiscal year; to the large amount of expenditures involved in these settlements; and, particularly, to the fact that the clerks of this office should be required carefully to examine each voucher in every account here revised, not only to ascertain that the amount charged was actually expended, but that the expenditure was duly authorized by law and by the regulations of the service to which they appertain, as well as presented in the prescribed forms of the Treasury Department; that the payments were made to the rightful claimants; and, also, that the amount was charged to the proper appropriation, I have to repeat the concurrent testimony of my predecessors that the revising clerks of this office should be appointees of special aptitude and experience; and I would respectfully add that, with this end in view, promotions should, as far as practicable, be made from the offices of the Second, Third, and Fourth Auditors, where they may have evinced the requisite qualifications.

I have the honor to be, very respectfully, your obedient servant,
J. MADISON CUTTS.

Comptroller.

Hon. Howell Cobb, Secretary of the Treasury.

Ţ

TREASURY DEPARTMENT,
Office of Commissioner of Customs, November 20, 1857.

Sir: In presenting the usual report of the operations of this office during the year preceding, I am gratified at being able to state that the same promptitude and regularity in the rendition of their accounts, which I had occasion to notice last year, continues to be observed by the collectors of the customs and disbursing agents of the treasury whose accounts are revised and settled in this office. The collectors who have gone out of office during the year have, with few exceptions, fully settled their customs accounts and paid the balances due thereon into the treasury. Their accounts, as disbursing agents, superintendents of lights, agents of marine hospitals, and those involving their official emoluments, have also been closed as far as practicable, and all are in course of final adjustment.

In those still remaining open, so near an approximation to a final adjustment has been reached as to justify the belief that in no instance will there be any defalcation or loss to the government through their agency, either as collectors or disbursing agents of the treasury.

Many of these officers have a variety of accounts involving the receipt and disbursement of large sums of money, the expenditures for the erection of custom-houses and marine hospitals, the payment of debentures and other miscellaneous expenses being devolved upon the collectors of the customs acting as disbursing agents of the treasury. These accounts, as well as those relating to the collection of the revenue from customs, and the disbursement for expenses incident thereto, have recently been required to be rendered at the end of each month, six days being allowed after the expiration of the month to make up and forward them to the accounting officers of the treasury. By a regulation of the department these accounts are required to be settled during the month ensuing, so that both the department and the office engaged in the collection or disbursement of the revenue may know within the month precisely how the accounts of each officer Some complaint has been made that the frequency of should stand. these settlements occasions unnecessary labor, and where the disbursements are small creates an inconvenience from whic hno corresponding benefit is derived. To some extent this is undoubtedly true, and in districts where the expenditures are quite small, I am of opinion that a relaxation of the rule, so far as to allow a return to the system of quarterly accounts for disbursements only, might well be granted. But I am so fully convinced, from experience under both systems, that short and frequent settlements of the accounts from all the larger ports is attended with mutual benefit to the government and the collectors, and is so essential a safeguard to the public money, that I should deprecate any considerable change in the present system.

The system as now established works well, and if the accounts are properly scrutinized it would be extremely difficult for any defalca-

tion to occur without immediate detection.

The administration of the regulations now in force relating to marine hospitals, entitled "Regulations for the return and collection of the hospital fund, and the application thereof for the relief of sick and disabled seamen," being No. 68 of treasury regulations, has occasioned no little embarrassment to the agents and the accounting officers. These regulations were intended, and, in the main, are well adapted, to remedy many of the abuses to which the administration of that fund had before been subject, and have introduced some highly useful reforms; but there are some portions of the code which it is found impracticable to carry out, and others which are found to limit the authority of the agent in relieving sick and disabled seamen to an extent not contemplated by the act of Congress providing for the collection of the fund. Since the promulgation of these regulations, I have scrupulously adhered to their provisions in the settlement of the agents' accounts, and have consequently been frequently obliged to present individual applications for exemption from the restrictions therein contained for your consideration and allowance. much better to have a revision of the regulations, with such amendments as experience has shown to be proper, and which would supersede the necessity of frequent applications to the Secretary for a relaxation of particular provisions. It is believed that a revision might now be made, which, without impairing the efficiency of the regulations in preventing abuse and fraud, would materially facilitate a just and faithful administration of the fund.

In my report of last year I suggested that the increasing business of the office called for some additional clerical force, and recommended the allowance of one additional clerk. Since then some further duties have been devolved upon the office, and it will be observed by the synopsis of business herein submitted that the enlargement of regular business still goes on; the correspondence has now become so voluminous that the clerk in charge of the records is unable, by devoting his whole time to his desk, to keep them from falling into arrear. Knowing your desire to reduce rather than enlarge the public expenditures, I am unwilling, under present circumstances, to recommend a permanent increase of force; but as authority will exist after the commencement of Congress to employ temporary clerks, and as the contingent fund of the office has been sparingly used and a large surplus remains in the treasury, out of which such assistance could be paid,

would rather suggest relief in that way.

The number of accounts of collectors of the customs, and of surveyors designated as collectors, received and finally settled in this office during the year, amounts to two thousand seven hundred and fifty-seven.

Accounts relating to the superintendence and construction of light-houses, beacons, buoys, marine hospitals and custom-houses, and for other miscellaneous purposes, amount to three thousand and twenty-two.

The number of bonds taken from collectors, naval officers, &c., and the notices issued thereon, amounts to two hundred and forty-six.

In disposing of this amount of business, with other matters referred by the department, eight thousand and fifty-eight letters have been sent from the office, all of which have been entered at length upon the records.

In concluding this report, which is the last I shall have the honor to submit, I may be pardoned for observing, that when I came into the office, in 1853, I found a large number of accounts of collectors of the customs and disbursing officers, who had previously gone out of office, many years in arrears. In the autumn of that year a list of these old accounts, amounting to about five hundred in number, with balances upon them appearing to be due to the United States of three millions of dollars, were put into my hands by the late Secretary of the Treasury, with the request that I would undertake their investigation, and, if possible, have them closed upon the books of the treasury. This investigation led to a protracted and voluminous correspondence, which was steadily pursued during a period of nearly two years, the labor of which was mostly performed after the close of office hours. Many of the principals and their sureties had deceased, some had become insolvent, some had removed to other localities, and there were many of the accounts which required careful re-examination and restatement to ascertain the amount actually due upon them.

During the progress of this investigation, several reports, accompanied by detailed lists, were made to the Secretary of the Treasury, and in my final report in 1855 I had the satisfaction to represent the list as substantially closed. In most of the cases the balances found due to the government were recovered and paid into the treasury; some few were put in suit, and the small residuum so thoroughly ex-

plored as to be reported as wholly worthless.

It is with great satisfaction, therefore, that I shall leave the office unincumbered by the arrearages of former years, and in the conviction that, with the amendments to which I have herein referred, the system of accounting now existing is well calculated to prevent a like accumulation in the future.

Very respectfully, your obedient servant,

H. J. ANDERSON,

Commissioner of Customs.

Hon. Howell Cobb, Secretary of the Treasury. J.

Treasury of the United States, November 10, 1857.

Sir: In compliance with your instructions, I have the honor to submit the following summary of the business of this office during the fiscal year ending June 30, 1857.

which includes repayments of previous advances and amounts transferred from one appropriation to another in adjusting the balances of settled accounts.

73,932,870 18 which also includes payments for the transfer of balances in adjust-

ing settled accounts.

The sum of \$26,146,000 in coin and bullion has moved during the year for the purpose of being coined, or being used in making disbursements for the public service. This result has been effected by means of 1,634 transfer drafts, a large portion of which have been exchanged for coin, when such exchanges suited the convenience of the department, while the remainder were satisfied by the actual transportation of coin and bullion.

The arrangements introduced by your predecessor, and adopted by the act of March 3, 1857, under which moneys drawn from the treasury by warrants in favor of disbursing officers are held on deposit to the official credit of such disbursing officers, subject to these orders, by the Treasurer, the assistant treasurers, and some designated depositaries, have continued to work satisfactorily, and have been much

12 F

extended; involving, however, much increased responsibility and labor on all those who hold these delicate trusts.

In this office alone the receipts from all sources, on treasury account proper, during the year amounted to \$8,553,395 32.

Thirteen hundred and thirty-four drafts have been satisfied, either by payment in coin or by being entered to the credit of disbursing officers, and made subject to their checks. Accounts have been kept with sixty-eight disbursing officers, whose credits were drawn upon and paid to the amount of \$8,145,620 95, or 17,214 checks.

The sum of \$6,704,700 has been transferred during the year, from the assistant treasurer at New York to this office, by means of 3,803

checks given in exchange for coin previously paid here.

These latter operations, it is evident, have afforded favorable and very acceptable accommodation to our business community; while, at the same time, they have relieved the department of the onus of transporting that amount of specie which it would otherwise have been compelled to encounter.

I am happy to add that all branches of business in the office proper and in the special money department have been conducted with highly commendable promptness and accuracy, and, as I believe, to the entire satisfaction of all persons who have had any business transactions with the office.

I have the honor to be, very respectfully, your obedient servant, SAM. CASEY,

Treasurer United States

Hon. Howell Cobb, Secretary of the Treasury.

Office of the Solicitor of the Treasury, November 17, 1857.

Sir: In compliance with your instructions of the 23d ultimo, I have the honor to transmit herewith tabular statements which show the operations of this office during the fiscal year commencing July 1, 1856, and ending June 30, 1857. For the more clear comprehension of the business these tables arrange the suits brought in classes and are numbered 1, 2, 3, and 4.

No. 1 is a statement in detail of suits on treasury transcripts of accounts of public officers settled and adjusted by the accounting

officers of the department.

No. 2 is a statement of suits for the recovery of fines, penalties,

and forfeitures, for violations of the revenue laws.

No. 3 is a statement of miscellaneous suits, including all not em-

braced in the two preceding tables.

No. 4 is a general statement showing the aggregates of these tables, of which the following is a condensed summary:

Statement of the operations of the Solicitor's Office during the fiscal year commencing July 1, 1856, and ending June 30, 1857.

The tables show that 520 suits were brought during the year, of which 24 were on treasury transcripts, class 1, for the recovery of \$710,038 53; 212 for the recovery of fines, penalties, and forfeitures, class 2, for violations of the revenue laws, the mass of which are in rem., but includes specific fines and penalties, amounting to \$2,700 00; and 248 are of a miscellaneous character, class 3, for \$418,241 25—making a general aggregate of 520 suits to recover \$1,130,979 78, in addition to the cases in rem.

Of the above suits 301 have been tried and disposed of as follows: 112 decided in favor of the United States, 34 decided against the United States, and 155 settled and discontinued before trial, leaving 219 still pending undecided.

This is a summary of the business which originated during the fiscal year.

Of the old business pending on the dockets of the office which originated previous to the commencement of the fiscal year, it appears that 325 suits have been tried and disposed of during the year as follows, viz: 88 decided for the United States, 55 decided against the United States, and 182 settled and dismissed before trial, leaving 480 old cases still pending on the dockets.

The aggregate of suits of all classes tried and disposed of during the year is 626; the amount of judgments obtained, exclusive of cases in rem., is \$332,721 39; and the amount collected from all sources, \$748,532 07, viz:

 $\frac{349,504}{27}$ \$748,532 07

The whole number of suits now pending on the dockets is 699. All which is respectfully submitted.

Hon. Howell Cobb, Secretary of the Treasury.

F. B. STREETER, Solicitor.

L.

TREASURY DEPARTMENT, Register's Office, November 27, 1857.

Sin: In response to your letter of the 23d ultimo, requesting me to transmit to your office, at as early a day as practicable, the annual report of the operations of this office for the year ending 30th June

last, I have the honor to submit the following report:

During the past fiscal year the business of this office has been kept promptly up, notwithstanding a considerable increase over former years. Had it not been that the clerical force under my charge exercised the utmost diligence and industry this end could not have been obtained. All the business has been divided and systematized to the highest degree attainable; yet its natural increase is so great that, to insure its completion and to keep it regularly up, many of the clerks have been required to continue at their labors several hours in the day beyond the regular office hours. This requisition upon their time, I am happy to say, has always been responded to with cheerfulness and alacrity.

In the division having charge of the receipt and expenditure statistics, the business of the year shows an increase over the preceding as that did over all prior years. The comparison of a few items will

show the ratio of this increase, viz:

1844-'45. 1855-'56. 1856-'57.

Notwithstanding the warrants issued in the year ending 30th June, 1856, for the civil list and expenditures exceed by twenty-five per cent. that of the year 1854-'55, principally in consequence of upwards of two thousand having been issued in that year in payment of refunding duties on fish and to the creditors of Texas, yet the number issued during the late fiscal year was greater by 307. This comparison, however, of the number of warrants issued during the last two years, does not correctly indicate the principal increase of the business in this division.

The number of personal accounts on the several ledgers relating to the civil and other expenditures is now much greater than at any former period. This is caused in a great measure by the change in the mode of paying the consuls and American agents. The increase in the number of accounts of these officers of the government has been at least three-fold; and the duties of Mr. Rittenhouse, having supervision, and the head of this division, although too onerous heretofore, by this arrangement have been greatly augmented. The duties of his own desk is now at least double what they were some years since.

The statistics to be embodied in the volume entitled "Receipts and Expenditures," will be compiled and reported up, unless some unfor-

seen accident occurs, within the time prescribed by law. The statistics of commerce and navigation were reported up to your office on the 20th October last, since which time they passed into the hands of the public printer; the proof sheets have been sent here, corrected, returned again to the printer, and the volume is now completed,

indexed, and bound.

The instructions of the Secretary of the Treasury, embraced in his letter of the 30th June last, rendered it necessary to prepare and furnish to the collectors of customs entirely new forms for making their returns of exports and imports. This duty devolved upon the head of the division having charge of the commercial statistics—Colonel Bateman—and by much labor and exertion was accomplished in time to enable these officers to make their returns for the quarter ending September 30, 1857, in alphabetical order, as prescribed by the Secretary in the instructions referred to. In this division the same increase as in the division first above referred to has occurred, yet the business has never been more promptly discharged. This result has, however, only been brought about by an increased application and diligence corresponding to that in the first division on the part of the clerical force.

In the loan office branch the business has been kept promptly up, as in former years, and is so completely systematized that it is questionable whether any improvement could be suggested. I say this in

justice to Mr. John Oliphant, having charge of this division.

In the fourth and last division—that having charge of the tonnage statistics—the industry and promptitude of Mr. Francis Lowndes, the head, and of his force, is equal to that of any of the other divisions. During the past year the tonnage has been corrected in conformity with a circular issued to the several collectors, from this department, last year. This has given much additional labor to this branch, but will ensure, in the end, a correct exhibit of the tonnage statistics of the United States, an approximation to which, heretofore, has been found impossible.

Having thus briefly disposed of the business operations of the past fiscal year, allow me to offer some suggestions in regard to an increase of clerical salaries, and to point out some discrepancies between the labor and recompense of a portion of my clerical force, when compared

with that of some of the other departments.

In the General Land Office there are five clerks of class four, in the Pension Office five of the same class, in the Indian Bureau three, and in this but one! The clerks employed by Congress, and who seldom are employed in their duties half the year, receive a compensation, direct and incidental, ranging from \$1,450 to \$2,150 per annum. As to labor, ability, and compensation, let me adduce one comparison.

Mr. Rittenhouse, at the head of the division above alluded to, possesses clerical ability of the very highest order. In my humble judgment, without intending disparagement to other clerks, government has no one in her employ his superior, if his equal, in point of ability, experience, and a thorough knowledge of all the details of official business, nor his equal in point of application to duty, yet his annual compensation is but \$1,600. Admitting, however, that he is only

the equal of those of the fourth class in the other departments above referred to, his compensation at least should be equal to theirs; and this argument is surely not weakened by a comparison between the amount of *time* employed by congressional clerks, their compensation, and the time given and compensation received by Mr. Rittenhouse.

But this is not the only case of injustice. There are a number of other clerks in this office whose abilities and services rank with those of the fourth class in any of the other departments, yet whose salaries do not correspond with those; and so of the lower grades. These discrepancies and manifest injustice has been pointed out in my two

preceding reports to the Secretary of the Treasury.

I am aware that Congress alone has the power to render justice in the matter, and it is to be hoped that while they liberally pay those clerks who labor not more than half the year upon an average, they will not forget the daily drudges who labor and toil throughout the whole year, the only respite allowed many of them being those days guarantied by law and the Bible, namely, Christmas, the 4th of July, and the Sabbath.

If Congress were to change the present classification of the clerks in this office so as to allow three more of class four and four additional of class three, the discrepancies and injustice complained of would, in some degree, be removed.

I am, very respectfully, your obedient servant,

F. BIGGER,
Register of the Treasury.

TREASURY DEPARTMENT, Register's Office, November 23, 1857.

Sir: I have the honor to transmit herewith a statement showing the amount of moneys expended at each custom-house in the United States during the fiscal year ending June 30, 1857; also, a statement of the number of persons employed in each district of the United States for the collection of customs during the same period, with their occupation and compensation required by the act of March 3, 1849.

I have the honor to be, very respectfully, your obedient servant, F. BIGGER,

Register.

Hon. Howell Cobb, Secretary of the Treasury. Statement showing the amount of moneys expended at each custom-house in the United States during the fiscal year ending June 30, 1857.

F. BIGGER, Register.

TREASURY DEPARTMENT, Register's Office, November 23, 1857.

Office Supervising Inspector, Third District, Baltimore, November 16, 1857.

Sin: I have the honor to transmit herewith, as secretary of the Board of Supervising Inspectors, their fifth annual report for the year ending October 1, 1857. The minutes of the entire proceedings of the board are now in the hands of the printer, copies of which will be forwarded to the department as soon as prepared.

Very respectfully,

JOHN S. BROWN, Secretary of Board.

Hon. Howell Cobb, Secretary of Treasury.

No. 15.

Louisville, October 27, 1857.

Sin: The board of supervising inspectors, appointed in conformity with the act of Congress passed August 30, 1852, commonly known as the steamboat law, and now holding their annual session in this city, in compliance with the provisions of said act, would respectfully submit this their fifth annual report of the proceedings of the several boards of inspectors during the past year, terminating September 30, 1857. We would also respectfully call your attention to some features in the law which we are of opinion may be advantageously modified; also additions and alterations that experience in the execution of the law have shown to be desirable.

This law has now been in operation for five years, and whatever may have been the results of its operation, whether beneficial or otherwise, those results cannot now be with propriety considered fortuitous by those unfriendly to it, as was claimed by them during the early years of its operation. But these results, whatever they are, we think, may be fairly attributed to the operation of the law. With the view of accertaining from the facts of the case, so far as practicable, what have been these results, we present a comparison of the total loss of life upon the western rivers, from accidents and casualties which the law is designed to prevent, during the five years immediately prior to the law going into operation, with similar losses during the five years that the law has been in force. We are compelled to confine this comparison to the western rivers, as we have no statistics of the loss during that period on the northern and eastern waters.

Table of loss of life, for five years prior to the passage of the law on western rivers. This table has been made from "Lloyd's Steam boat Directory and Disasters on the Western Waters," and embraces

the five years immediately preceding the passage of the present steamboat law—that is, from 1848 to 1852, both years inclusive. This is the best and most reliable source from which this information can be procured. It is well known, however, that even this does not embrace all the disasters that occurred during that time. Indeed, there are comparatively few of the collisions and other disasters of like character given; and members of this board will remember several very disastrous explosions that took place that are not enumerated in that work:

In 1848	Explosions.	Lives lost.
	8 	
	13	
1851	5	152
1852	18	395
	-	1 155
There were also wounded by By other disasters, as enum	erated in Lloyd's work,	1,155
during the same period, t	here were lives lost	416
Making a total loss of life, a	s related by Lloyd, of	1.571

Making a total loss of life, as related by Lloyd, of... 1,571 persons in five years previous to the law going into operation.

Table of loss of life for five years subsequent to the passage of the law.

	•		Explosions.	Live	s lost.

٠					

By an examination of these statements, we find that for five years prior to the passage of the steamboat act we have accounts of the loss of 1,571 lives; and for the five years since the said passage, the total loss of life on the western rivers is 345, leaving a difference of 1,226 lives.

This, however, does not represent relatively the correct proportion, as it should be born in mind that there has been a very large increase of the steam marine of the western rivers, during the time for which the statement has been prepared. With these facts before us, we conceive that the beneficial effect of the law can no longer be a matter of doubt.

In regard to the necessity of the inspections and tests required by

the laws, the experience of every board of inspection will furnish instances during every year of defects of both material and workmanship, discovered and remedied, and of deficiencies ascertained and supplied, which otherwise must have resulted at some period in serious accident had not such inspections been made. Indeed, the necessity for the hydrostatic test of boilers to their safety is now so generally recognized, that it has become very common in some sections, when making contracts for the construction of boilers for other purposes than for passenger steamers, and which do not come within the scope of the law, to insert a clause requiring that such boilers shall be submitted to and guaranteed to stand the hydrostatic test; and we are firmly of the opinion that no one provision of the act of Congress has been more salutary, or had greater influence in doing away with those terrible and heartrending disasters, formerly of so frequent occurrence, than that requiring the boilers to be so tested before being applied to use.

Such accidents, arising from defects in boilers or machinery, have indeed become very unfrequent, and have been gradually lessened, both in number and importance, as the beneficial influences of the law has

been extended.

It has, however, been brought to the knowledge of the board at its present session that in certain arrangements of the safety valve operators in use in some of the districts the temptation and facilities for overloading the valves beyond the pressure allowed by the certificate of inspection, without risk of detection, are too great to be easily resisted, when from the vicinity of competing boats, or a desire to make certain time, it shall be very desirable to do so; and instances have been cited when, though no serious accident has occurred, yet permanent injury to the boilers has resulted. We have, therefore, during the present session, taken such action upon the subject as we think its importance demands, by passing a resolution that no engineer shall be permitted in any manner to add to the weight placed upon the safety-valve by the inspectors.

The board of supervising inspectors have in the performance of their duties assigned them by the act of August 30, 1852, from time to time established rules and regulations for their own conduct, and that of the several boards of inspectors within the district. These rules and regulations have necessarily been added to, altered and modified, as experience has shown advisable, or as new cases brought

to the notice of the board have rendered necessary.

In many cases, the board have been in doubt as to their authority, on account of the ambiguity of the law. But whenever this, has occurred, their effort has in all cases been to carry out the provisions

of the act according to the true intent and meaning thereof.

These necessary changes, modifications, and additions to the rules and regulations, which have been dictated by experience, has led in some cases to conflicting interpretation of such rules and regulations by the local boards; which conflicting opinions it becomes from time to time necessary for the supervising board to reconcile by a more lucid exposition of their own action.

We are of opinion, however, that the time is approaching when

experience in the operation of the law will not only justify, but require, for a more prompt and efficient execution of its provisions, that all the rules and regulations established by this board shall be revised, compiled, and indexed for the greater convenience of the inspectors and others interested. We are fully aware that alterations and additions to these rules should be made with great caution, and only when imperatively demanded to secure the objects of the law, or to meet new contingencies that may arise. These alterations and additions were necessarily frequent after the law first went into effect, but are decreasing with experience; and it has been in consequence of these alterations and additions that the board have heretofore thought it injudicious to put these regulations into more perfect arrangement and permanent form.

The accidents now most frequent and destructive are those by fire and collision. The frequency of those by fire the board have sought anxiously to reduce by passing such regulations from time to time as experience and the facts attending new cases suggested as beneficial; but we are satisfied that our ability to reduce their frequency or limit in any degree their destructive or fatal results are confined mainly to preventive means and the co-operation of parties interested in keeping those means at all times in order. It is true that destructive fires may in many cases be checked by a prompt application of means at hand for their extinguishment, and it is with an aim at this important result that the board has passed several resolutions in regard to keeping all fire extinguishing apparatus in perfect order and reliable

for prompt use in case of necessity.

Such resolutions have been passed at former sessions with respect to keeping fire-pumps, hose, &c., in order and ready for use as was hoped would secure the result; but subsequent experience has shown that such has not been the effect, and we have therefore at this session passed a resolution that fire-hose must be kept constantly attached to the pump, ready for immediate use. The necessity of this has been shown in some cases where the short delay of getting the hose to its place and attached has been of sufficient duration to permit the fire to attain such headway that all after efforts to control and extinguish it were fruitless; whereas, had there not been such delay, in all human probability, the fire would have been promptly checked in its incipient stage, and deplorable results have been prevented. Accidents by collision, though much less frequent than formerly, still continue to occur, and often with the most disastrous results. collisions, however, more frequently occur between passenger and uninspected steamers, or other vessels, than between inspected passenger and inspected steamers; and the frequency of collisions thus occurring with uninspected steamers, or other vessels, cannot be affected by any action of the board, except so far as such action may influence and control the management of the inspected steamer. Collisions between two inspected steamers comparatively occur but seldom, and we have no doubt will be still more unfrequent as remedial measures suggested by experience shall be brought into force by action of the law.

Soon after this board was organized, rules and regulations were established by them for the government of pilots; and a uniform

system of lights and signals was also established, having for their object the navigating of steamers with increased safety. These rules and this system, though the necessity and propriety of alterations was discussed at the several sessions of this board, remained unchanged until our annual meeting, at Detroit, in 1854; at which time it was represented to the board that the signals by bells, established by them for the meeting and passing of steamers navigating the Mississippi and its tributaries, were not sufficiently reliable, from the fact that, under certain circumstances of wind and weather, the signals, from being made by the bell, could not be heard a sufficient distance to give the required information in time for safety. They therefore, at that meeting, after a very thorough and careful examination, passed a resolution that all steamers upon those waters should be fitted with a steam whistle, and that the signals formerly required to be made by the bell should therefore be given by the steam whistle.

The wisdom of this change was seriously doubted by many, and caused much dissatisfaction among those interested, as it was thought to force upon them an expense entirely unnecessary and useless.

We, however, are gratified in being able to state that, after three years' experience in the use of the whistle as required, the great importance and value of the change is now universally admitted; and we have no doubt that the introduction of the whistle for the purpose has been the means of avoiding many collisions, the loss of much

property, and probably of many valuable lives.

The rules and regulations, with the system of lights mentioned, have, with the exception of introducing the steam whistle, as above stated, remained unchanged until the present time. Such, however, and so important have been the results, upon the western rivers, of the introduction of the steam whistle, that it has been the desire of the inspectors to bring it into general use for signaling in the meeting and passing of steamers, and for other purposes. Thus, in fact, by introducing a proper system, enabling pilots to converse with each other, while the steamers will be at a safe distance apart. The necessity of other modifications and additions to these rules and regulations have been strongly impressed upon us, and we have therefore, at this session, given special attention to this important matter, and have examined it with great care, and acted with the utmost caution, as we are well aware that changes, unless made with caution and judgment, may, for a time at least, have a tendency to produce confusion and perhaps disaster.

During our present session these rules and regulations, for both eastern and western waters, have been revised, modified, and enlarged, as the dictates of experience, during the last five years, have shown to be necessary. The system of lights for steamers on the eastern waters, which has been in use unaltered for the same length of time, we have also revised during the present session, making, however, no change in the principles of the system, but simply adding to and rendering the system, as we believe, more perfect in accordance with the results of experience. We hope and believe that the rules and regulations for the government of pilots, and the system of lights, as thus revised and sent forth at the present

session of this board, are so complete that little, if any, change in either will be hereafter required.

The important question of determining what are and what are not such life preservers as meet the requirements of law has frequently

commanded the attention of this board.

We have not conceived it to be our province to condemn any lifepreservers which are brought before the public, provided they satisfy certain conditions as to buoyancy, portability, and convenience of attachment; but if these conditions are satisfied, have permitted them to be passed and continued in use until experience has shown that for some substantial reason they do not satisfy the requirements of a proper life-preserver. Such has been our course in regard to all inflated life-preservers, whether of india rubber or gutta percha, having become satisfied that they were not such life-preservers as the A resolution was passed at the St. Louis meeting law contemplated. in 1855 that no more inflated life-preservers should be passed by the local boards. At the present session very full and satisfactory evidence has been presented that tin life-preservers are liable to very serious objections, and are not such as the law contemplated, the board have therefore passed a resolution that hereafter tin life-preservers should not be received as a compliance with the law.

In the rules and regulations for the government of pilots on the western rivers, which have heretofore been in force, it was supposed that the rule then put forth in regard to running island chutes was quite sufficient to guard against accident by collision to boats running them; but experience has shown that such has not been the case, and that notwithstanding that rule several collisions have occurred. This we believe to have arisen mainly from a difference of opinion as to the chutes which properly come under the rule. We have also had presented to us at this session petitions from pilots interested, asking us to designate definitely which shall and which shall not be run by day and by night, and such also as from their danger are not to be run by them either by day or night, that the understanding and practice among them may thus be rendered uniform, and the danger of col-

lision reduced.

The board have taken the matter into consideration, and have consulted with several intelligent pilots in relation to it. They have become convinced of the necessity and propriety of designating the chutes as requested. We have, therefore, in revising the pilot rules for the western rivers, embodied a rule giving such designations, being careful, however, so to frame the rule and make the designations to be changed from time to time as the changes and character of the navigation may require. We are confidently of the opinion that this intuitive action will naturally reduce the number of casualties occurring at these several points. That the pilots of these waters have agreed upon the necessity of such rule and designations we consider strong evidence of the wisdom of our course in this matter.

Opposition to the operation of the law has nearly ceased, though such is occasionally presented, when in special cases those upon whom it bears think it oppressive. But that the general principles upon which the law is based are sound, and the law itself beneficial in its

general operation is now seldom denied. Indeed, the evidence to those more immediately interested, and whose opportunities for observing its operations have been ample, is and must be quite conclusive.

The local boards generally have become more and more familiar with their duties, and differences either of opinion as to the requirements of the law or the correct method of carrying into effect its provisions, have been so far harmonized by the board of supervising inspectors that they are constantly decreasing both in number and importance. These differences of opinion arise from various causes; not seldom from the ambiguity of the law and mistaken views of its provisions, but more frequently from the difference in the style and arrangements of steamers and in the character of the navigation. All these differences, however, as they are brought to the notice of the board, receive its attention, and its decisions are generally received as correct without question.

The following tabular statement presents a view of the operation of the several local boards; the number of steamers inspected; their tonnage; the number of pilots and engineers licensed; the number

and character of serious accidents which have occurred, &c.

Accidents of less importance, involving no loss of life or property,

are not reported, and therefore do not appear in the statement.

We would here repeat, in regard to accidents by collision, that the table shows conclusively that of the great loss of life and property collision has been the most fruitful source. Further, that collisions between inspected steamers rarely occur, but that the great majority of accidents of this character are with uninspected steamers or sailing vessels.

When occurring with uninspected steamers, the cause is frequently an utter disregard by such steamers of the rules imposed upon those inspected under the law. When occurring with sailing vessels it is most frequently in the night, and in consequence of the vessel showing no light, or if showing, it is done only when the danger of collision becomes imminent and too late to be avoided.

We would respectfully state, that in our opinion both these classes of collisions may be reduced in number to a great extent by some

slight preventive enactments of Congress.

The following presents a brief account from the reports of the various local boards of the accidents which have occurred in their several districts, when loss of life and property has resulted, showing as far as practicable the causes which have produced such accidents, and the results of the investigation in each case. Slight accidents, involving no loss of life or important loss of property, or which have been of so little importance that no investigation was instituted, are not here enumerated.

FIRST SUPERVISING DISTRICT.

In this district the following accidents involving loss of life have occurred: On the 31st October, 1856, the main lever beam to the engine of the "Bay State" broke while on her regular passage across Long Island Sound, which resulted in breaking cylinder head, connecting rod, piston rod, and many other of the minor parts of the

engine. A child of 10 years of age was near the engine at the instant of the accident and was killed instantly by the escaping steam. No other person was injured. The pecuniary loss by damage to vessel and machinery is estimated at \$5,000.

In June last the steamer "City of New York," while on her passage from Philadelphia to Boston, in a thick fog, grounded on the Nantucket south shoal, and was damaged in vessel and cargo to the

amount of \$35,000.

A very serious collision occurred on Long Island Sound on the morning of the 15th August last between the inspected passenger steamer "Metropolis" and the uninspected steamer "J. N. Harris," by which the "Harris" was sunk in a very few minutes and fifteen persons lost their lives, viz: nine passengers and six of the crew. This case has been under investigation, but no final decision as to the cause of the accident has been made. The case is still under examination; much time has been required in collecting the evidence in this case, as the witnesses were scattered in various directions, and much of the testimony had to be obtained from a distance.

SECOND SUPERVISING DISTRICT.

There has been no accident to passenger steamers in this district involving loss of life. But the steamer "Central America" (formerly the "George Law") foundered at sea on the 12th September last in a severe gale, while on her passage from Havana to New York. Very full particulars of the circumstances attending this terrible disaster have been published in the newspapers of the day. From the best information that can be obtained, it is supposed that no less than 423 persons lost their lives.

This steamer having been constructed under contract with the United States for the purpose, if desired, of being converted into a "war steamer," was not inspected by the local board of inspectors, but by a chief engineer of the navy. Her certificate would have run out soon after the termination of the voyage in which she was lost.

Since the return of the survivors from this catastrophe, an investigation has been entered upon in consequence of certain charges made against the chief engineer, to ascertain, if possible, how far the charges are justified by the facts. No decision has yet been rendered, as the investigation is not yet completed. In the same terrible gale of the 12th September last the steamer "Norfolk" (late the "Penobscot") was on her regular passage from Philadelphia to Norfolk and Richmond, deeply laden with merchandise, and having on board twenty-six passengers and a crew of twenty-one persons, when attempting to beach the vessel became unmanageable from loss of the rudder and foundered about twenty miles from land, off Hogg island, between the capes of Delaware and Virginia.

The passengers and crew were all saved by means of the life-boat and life-preservers, and after being several hours thus exposed on the open sea were picked up by other steamers. Great credit is awarded to the officers and crew for their coolness, judgment, and decision, by

which they succeeded in saving the lives of all on board.

There have been in this district within the past year two cases of collision between inspected passenger steamers and other vessels.

The first occurred on the Delaware river on the 18th August last between the passenger steamer "Keystone State" and the barge "A Groves," by which the barge was cut through and sunk in a very few minutes. No lives were lost by the collision.

The second occurred also on the Delaware river, between the inspected "State of Georgia" and the freight steamer "Union," on the night of the 24th August last, by which accident the "Union" was so badly damaged that it was thought necessary to run her ashore immediately to prevent her sinking. There was no loss of life by the collision.

These two collisions were caused mainly, if not entirely, for the want of proper lights and signals on the uninspected vessels, in consequence of which their position was not discovered until too late to avoid collision.

There have been three passenger steamers destroyed and one partially damaged by fire while lying at their wharves. The steam vessels "Norwalk," "Splendid," and "Knoxville" were burned at their respective wharves in the city of New York. The first was rebuilt and is now running (under the name "Aurora,") and the other two were nearly a total loss.

The steamer "Mayo" was also slightly injured by fire. There was no loss of life in either of these cases, and as the fire occurred while lying at the wharf, the licensed officers were not in any way charged

with misconduct, and no investigation was necessary.

THIRD SUPERVISING DISTRICT.

In this district on the night of October 14, 1857, on the Chesapeake bay, a collision occurred between the steamer "Monmouth" and brig "Windward," by which sad event nine lives were lost. The testimony in this case, obtained from reliable witnesses, clearly proved that this accident was caused by the negligence or carelessness of the pilot of the brig. The steamer's lights were up, as required by regulations, and clearly seen by persons on the brig some time before the collision. This the pilot of the brig acknowledged, but took the steamer to be a vessel at anchor. And yet he steered the brig so as to strike the steamer a few feet abaft the larboard shaft, thereby disabling one of her wheels, and causing considerable damage to the hull, causing her to leak badly. The brig had no lights up, and was going at the rate of eleven to twelve knots per hour. After the collision the passengers and crew could have left the steamer in the brig; but they not apprehending immediate danger determined to remain on board. The steamer was anchored, and continued so for thirty hours after the collision. The passengers and crew would have been undoubtedly saved had not the smoke-pipe blown down, and in its fall carried away the steam-pipe, thus depriving them of the use of the engine, whereby they had managed to keep the vessel's head to the wind and the leak under. When the officers of the steamer saw there was no hope of saving the vessel they at once set about making preparations to save the passengers and crew by cutting away the hurricane deck for a float, (their boats being lost—one stoved by the collision, and the other being lowered without proper care was swamped and lost.) This float saved all except the nine persons referred to, eight of whom positively refused to leave the steamer, considering themselves more safe there; one left on a small float, and was never heard of afterwards. It is due to the officers to state that they used every persuasion to induce those remaining on the wreck to leave with them, but without success, and in consequence were lost. There is no doubt this deplorable accident would not have occurred had the sailing vessel been compelled to carry and exhibit lights.

A collision occurred between the steamer "Louisiana" and the schooner "Serroset," resulting in both vessels being injured to a considerable extent, but without loss of life. This schooner was sailing without lights, and gave no evidence of her approach to the steamer until too late to avoid a collision. The evidence of witnesses exonerate

the officers of the steamer from all censure in this matter.

On the night of the 27th August the steamer "St. Nicholas" came in collision with the schooner "Lightning" abreast of Annapolis, caused by the negligence of the pilot of the steamer; and, after a careful examination of this case, the pilot's license was revoked. The "St. Nicholas" was so badly injured that it was necessary to run her ashore. The schooner was also badly damaged. There was, however, no loss of life by the accident.

FOURTH SUPERVISING DISTRICT.

On the Mississippi river, on the 21st day of February, 1857, at one o'clock in the morning, a collision took place between the steamer "Belfast," an inspected steamer, and the "Humbolt," an uninspected freight steamer, in the chute of island No. 75, by which accident the "Humbolt" was sunk immediately, and fifteen persons of the crew on board the "Humbolt" lost their lives. There was no loss of life on the "Belfast." The estimated loss of property by this collision, on vessel and cargo, was one hundred and fifty thousand dollars.

In the month of May last, on the steamer "Forest Rose," while on her passage down the Mississippi, the boilers exploded, entirely destroying the boat, which, with the cargo, were a total loss. The engineer on watch at the time run away, and most of the officers and crew were killed; so that no evidence could be obtained as to the cause of the accident, but supposed to be the negligence of the engineer on watch. There were by the accident eleven of the crew who lost their lives, but none of the passengers.

The steamship "Louisiana," while on her passage from Matagorda bay to New Orleans on the 2d of June last, between two and three o'clock in the morning, when near Galveston island, was destroyed by fire. By this melancholy disaster sixty-six persons lost their lives,

the larger portion of which were passengers.

This accident was investigated by the inspectors, and, though no positive information could be obtained as to the origin of the fire from

the testimony elicited, it was supposed to have originated in the kitchen, and through the carelessness of the cook.

FIFTH SUPERVISING DISTRICT.

In this district there has been but one accident to a passenger steamer involving loss of life. This occurred to the Steamer "J. P. Tweed" when on her passage from St. Louis to New Orleans, and near St. Genevieve ran in the night upon a sunken log, by which the bottom was stove in and the boat sunk. By this disaster three of the passengers were drowned. No investigation in this case was deemed necessary, as the inspectors upon inquiry were satisfied that no blame attached to the licensed officers.

Several accidents have, however, occurred involving loss of property, but they are wholly of a character incidental to this peculiar navi-

gation.

There has been a total loss of ten vssels with their cargoes by sinking from coming in contact with sunken logs, snags, &c. The estimated loss by the destruction of these vessels is \$273,000.

There has been also twelve steamers sunk by similar causes and

afterwards raised; amount of loss estimated \$74,500.

The steamer "Euclaire" in April last, while on her passage from Cincinnati to St. Louis, when about twenty miles below St. Louis, came in collision with the inspected steamer "North America," by which the former was sunk, but no loss of life to either passengers or crew resulted. The case was investigated by the inspectors, who became satisfied that the collision was caused entirely by the improper course of the pilot of the "North America." His license was, therefore, suspended for six months.

The steamer "Golden Gate," while lying at a landing on the Mississippi river, was destroyed by fire; no loss of life, but boat and

cargo a total loss.

In this district there has been five steamers destroyed by ice the past winter while laid up at their landings; all of them a total loss; the sum estimated at \$68,000.

In this district the loss of property by accidents to passenger steam-

ers was-

In the	year	1855	\$955,000
"	"	1856	1,056,000
"		1857	

The number of passengers carried on passenger steamers for the year 1855 was 1,046,249; five passengers' lives lost and thirteen of the crew.

For the year 1856 the number was 468,442; one passenger's life lost and eleven of the crew.

For the year 1857 the number was 593,778; three passengers' lives lost.

This statement shows conclusively the increased degree of safety to life in travelling upon the steamers of the western rivers as compared with such travelling prior to the passage of the steamboat law.

SIXTH SUPERVISING DISTRICT.

The inspected steamer "Governor Powell," when rounding out from the landing at New Albany, on the 26th March last, came in collision with the passenger steamer "Grapeshot," by which the "Grapeshot' was sunk. No lives were lost by the accident. This case was examined by the inspectors, and the cause was ascertained by them to be mismanagement on the part of the master and pilot of the "Governor Powell." It was also brought to light in the course of the examination that the pilot acting at the time had no license. Steps have been taken to prosecute both pilot and master for this violation of the law.

Another disaster which we have to report in this district is the collision between the "Rainbow" and "Julia Dean," both passenger steamers, near Mount Vernon, Indiana, on the 26th April last. By which collision the "Julia Dean" was sunk and five of the crew were drowned. The investigation instituted by the inspectors resulted in the decision, charges the pilots of both boats with improper manage-

ment, and the licenses of both were suspended.

There have been, also, three other collisions in this district, none of which were, however, very serious in their character, there being no loss of life, and but slight damage to the vessels. In one of these cases the accident was caused by the recklessness of one of the pilots; his license was suspended. In a second case the accident was brought about by the neglect of the pilots of both boats to give the required signals for meeting and passing. The pilots' license of both boats were suspended for 30 days. In the third case the pilot of one of the boats failed to make the required signals for meeting and passing, and also failed to steer his boat according to the signals given by the pilot of the other boat. For this offence his license was suspended for four months, and the license of the pilot of the other boat was suspended for thirty days for not stopping his engines in time to avoid collision when the proper signals were not made by the approaching boat.

SEVENTH SUPERVISING DISTRICT.

There has been no accident to passenger steamers in this district by which the life of any passenger has been lost or their person injured, and but one accident which can be regarded as of a serious character.

The steamer "Kentucky," when on her passage down the Ohio river, near New Richmond, in November last, burst her steam-pipe, by which accident three of the crew lost their lives. The case was promptly investigated by the inspectors, and it was ascertained that the cause of the accident was defective workmanship but of such character as not to be visible upon examination nor discovered by application of the hydrostatic test, when testing the boilers a short time previous.

The "Kentucky" was a new boat, and had been running but a

short time.

EIGHTH SUPERVISING DISTRICT.

On the 29th day of October last the steamer "Superior" was driven ashore near Grand island, on Lake Superior, in a heavy gale and snow storm, and went to pieces. The vessel and cargo a total loss. By this disaster eleven of the passengers and twenty-three of the crew lost their lives; several lost their lives at the time the vessel went ashore, and the remainder lost their lives by exposure afterwards.

The steamer "Toledo," on the 24th October last, on her voyage from Buffalo to Milwaukie, foundered, while at anchor in a heavy gale, near Sheboygan, on Lake Michigan; the vessel being entirely broken up at her anchors. By which terrible disaster seventeen passengers and twenty-three of the crew lost their lives. Only two of the crew and one of the passengers were saved, and they were driven on shore by the heavy sea running at the time.

The steamers "Royal Arch" and "Lady Franklin," in the month of October last, were sunk in the upper Mississippi by contact with logs in the bottom of the channel. Both boats were an entire loss,

but there was no loss of life.

The steamer "H. T. Yeatman," in the month of April last, in attempting to make a landing at Hastings, on the upper Mississippi, struck a rock, was broken, and foundered. Boat and cargo a total

loss. No loss of life either of passengers or crew.

In the month of April last the steamers "Arcola" and "Falls City," which had been lying at Reed's landing, at the foot of Lake Pepin, awaiting the opening of the lake, attempted to cross the lake through a passage which had opened in the ice. The ice moved with a change of the wind and both vessels were crushed and sunk.

The "Arcola" was a total loss, but the "Falls City" was afterwards

raised. There was no loss of life on either vessel.

On the 3d of July last the boiler of the steam boat "Berlin City," running upon Fox river in Wisconsin, exploded, by which disaster three passengers, with the engineer and one deck hand, lost their lives.

An investigation was had by the inspectors, but as the engineer was killed no satisfactory evidence as to the cause of the explosion could be elicited; it was supposed from the information obtained to

have resulted from low water in the boiler.

On the 1st October last the steamer "Iowa" came in collision with the barque "E. B. Morgan;" and on the 19th of the same month the steamer "Oriental" came in collision with the schooner "Nebraska." The board are not in possession of the particulars of these two accidents, as no detailed report has been received from the local board at Chicago.

NINTH SUPERVISING DISTRICT.

In this district there has occurred during the past year four serious

accidents involving loss of life and property.

In the early part of October last the steamer "Louisville" was destroyed by fire while on her passage from the head of Lake Ontario to Ogdensburg. It appeared upon an investigation of the case, that the

fire originated in the carelessness of a person smoking; as soon as the fire was discovered, the fire-pump was manned, but was broken almost immediately after they commenced working it, and all other efforts made for the extinguishment of the fire were of no avail. The vessel and cargo were entirely destroyed. We are gratified in being able to add that there was no loss of life to either passengers or crew.

On the 4th November last the steamer "J. S. Brooks," when on her passage down Lake Ontario, and between Oswego and Sackett's Harbor, foundered in a severe storm, by which catastrophe all on board perished. It is supposed that there were about fifty persons on board, viz: thirty passengers and twenty of the crew. No information by which any opinion can be formed as to the immediate cause of

the disaster. Total loss by this disaster was \$54,250.

The steamer "Wisconsin," while on her passage through the Welland canal, exploded her boiler, caused by a stopping of a connecting pipe. By this disaster one of the crew lost his life. The vessel was towed to Buffalo, and the boiler having been repaired, the local board at Buffalo were called upon to inspect it. Upon examination, the inspectors found the boiler so defective that it was condemned for use on

a passenger steamer.

On the 29th day of November last the inspected steamer "Golden Gate," while endeavoring to make Erie harbor in a very severe gale, was wrecked and went to pieces. An inquiry was made into the case, from which it appeared that in the storm, while off Erie peninsula, the rudder chains parted, and the vessel was rolling about at the mercy of the waves for about two hours, in which time the chains were repaired. The steamer was then again put on her course, and when they had proceeded about five miles below the entrance to Erie harbor, the gale having increased in violence, (the vessel at this time leaking badly,) and the master, fearing that the rudder chains would again give way, attempted to run back and make the harbor of Erie; and when about a mile from the entrance the rudder chains again gave way, and before any arrangement for steering the vessel could be effected she struck upon the bar and went to pieces. Every effort was made by the officers and crew to save the vessel and passengers. By this disaster one of the crew lost his life. The remainder of the crew and all of the passengers were saved by the life-boats belonging to the steamer. Amount of loss by vessel and cargo \$45,000.

The steamer "Manhattan" was driven on the pier at Cleveland, on the 29th day of November last, in a severe gale. No lives were lost, and the vessel was subsequently got off and repaired at an expense of about \$8,000. The same steamer, when on her passage through "Sault" river, on the 8th of May last, ran upon a rock, causing her to leak so badly that she soon sunk. No lives were lost, and the vessel was subsequently raised and repaired at an expense of \$3,500. The

damage to the cargo by the accident was about \$5,000.

An examination of this statement of accidents in the several districts will show that while there has been ten collisions of a serious character, but one of these was between inspected steamers, and there was no loss of life. Eight of the remaining number were either with uninspected steamers or with sailing vessels, and resulted in the loss

of twenty-nine lives. The tenth collision—viz: that between the "Metropolis" and the "J. N. Harris"—was strictly with an uninspected steamer; for although the "J. N. Harris" has been an inspected steamer, her certificate had run out, and had not been renewed at the time of the collision, though application had been made for a renewal. By this collision fifteen lives were lost.

It will also be observed by the statement that accidents by explosions have been very rare the past year. But three explosions have occurred, by which the lives of but three passengers and fourteen of the crews have been lost. So far as statistics furnish information to the board, we are not aware of but two explosions of the boilers of a steamboat constructed under the regulations established by the law of

1852.

Other accidents to machinery have caused the loss of life to one passenger and three of the crews. During the past year the losses by fire have been quite disastrous. From but one accident by this cause, however, has there resulted loss of life, and in that case it was very

severe. No less that sixty-six persons were lost.

By far the most serious disaster of the past year has been the foundering of the "Central America" (formerly the "George Law") at sea in a terrible hurricane, and by which 423 lives were lost. Very severe strictures have been made upon the loss of this vessel, and many of them without foundation or truth. It has been asserted that it was a very old vessel, and the name had been changed to mislead the public. This can hardly be possible, as she was the most recently built vessel in the line, and was considered by many good judges to be a superior vessel in many respects. The inspection of this steamer had been made by a naval engineer, as required by the 42d section of the steamboat act.

Although the certificate had nearly run out, and a new one would have been necessary before making another voyage, as to the causes which led to this serious disaster, the accounts are so various and contradictory, that it is almost impossible to come to a reliable conclusion. The local board at New York are now engaged in investigating the charges against the licensed officers of that vessel, and it is not improbable that this investigation may throw more light upon the circumstances and causes which led to this fatal result.

The reports furnished by the local boards frequently mention instances in which the inspections and tests required by the law have brought to light latent defects, which otherwise, in all probability, would only have become known upon the occurrence of some serious and fatal disaster; also cases in which the precautionary measures required by the law have undoubtedly been the means of saving both

property and life.

The local board at Buffalo reports that the steamer "Western Metropolis" caught fire while lying at the dock. The fire was promptly subdued by the facilities at hand, and but slight loss ensued. Also, the steamer "Tonawanda," while on her passage across Lake Huron, caught fire near the boiler in the hold. Upon the first alarm, the steam valves provided for that purpose were opened, which, together with the fire-pumps, soon extinguished the fire, with but slight damage. Another board reports that, in one case of applying

the hydrostatic test, the water bottom of the boiler was found deficient, and, on examination, it was found necessary to remove the old

bottom entirely, and replace it with a new one.

Another reports that, upon application of the test to a boiler, it gave way at only ten pounds above the intended working pressure, and, upon examination, it was found that one entire sheet of the lower part of the shell had been blown out. The same board reports that, in another case, one of the main flues of a boiler was collapsed by the test, and, upon examination, was found to have been seriously weakened by oxidation. Another reports that, upon application of the test to a boiler on a passenger steamer, one of the flues collapsed at a pressure but little above that allowed to be carried by the previous year's certificate. And in applying the test to another boiler, sheets on the side were cracked for a length of four or five feet, and opened to the extent of ten or twelve inches.

It is scarcely necessary for us to say that, had any of these fractures to boilers given way under pressure of steam while under weigh, instead of under the cold water test, most serious, and probably exten-

sively fatal, disasters would have ensued.

Many of the local boards, in their annual reports, mention difficulties they have encountered in the performance of their duties, and frequently make suggestions, which are found very valuable, and acted upon by this board.

As giving some idea of the extent of the passenger steamer navigation of the country, we would state that the number of inspected steamers now running, and the number of pilots and engineers now licensed, are as follows:

Passer	nger s	${ m teamers}$	••••••
The to	nnag	e of which is	
There	have	been licensed	l pilots
	. "		engineers

This statement does not include the steam navigation of the Pacific coast, as no report has been received from the local board at San Francisco.

When the steamboat law was passed, in 1852, steam navigation upon the Pacific coast was almost unknown; but since that time the use and development of the steam marine on that coast has been almost without parallel. Where at that time the drum of the paddle-wheel or the shrill voice of the steam-whistle were wholly unknown, now the steady progress of the steamer, regardless of wind or current, is a matter of daily occurrence.

The steam marine of the waters of the upper Mississippi and of the northern lakes, and the headwaters of many of the large western rivers, has been rapidly developed and extended during the same period of time. Such has been the increase and extension of steam navigation in various directions, that the districting of the country, as originally made among the various supervising inspectors, has become quite unequal. No district of the country has, however, suffered from this inequality, except the Pacific coast.

Many complaints have from time to time been received from that coast that the law was not there properly carried into effect; and be-

fore the lamented death of Mr. Muir, the former inspector of the fourth district, the matter had received the consideration of this board; and in accordance with the wish expressed, Mr. Muir had made his arrangements for proceeding to that portion of his district immediately upon his return from Texas. His death, while upon his return voyage, however, prevented his consummating the arrangement. The subject has again been brought to the attention of the board, and, with the view of meeting the case promptly, arrangements have been made by which the inspector from the fourth district is to proceed to the Pacific coast immediately after his return from the present meeting, and the duties of the other portions of his district are to be assumed by the supervising inspector of the adjoining districts when required.

A committee has also been appointed to collect such statistics and information as are necessary to a fair and equitable redistricting of the country, in accordance with the present condition and prospective increase of the steam marine, as indicated by its progress for the past five years, and report the same for action at the next meeting of the board.

A supplementary bill amending the steamboat act has been before Congress at its last two sessions, and although it received the consideration of the committee of that body it has received no final action.

Our increased experience in the operation of the law but confirms us in the opinion that, could a bill containing similar provisions to those in the bill mentioned be passed by Congress, it would add much to the value and efficiency of the law, and result in increased safety to the lives of passengers.

We would respectfully refer the honorable Secretary of the Treasury to our former reports for our views more in detail of the deficiencies of the present law, and the amendments and additions believed by us

 $\mathbf{desirable}.$

In addition to the mark or stamp now required to be placed upon all boiler iron intended for the boilers of passenger steamers, it is very desirable that the thickness by wire gauge should also be stamped, as it would facilitate much the inspection required, for the reason that it is with the utmost difficulty that the thickness of the plates can be measured after they are worked into boilers. Whereas, if the thickness was stamped, the stamp could in most cases be examined.

In order, however, to render this stamping reliable, the same penalties as now apply to false stamping the quality of the iron should

also apply to a false stamping of the thickness.

In closing, we would respectfully refer the honorable Secretary to the proceedings of this board during its present and former sessions for a more detailed account of the operation of the law during the five years it has been in force.

Also, the various difficulties and obstacles which have been met by

the inspectors in carrying out its provisions.

All of which is respectfully submitted.

By order,

JOHN S. BROWN, Secretary of Board of Superintending Inspectors. TREASURY DEPARTMENT,
Office Light-house Board, November 14, 1857.

Sin: I have the honor, by direction of this board, to transmit, herewith, the annual report of this office in duplicate, in compliance with the directions of the department of the 22d ultimo.

Very respectfully,

THORNTON A. JENKINS,

Secretary.

Hon. Howell Cobb, Secretary of the Treasury.

No. 16

TREASURY DEPARTMENT,
Office Light-house Board, November 1, 1857.

Six: I have the honor by direction of this board, and in compliance with your instructions of the 22d ultimo, respectfully to submit the following report, showing the present condition of the lights, beacons and buoys of the United States, and the operations of this office, for the fiscal year ending 30th June, 1857.

The systematic plan for an economical administration of the light-house establishment service, and for improving and perfecting those aids to navigation which had been authorized by the different acts of Congress subsequent to the passage of the law of August 7, 1789, which enacted "that all expenses which shall accrue from and after the fifteenth day of August, one thousand seven hundred and eighty-nine, in the necessary support, maintenance and repairs of light-houses, beacons, buoys and public piers, erected, placed, or sunk, before the passage of this act, at the entrance of or within any bay, inlet, harbor, or port of the United States, for rendering the navigation thereof easy and safe, shall be defrayed out of the treasury of the United States," was commenced by this board under the direction, orders, and instructions of the honorable Secretary of the Treasury on the 9th of October, 1852, under the authority of the act of Congress of 31st August, 1852.

At that time there were 325 light-houses and lighted beacons, and 38 light-vessels, making an aggregate of 343 light stations and 371 lights of all orders or classes, distributed in the waters and along the

coasts of the Atlantic, Gulf and northwestern lakes.

A few buoys and beacons were placed along the coast and in the bays and harbors of the most prominent seaports, without system or plan, and often misleading instead of guiding the mariner.

There were no lights or other aids to navigation at that time in

the harbors or bays on the Pacific coast of the United States.

There are now on the Atlantic, Gulf, Lake, and Pacific coasts of the

United States, 548 light-house and light-vessel stations, with an aggregate of 602 lights; also, 31 lights remaining either to be condemned according to law, or to be built in obedience to the directions of Congress, as soon as valid titles to the sites are obtained; making, after allowing for all probable condemnations and the discontinuance of such as time has shown to be wholly unnecessary for the general interests of commerce and navigation, an aggregate of 579 light stations, including light-vessels, and 627 lights.

The buoyage and beaconage, at that time almost entirely neglected, is now, it is believed, unsurpassed in systematic arrangement, in reli-

ability, and in economy of administration.

The number of buoys and beacons may be put down, in round numbers, at not less than 4,500 or 5,000, with duplicates (and at most places along the coast spare buoys) to replace those to be taken up each spring and autumn for cleaning and painting, and to replace those removed or destroyed by ice or by storms, and by being run into and sunk by steamers and other vessels.

The entrances to the principal harbors, and ship channels leading to them, are marked by large nun and can buoys, made chiefly of iron,

which have been introduced within the last four years.

The previous reports from this office during the last five years have informed the department and Congress of the extremely dilapidated condition of the towers and buildings, of the inferior quality of the illuminating apparatus, and of the wasteful expenditures of oil, wicks, chimneys, and other necessary supplies, owing to the large number of lamps employed at the different light-stations, many of which, with proper illuminating apparatus, would have incurred less than one-tenth the cost for far more brilliant and better adapted lights.

The light-vessels were found to be in a state of inefficiency, some of them absent from their stations for months at a time, without substitutes to occupy their places, with an inferior description of lamps, consuming large quantities of oil without producing sufficiently powerful lights to be seen at the required distances, or an adequate return for

the expense incurred.

The estimates and appropriations for the support and maintenance of the light-house establishment, as it was found, for 1852-'53, based upon the expenditures of the previous year, amounted to \$721,668 65 for 371 lights.

The estimates for the fiscal year to end June 30, 1859, which have been submitted to you by this board, amount to \$79!,134 90 for 627 lights for the entire coast, including that of California, Oregon, and

Washington.

The estimates for this service for the last five years were made pro rata with those of the years 1852-'53, the increase being in consequence of the large number of new lights authorized by Congress, and the necessity for repairing and rebuilding nearly all the towers, dwellings, beacons, and light-vessels, and to afford the necessary means for substituting, as rapidly as possible, the more perfect, less destructible by wear and tear, and more economical apparatus, the

introduction of which commenced in France about forty-five years ago, under the management of the distinguished engineer, Fresnel,

and which, slowly at first, but rapidly within the last twenty years, has been introduced throughout the maritime world, until at the present day no other new apparatus, at least to any extent, is made or used for the illumination of the coast of any country.

In 1838 Congress passed an act directing the Secretary of the Treasury to import certain illuminating apparatus, for the purpose of settling the question of conflicting claims to superiority and to economy.

Under that act a first-order lens for a fixed light, and a second-order lens for a revolving light, upon the system of Fresnel, were constructed and set up in the two towers at Navesink, New Jersey, to mark the approach to the bay of New York.

In 1848—49 a third-order Fresnel apparatus was constructed for the Brandywine Shoal light-house, in the Delaware bay, which had been constructed, by the special direction of Congress, under the Bureau of Topographical Engineers; and at about the same time another light-house structure of a very difficult character was authorized to be built, under the orders of the same bureau, which was fitted with a fourth-order Fresnel apparatus; and in 1849 special authority was asked and obtained from Congress for the erection of an important seacoast light, to be fitted with apparatus on the new system.

In the light-house bill approved 3d March, 1851, Congress directed that "hereafter, in all new light-houses requiring new lighting apparatus, and in all light-houses as yet unsupplied with illuminating apparatus, the lens, or Fresnel system, shall be adopted, if, in the opinion of the Secretary of the Treasury, the public interests will be

subserved thereby."

Thus it will appear that at the time the Light-house Board was organized under the act of August 31, 1852, there were but five lights at four stations fitted with apparatus that had long before been shown incontestably to be in point of economical effect in no case less than 4 to 1, as compared with the catadioptric or reflecting light system, and in point of power and brilliancy the proportion in per centage was 83 to 16—that is, the consumption of oil would not exceed one-fourth in the new system of what was actually required in the old, and at the same time the new system producing for the benefit of the navigator more than five times as much light with this one-fourth part of the oil required for the argand lamps and parabolic reflectors.

But even this comparison is too favorable to the state of the light-house establishment as it existed up to 1853, inasmuch as the apparatus was not, of its kind, the best that could be made, and also from the fact that the great majority of lights (those in the bays, sounds, rivers, and harbors) were fitted with a much larger number of lamps than was necessary, even under that system, attributable, however, to the great inferiority of the apparatus, which, it would seem, it was attempted to remedy by increasing the number of lamps at each

station.

The estimates for 1853 gave 3,093 lamps for the 331 light stations. Estimating at an average of 10 lamps for each new light authorized or built since that time, the number of lamps to be fed with oil, to be supplied with wicks and chimneys, and in proportion to be supplied with the various articles of expensive cleaning materials, would, under

the old system, have amounted to the large number of 5,560 lamps, requiring an annual supply of not less than 222,400 gallons of oil, computing the consumption at 40 gallons per lamp, which is the minimum rate. The cost of oil has been as high as \$2 per gallon at the warehouses of the manufacturer, and has been estimated for the next year (1858-'59) at the rate of \$1 60 per gallon.

The oil which it has been estimated will be required for all the light-houses and lighted beacons now existing, and also those which may be built during the next fiscal year, will amount to about 48,500 gallons, saving annually 173,900 gallons of oil; which quantity includes the supply for the few remaining lights fitted with apparatus of the old system, which it has not been possible yet, with the means provided by Congress, to renovate and refit.

It has been already stated that at the beginning of the year 1853 there were one first-order Fresnel apparatus; two second-order; one third-order, and one fourth-order; making an aggregate of 5 lens, or catadioptric apparatus, out of the 331 lights then existing.

At the date of this report there are 443 lens apparatus either in position in the different lights or in store ready for placing as soon as weather or other circumstances will permit, and all ordered for

new structures authorized by Congress.

There remain to be refitted, or means to be provided for refitting them, only the following lights of the whole number on the list, viz: First class light station at Cape Ann, two towers and two first-order lenses; Boston light station, one tower, with first-order revolving lens; Cape Canaveral, Florida, light station, one tower and first-order revolving lens; Southwest Pass, entrance to Mississippi river, first class station, iron screw-pile tower and second-order fixed lens.

The lights at Southwest Pass and South Pass of the Mississippi should be discontinued after the completion of the Southwest Pass screw-pile tower, which was authorized August 4, 1854, and for which \$45,000 was appropriated, leaving about \$70,000 to be appropriated

for its entire completion before commencing the work.

The annual appropriations for renovations, repairs, &c., of lighthouses, within the period referred to, have been employed to the best possible advantage in rebuilding such light-houses as were in imminent danger of falling to pieces, and, where special appropriations had not been made for rebuilding them, in providing the necessary improved and economical apparatus, fitting the lanterns and towers for receiving them, and in placing them; and with those means alone the whole of the light-houses existing in January, 1853, have been provided with new apparatus of the most approved kind, which combines the greatest advantages yet discovered in the science of lighthouse illumination—of power, durability, and economy.

During the same period of time the light-vessels have been put into thorough repair, in many cases equivalent, in point of efficiency, to rebuilding, and lights fitted with the most approved illuminating apparatus. Parabolic reflectors and argand fountain lamps fitted in such a manner as to render the lights, when the vessels are in constant motion by the sea, nearly as powerful as those of equal intensity

in towers on shore.

The remaining light-vessels occupying positions in bays, sounds, or rivers, where the sea is never very rough, have been fitted with the best illuminating apparatus that could be devised for economy, and at the same time to fulfil the wants of the navigator in those localities.

It seldom occurs now that a light-vessel is required to leave her station for repairs, even in the summer months, before the arrival of a relief light-vessel to occupy the station during her withdrawal. This precaution is indispensable to insure that confidence on the part of mariners which can alone insure to commerce and navigation the full benefits from the light-house service which it was evidently designed by Congress to confer in making the appropriations for these aids.

The frequent casualties to light-vessels, especially during the winter months, render light-vessels much less reliable than lights on shore,

and at the same time much more expensive to keep in order.

To prevent, as far as possible, the absence of these light-vessels from their stations at all times, but more especially during the inclement season of the year, when it is of the greatest importance that they may be confidently and safely run for, they have been provided, as rapidly as the means available would admit of, with spare anchors and cables to be used in case of parting the cables or by dragging the anchors by which they ride, instead of, as in former years, allowing them to go into harbor and remain during the greater part of the period during which their presence at their stations is of the most importance to mariners.

Duplicate anchors and cables are provided and kept on hand at various points along the coasts adjacent to light-vessel stations to replace any that may be lost; and now a few hours, ordinarily, suffice to restore a light-vessel to her station after leaving it from stress of

weather.

In making alterations and repairs, as well as rebuilding lightvessels, special attention has been given to the fitting of hawse pipes, placing bitts for riding by, and to the adoption of means to prevent the slipping and parting of cables, and to the safe and easy riding of

these vessels during heavy gales.

Plain but full and explicit instructions and directions have been prepared, approved by the department, and placed on board of each light-vessel, to guide the keepers and crews in the performance of their often difficult and responsible duties. The rigid enforcement of these rules by the department has resulted in the saving of large sums heretofore required to replace lost anchors and cables, and in repairing damages to the hulls, spars, sails, and boats of these vessels.

The appointment of seamen as keepers and mates of these vessels by the department has also resulted most beneficially to the economy

and efficiency of this branch of the service.

During the last unusually severe winter the most serious casualties to light-vessels occurred to those in charge of men who were not seamen, and who, for want of the requisite practical knowledge of their duties, suffered their vessels to be greatly damaged by the ice; while those in their immediate vicinity, in charge of faithful and competent seamen, escaped unharmed by reason of judicious movements and the exercise of good judgment.

The day beacons along the coast and in the navigable waters had, from long neglect, become nearly useless to the mariner, for want of proper distinction by color, &c., and many of them had fallen into such a dilapidated state that they were obstructions to navigation.

None remain to be repaired or rebuilt. They are reported to be in a creditable condition, having been thoroughly restored or repaired by the use of the best materials, and put together in the best manner.

Many of these day marks, which have been authorized from time to time as appropriations were made for them, have been built (on sites of great exposure to the constant effects of the sea and strong tides, and to masses of floating ice) in a manner evincing a great want of either engineering skill, or a correct knowledge of the various elements of destruction by which they are surrounded.

Small iron spindles upon rocks awash, and slight masonry structures upon sands, over which strong tides are constantly passing, and, on the eastern coast, accompanied by heavy masses of floating ice, serve only to annoy and disappoint the mariner who relies upon them as guides, and are a source of never-ending expense to the government in replacing or repairing them.

The attempt has been made, so far as the means available would admit, to rebuild those beacons which have been destroyed or required to be repaired, as well as those which were in danger of being destroyed, in such a manner as to effectually resist the various elements to which they may reasonably be expected to be subjected.

It is believed that but few additional aids to navigation of any kind can be reasonably asked for in any part of the Atlantic, Gulf, Lakes, or Pacific coasts of the United States. It is also believed that the present aggregate number of lights authorized need not necessarily be increased, and but few additional beacons and buoys will be required.

One important light not yet authorized is strongly recommended to complete the entire system of lighting the Florida reef, to be placed, at a cost of about \$130,000, on or near Alligator reef; and two lights have been recommended by interested parties in California, one to mark the seacoast at a point about halfway between Monterey and San Francisco bays, near Anna Nuevo, or Pigeon Point, at an estimated cost of \$36,311; and the other on the southern end of Mare island, to aid vessels passing through the straits of Carquines and San Pablo bay, and mainly to serve as a guide to the navy yard at Benicia—estimated cost, \$9,989.

These are the only three points, in addition to those already authorized, of which this office has any knowledge at present, at which lights are required, while many of those already appropriated for will be condemned when the examinations required by the terms of the law making the appropriations shall have been made. When to this number is added those lights which will be reported in this communication as, in the opinion of this board, no longer necessary to the safety of navigation, it will, it is believed, reduce the present number considerably below the aggregate now existing and authorized.

When the authorized lights are erected on the Pacific coast, there will be very little, if anything, more to be done; and the Atlantic, Gulf,

and lakes have been already well provided for, with the single excep-

tion stated, (Alligator reef.)

The light-vessel service, from its comparative unreliability in times of greatest need, and its greater proportional expense for maintenance and repair, might, in the opinion of the board, be advantageously improved by its gradual diminution, and the substitution, as the present vessels become unfit from decay and age for further use, of iron screw-pile foundations for small lights at the points now occupied by such light-vessels as will admit of the change being made, having a

proper regard to the economy of the operation.

The light-vessels in the sounds and rivers of North Carolina, and all of those south of the capes of Virginia, except the three occupying seacoast positions at Frying Pan shoals, off Cape Fear; Rattlesnake shoals, off Charleston; and Martin's Industry, off the mouth of the Savannah river, might be dispensed with, and small permanent lights erected on iron screw-pile foundations, at an average cost of about \$10,000 each; which light-houses would be built of more durable materials, less expensive in annual repairs, and maintained at less than one-half, and most probably at one-third, the annual cost of maintaining the smallest light-vessel now afloat. We would get rid of the expense of the crews and their rations; and the consumption of oil in the light-house would not, in any case, exceed one-eighth, and, in cases of double lights on board of light-vessels, frequently necessary as a means of distinction, and the only one practised, one-sixteenth the consumption of oil required for light-vessel service; the distinctions of lights in permanent structures being easily produced by other and more economical means.

To rebuild these light-vessels, fit them with proper illuminating apparatus, provide the necessary boats, anchors, chains, awnings, sails, and other necessary fixtures, would cost, on an average, from \$15,000 to \$18,000 each, against \$10,000 for the more permanent and

less expensive light-houses upon the screw-pile foundations.

Experience has shown the adaptability and economy of this kind of structure at such points as those indicated. There are now two structures of this kind in the waters of North Carolina, and a third one will be completed during the months of November and December of this year. The appropriations for each of these three lights—Wade's Point, northwest point of Royal Shoal, and Roanoke Marshes—was \$10,000, which has been found to be fully sufficient. In some of the cases this change from a light-vessel to a screw-pile light-house might be made out of the appropriation for repairs of light-vessels, when it might be found to be more economical to do so than to repair the light-vessel, if the department has the authority to direct such a substitution.

In most cases the appropriations provide for "a light-vessel" at a particular point; and how far the department might be authorized to go in authorizing a change would seem to be worthy of consideration. If the department has not the authority to make such changes, it is respectfully submitted that such authority should be conferred by Congress.

It also frequently happens that channels change or become

designed.

obstructed, and Congress makes appropriations for new lights in the vicinity of existing ones, rendering them of no further use to mariners; but there does not appear to be any authority vested in the department for discontinuing these useless aids, and they are therefore kept up at an expense to the government without producing any commensurate benefit to those for whom they were originally

It being evidently the policy of the government and country to provide such aids to navigation as are necessary, in the words of the law of August 7, 1789, to render it "easy and safe," it is respectfully submitted that Congress should give to the head of the department (the Secretary of the Treasury) the authority to discontinue any light-house, light-vessel, or beacon-light, which, from any cause, should at any time be found to be unnecessary for the "easy and safe" navigation of the vicinity in which it is placed. This state of things has already happened, now exists, and it most likely will happen again, especially with reference to the minor lights, such as those at the entrances to harbors, rivers, and to special channels.

With this brief retrospect and review of the light-house service for the last five years, the operations of the past fiscal year will be reported upon in detail, in geographical order, commencing with the first light-house district, which embraces all the lights and other aids to navigation from the northeastern boundary of the United States to

Hampton harbor, New Hampshire.

West Quoddy Head light-house has been rebuilt and fitted for a third-order lens.

Boat-ways have been built at Libby Island light-house.

Winter Harbor light-house has been built, and was lighted for the first time January 1, 1857.

Mount Desert Rock light-house has been raised ten feet; a new lantern has been placed, and the tower thoroughly repaired and fitted for the reception of a third-order lens.

Deer Island Thoroughfare light-house has been commenced, and will

be finished in time to be lighted on January 1, 1858.

Martinicus Rock light-house has been rebuilt of cut stone, and is ready for the reception of a third-order lens, (two towers.)

Fort Point light-house has been rebuilt and fitted with a fourth-

order lens.

Penmaquid Point light-house has been thoroughly repaired, and a

new keeper's dwelling has been built.

Seguin light-house has been rebuilt of cut stone; a first-order lens has been placed in the new tower, and new keepers' houses have been built of brick.

The rebuilding of Marshall's Point light-house has been commenced. Brown's Head light-house has been rebuilt, and a fifth-order lens placed instead of the reflectors.

A new dwelling for the assistant keeper has been commenced at

Manheigin Island light-house.

Tenant's Harbor light-house has been built, and is ready for illumination.

A stone beacon has been erected on Fiddler's ledge.

The stone beacons in *Penobscot river* have been rebuilt, and an iron spindle has been placed on *Fishing Rocks*, near the mouth of Kennebunk river.

The title to the site for Bass Harbor Head light-house has been approved by the Attorney General, but the date of the approval was too late to permit the commencement of the structure this season. It will be built early next season.

The papers relating to the titles of the sites of Widow's Island and Round Island light-houses are in possession of the district attorney.

An appropriation of \$4,500 was made in the law of August 3, 1854, for the erection of a light-house on Noddle's island. The officer of the Coast Survey who examined the site recommends that the light should be erected, and that Dice's Head light-house should be discontinued. If this be done, the new light-house should be built much higher than the law contemplates, and at least \$5,000 more than the amount appropriated will be required to so build it. The work, therefore, has not been commenced, and, as such an expenditure was not contemplated by the law, it is recommended that the

money be allowed to revert to the surplus fund.

The light-houses requiring to be rebuilt in the first district are the following, viz: Nasbis island, Eagle Island Point, Dice's Head, Burnt island, Wood island, Goat island. All of which it is proposed to rebuild as rapidly as the means provided for renovations, repairs, &c., of light-houses in the annual appropriations will permit, having due regard to the wants under this head of other parts of the coast.

To make a thorough repair of these structures would require an expenditure far beyond their actual value after completion, and entail an annual expenditure for keeping them in habitable order exceeding

the limits of a true economy.

All that can be done, unless special appropriations are made by Congress for rebuilding them, will be to keep them patched up by temporary expedients until they can be properly rebuilt.

At the close of the fiscal year ending June 30, 1858, there will be in this district no lights fitted with expensive and inefficient re-

flectors and lamps of the old system.

The buoy service in this district has received promptly all the attention that could be given to it. Some of the new points indicated by the appropriation bill of August 18, 1856, for completing the buoyage of the coast of Maine, have been marked by suitable buoys; and as the dangers to navigation on that coast shall have been sufficiently examined to enable the inspector to complete the buoyage in a proper and systematic manner, according to the act of September 28, 1850, it will be done.

The lights and other aids to navigation in this district have continued during the past year in the efficient and satisfactory state re-

ported by this office last November.

Prospect Harbor light-house is situated 5½ miles west of Narraguagus light-house, 5 miles northwest of Petit Menan light-house, and 4½ miles east of Winter Harbor light-house.

The harbor is not used as a harbor of refuge, and the village near

which it is situated has only a small coasting trade.

In the opinion of the board, the light is not of sufficient service to the general or local interests of navigation to justify its maintenance,

and its discontinuance is respectfully recommended.

Beauchamp Point light-house is situated two miles south of Negro Island light-house, in Penobscot bay. On account of its nearness to Negro Island light-house, it is of no use to the general navigation of the bay, and it is of but little use to the village near which it is situated, the commerce of which is small. Its discontinuance is respectfully recommended.

A small light has been erected, in conformity with the law, on Kennebunk river pier-head. It is only two miles from Cape Porpoise light-house, which is a guide to a harbor of refuge. As there is not water enough over the bar at the mouth of the Kennebunk river at low water to admit vessels drawing more than three feet, and as the commerce of Kennebunk port is small, the board is of opinion that this light should be discontinued, and accordingly respectfully recommend its discontinuance.

In the second light-house district, embracing the coast from Hampton harbor, New Hampshire, to Goosebury Point, Massachusetts, lenses have been placed in the following named light-houses: Annisquam, Straitmouth, Eastern Point, Ten-pound island, Baker's island, Marblehead, Cape Cod, Chatham, Monomoy, Great Point, Brant Point, Point Gammon, Cape Poge, Cuttyhunk, Dumpling Rock, Clark's Point, Palmer's island, Neda Point, Bird island, Wing's Neck.

A fog-bell has been placed at Eastern Point light-house, and a

new lantern has been erected.

New lanterns and keeper's house have been erected at Baker's Island light-house. The towers have been lined with brick, and an iron staircase built in one; a brick workshop has also been built.

Boat-ways, boat house, and storm house, have been built at Egg

 $Rock\ light-house.$

Cape Cod light-house has been rebuilt, and a first-order lens placed

Two houses for assistants have been built,

The site of the Scituate light-house has been protected from the action of the sea.

The light-houses at Long Island Head and Monomoy Point have

been lined with brick and thoroughly repaired.

Great Point light-house has been lined with brick; an iron staircase has been placed; brick work room built; a house for an assistant keeper built, and the keeper's house put in thorough repair.

Point Gammon light-house has been pointed, and a new staircase

built.

A new lantern has been placed on Cape Poge light-house.

A lantern has been placed on the keeper's dwelling-house at Holmes' Hole harbor, and a fourth-order lens fitted, as a substitute for the three lights designed for ranges into the harbor.

The light-house on Sandy Neck, Barnstable, has been rebuilt.

The rebuilding of Billingsqute Island light-house has been commenced. It will probably be finished this season.

The stone work of the Bishop and Clerks light-house is nearly finished.

Beacons have been erected on the Old Cock and Cormorant Rocks, in Buzzard's bay, and on Great Rock, Hyannis harbor, according to the terms of the law.

The beacon in the Merrimac river, Newburyport, has been rebuilt, according to the terms of the law.

The Great Fawn beacon has been repaired and finished.

The beacon on the Londoner has been repaired.

Two small beacons off Neponsett river have been repaired.

Various small repairs have been made on the light-houses in the

district, which do not require particular explanation.

In this district, the only lights which require to be refitted with lens apparatus are the two towers occupying the position of a first-class light station, on Thatchers island, off Cape Ann Point, Massachusetts, and the Boston light, on Little Brewster island, at the entrance to Boston bay.

The two light-house towers at Cape Ann are only 45 feet high, each; built of very inferior materials, badly constructed, and require attention, especially during the season of winter storms, to keep them in a fit condition for the exhibition of the lights. Occupying a prominent position, with many dangers to the navigator, of about two-thirds of the circle around them, it is believed the interests of commerce and navigation would be greatly benefitted by having two lights of the first order in place of the present ones; and that it will be a wise economy to substitute the lens apparatus whenever Congress may think proper to make the necessary appropriation for rebuilding them, the estimated cost of which is \$68,751.

The Boston light-house has been recently refitted, and as good a light is exhibited from it as the description of apparatus in use will produce. The tower, from original bad construction, is cracked in many places, which required the resort to temporary expedients to prevent serious consequences. Although it is believed that it must necessarily be rebuilt at no distant day—and there is no economy in patching up every year buildings of original bad construction—the present state of it is not such as to demand an immediate rebuilding.

which would require about \$71,000, built of cut stone.

Upon the completion and lighting of the light-house now under construction on the Bishop and Clerks reef, in Vineyard Sound, Masachusetts, it is the opinion of this board that the Point Gammon light house, distant only two and a quarter miles from the former,

should be discontinued.

It is respectfully submitted that the outlying light-house on Bishop and Clerks reef will meet fully all the requirements of navigation to render it "easy and safe" within the limits of these two lights, and that therefore to continue the exhibition of the Point Gammon light, after the exhibition of the one on Bishop and Clerks, will tend to embarrass and confuse navigators, while its exhibition could not, it is believed, be of the least use to them under the circumstances. Its discontinuance is therefore respectfully recommended.

There are in the second light-house district seven light-vessels occupying very exposed positions, with reference to gales and to the

floating ice, during the winter months.

During the last winter, from its unusual severity and the large quantities of thick floating ice, all of these vessels suffered greatly. A large quantity of cable and many anchors were lost, and the copper and planking of the vessels were so much injured by the chafing ice as to render it necessary to remove each one from its station for repairs as soon as possible after the opening of spring. In the performance of this duty, the Relief light-vessel has occupied for the time the station of the vessel withdrawn for repairs, thereby preventing all inconvenience or danger to navigation.

The Minot's Ledge light vessel, and the one to mark the dangerous reef known as the "Sow and Pigs," at the entrance to Buzzard's bay and Vineyard Sound, will, when the repairs are completed, be the last to be relieved from their stations for repairs in the district

during the present season.

The large number of buoys in this district, embracing the harbors, channels, and dangers in Massachusetts bay (Boston bay and harbor) and tributaries, Cape Cod bay and tributaries, the Vineyard Sound and Buzzard's bay and their tributaries, and Taunton river, have been well attended to, and the entire buoyage, so far as known, complete and perfect. Ample provision is made for supplying chains, sinkers, moorings, &c., from points adjacent to the principal localities where buoys are placed to meet casualties arising from storms, ice, or from damage by vessels.

The day beacons, of which there is a large number in this district, have been carefully looked after during the past year, kept in good repair and properly distinguished by color, and renewed as often as found to be necessary. These aids in this district are placed in very exposed situations, and are liable to great damage by ice during se-

vere winters.

The further examination of the site for the light-house known as the "Sow and Pigs" has satisfied this board of the impracticability of erecting a proper structure in that difficult locality, without incurring a much greater expense than, it is confidently believed Congress anticipated at the time the appropriations were made for commencing the work. The work, with your approbation and authority, has been abandoned. The funds remaining in the treasury on account of the several appropriations for that object will revert to the surplus fund, unless Congress should renew the appropriations and direct the work to be commenced. It may be proper to add, that a light-vessel marks this danger, which it was designed to remove upon the completion of the proposed light-house; hence the failure to erect a tower will not prove seriously, if at all, detrimental to navigation.

The operations on the Minot's Ledge light-house have been carried on with the energy and skill called for in a work attended with such

great engineering difficulties.

During the last winter a large barque was driven against the iron scaffold which had been erected on the rock. The scaffold was de-

stroyed and the rock itself somewhat injured, making a change in shape necessary in some of the foundation stones. The damage to the rock has not, however, much delayed the cutting of the foundation platform, and the engineer in charge reports that it is nearly completed.

This season's work was commenced on the 29th March, and up to September 30 the men had been $130\frac{1}{3}$ hours on the rock, and the number of days' work done in cutting down the rock has been $318\frac{4}{10}$.

It is probable that during next season the erection of the stone work will not be retarded by the stone cutting on the foundation platform, and that the laying of the stone will go on regularly from the commencement of good weather in the spring.

Four stones have been laid during the past season and the beds are

ready for laying five more stones.

As the laying of the first course is the greatest engineering difficulty of the undertaking, it is considered that the progress of the work in this regard has been very satisfactory. More than half of the stone cutting of the tower is finished and the remainder can be finished next year if it be found necessary.

The engineer in charge estimates that the work can be finished in two years from this time. The board is of opinion that if no unfor-

seen accident occurs this estimate is correct.

The first appropriation for this work was made March 3, 1851, amounting to \$80,000. By a joint resolution of Congress, approved March 27, 1854, the Secretary of the Treasury and the Light-house Board were authorized to determine the site and mode of construction. Accordingly, drawings and estimates were made for the work under the orders of the Secretary of the Treasury, and on the 1st February, 1855, the estimate, amounting to \$324,180 73, was approved by him, and the commencement of the work was authorized.

Another appropriation of \$75,000 was made on the 3d March, 1855,

and another of \$75,000 on the 18th August, 1856.

It thus appears that \$230,000 have been appropriated, leaving a balance of \$94,180 73 to be appropriated for the completion of the

work according to the approved estimate.

On the 1st July, 1856, the sum of \$109,222 96 remained in the treasury available for the work, and the board considers this sum sufficient to finish the operations of the present season, and to carry on those of the season of 1858, and accordingly asks for no appropriation

at this session of Congress.

In the third light-house district, embracing the coasts and sounds, &c., from Goosebury point, Massachusetts, to Squam inlet, New Jesey, and including the waters of Narragansett bay and tributaries, Long Island shore, Long Island Sound, New York bay, Newark bay, Hudson river, and Lake Champlain, the works of construction, renovation, and repair have been vigorously carried on in addition to the ordinary routine duties of the service.

At Watch Hill light-house the work authorized upon the seawall for the protection of the tower and buildings has been in progress.

Block Island light-house has been rebuilt, and the light will be exhibited before the close of the present season.

The buildings which were authorized at the last session of Congress at Point Judith light-house station have been erected.

At Beavertail light-house the new light has been exhibited, and

the fog whistle set up.

The keeper's dwelling at Lime Rock light-house has been built and the necessary repairs made to the Goat Island light-house.

The protection authorized to be made to the site of the Nayat Point

light-house has been completed.

All the beacons in Narragansett bay, except the Greenwich beacon, have been thoroughly repaired or rebuilt. The Greenwich beacon, being the least important of them all, will be put in good repair as

soon as the season will permit. The materials are on hand.

The following works have been completed: The protection of the light-houses at Execution Rocks, Sand's Point; beacon at Devil's wharf, beacon at Brockway's beach, Connecticut river; light-houses at Esopus Meadows, Rondout, Saugerties, Coxsackie, and Stuyvesant, Hudson river; light-house at Lloyd's harbor, light-house at Horton's Point. Beacons have been erected and lighted at Five Hook island, Coeyman's bar, Schodac channel, Hudson river.

The beacon at New Baltimore, which was carried off by the ice

during the winter of 1855, has been rebuilt.

Fog-bell towers have been erected at Stony point, Hudson river;

Saybrook point, North Dumpling, Connecticut river.

At Sandy Hook, the west beacon, the foundation of which had been undermined by the action of the sea, has been removed to a secure position; a new screen erected, and the main light-house fitted with a new lantern and a 3d order lens.

The following works are now in course of construction:

First class light house at Great West bay will be completed by 30th November.

First class light-house at Fire island.—A wharf, store-house, and temporary barracks for the accommodation of the workmen have been constructed, and the greater part of the material required for the construction of the tower has been procured and landed at the site, and it is expected that the tower will be completed and ready for exhibiting the first order lens from it by the middle of the next summer.

Iron beacons, or day marks.—Nearly all of these structures in Long Island Sound and Fisher's Island Sound were swept away by the ice last winter. The following beacons have been replaced, or will be before the 1st December: Sugar Reef, Sea-flower Reef, Black Ledge, Whale, Whale Rock, Latimer Reef, Hen and Chickens, Watch Hill, two in Lloyd's Channel.

Newark Bay, Passaic light-house.—A substantial stone pier has been constructed at this point for the foundation of a new light-house and keeper's dwelling.

A similar one has been commenced at Bergen Point.

The beacon at the corner stake will probably be completed during the month of November.

Beacon at Van Wie's Dam, Hudson river.—This work has been twice commenced this year, but each time the material has been swept away by a sudden rise of the river. It will, however, probably be finished this season.

At Split Rock, Lake Champlain.—The light-house tower has been fitted with a new lantern and lens, and a new dwelling erected for the

keeper.

Simultaneously with the exhibition of the first class fixed light at Great West bay, Long Island, situated about halfway between Montauk Point light-house and Fire Island light-house, on the 1st January, 1858, a first class lens light, fixed, varied by flashes, will be exhibited from the Montauk Point light-house.

Upon the completion of the first class tower at Fire island, now under construction, and which it is expected will be finished early next season, there will be three first class light-houses fitted with first-order lens apparatus, properly distinguished, on the seacoast of Long Island from Montauk Point to the entrance to New York, a distance of about 120 miles, which will render the navigation along that coast, with ordinary care and precaution, entirely "easy and safe."

The nine small lights near Whitehall, and the two lights on the pier at Burlington, Vermont, and on Isle au Motte, in Lake Cham-

plain, authorized by Congress, have been built and lighted.

The buoys authorized for the channels and obstructions in that lake

have been placed and duplicates provided.

The titles to the sites for the lights authorized to be erected on Point au Roche and Windmill Point have been approved by the Attorney General, and the structures will be erected next season. The title to the remaining light on that Lake at Crown Point, New York, has not yet been perfected.

Lens apparatus has been either provided for, or already placed in,

all the lights in the third district.

The light-vessel authorized to be placed to mark Long Shoal, off Cornfield Point, in Long Island Sound, has been built and placed at her station.

The light-vessels have undergone the necessary repairs consequent

upon the damage from the gales and ice of the past winter.

The buoy service has received the usual strict attention in this district during the past year, and all losses by casualties have been repaired.

The two light-house towers at Navesink, N. J., marking the approach to the bay of New York, are in a dilapidated condition, the consequence of original bad materials and workmanship, and it has been represented that there is apprehension that they are not capable of standing much longer the heavy winter storms of the coast.

The position is one of great exposure, the lights of much importance, and it is believed it will not be safe to trust to the stability of the present towers much longer. With this exception, the aids in this district, as elsewhere along the coast, are in good repair and in a high state of efficiency. The estimated cost of constructing these two towers of cut

stone, and fitting them with proper apparatus, is \$72,941.

In the fourth light-house district, embracing the coast of New Jersey from Squam inlet to Metomkin inlet, Virginia, and including the inlets of that part of the coast of New Jersey and Virginia, and the Delaware bay and river, the works of construction and repair have been less numerous than during the previous year, the aids to navigation, in general, having been put in thorough order in 1853-'54 and 1854-'55.

The destruction of the old light-house tower at Barnegat having been seriously threatened, it was considered expedient, in view of the importance of the light, to erect a temporary frame structure from which to exhibit the light until the first class tower, authorized by Congress last year, and which is in progress, should be ready for lighting.

The first class light at Absecom, New Jersey, having been completed, was lighted on the 15th of January last in conformity to long previous notice, and has served greatly to facilitate navigation along

that dangerous coast.

It is a fact worthy of remark that on this part of the coast of hitherto frequent and appalling shipwrecks, since the exhibition of this light, a period of about ten months, there have been no wrecks in its vicinity.

The new first class tower authorized to be erected at Cape May will be commenced so soon as the weather will permit, after the

necessary materials shall have been collected at the site.

Since the destruction of the foundation work at Cross Ledge, in Delaware bay, by the ice, no further attempts have been made to

erect a light-house at that place.

It is very doubtful as to the practicability of erecting screw-pile light-house structures at that locality and on Ship John shoal which would resist the ice, and, unless Congress should direct otherwise, (the funds available being insufficient for completing the works,) they will not be commenced.

The site for the light-house on Fenwick's island has been selected and marked; and the title papers are in the hands of the United

States district attorney for examination and report.

The damage done to the Brandywine shoal light house has been thoroughly repaired during the past summer, and, it is believed, the present means will effectually resist the heavy masses of floating ice to which it is exposed during the winter months.

The ordinary work of repair and preservation in the fourth lighthouse district has been done during the year, and the towers and buildings, with the illuminating apparatus, lanterns, and fixtures,

are in an excellent and efficient state.

All the light-houses in this district are fitted with lens apparatus,

with the exception of Cape May, which is to be rebuilt.

The light-vessels and buoys have received their usual care and attention during the past year, and are kept in a satisfactory manner,

notwithstanding the unusual severity of the past winter.

It is reported that the light at Mispillion, in Delaware bay, is unnecessary even for the local interests of that vicinity. It is located at the mouth of Mispillion creek, which has at its entrance a depth of only one foot water at low tides. Only a few small flat bottomed vessels run in and out of this creek. For the general navigation of the bay this light is useless, and its discontinuance is respectfully recommended.

In the fifth light-house district, extending from Metomkin inlet, Virginia, to New River inlet, North Carolina, and embracing the inlets on the coast, Chesapeake bay and tributaries, Potomac, Rappahannock, and James rivers, Hampton roads and Elizabeth river, Albemarle, Pamlico, and Croatan sounds and their tributaries, the ordinary works of renovation, repair, cleaning, painting, and keeping the aids in an efficient state, has been faithfully and satisfactorily performed.

The new light-house on iron screw-piles foundation authorized to be built at the northwest point of Royal shoals, the beacon on Hatteras point, at Fort Washington, Potomac river, and the small light in Norfolk harbor, near the naval hospital, have been completed and

lighted.

The screw-pile light-house at Deep Water shoal, in the James river, having suffered considerable damage from the ice and storms of the past winter, temporary repairs were made, to enable the keeper to continue the exhibition of the light, and an entire new structure will be erected before the close of the season.

The other screw-pile lights in James river suffered, but not to the same extent, from the effects of the running ice upon its breaking up.

All necessary repairs have been made.

Lens apparatus has been placed in all of the light-houses in this district but one, and that will be fitted before the close of the present fiscal year.

The Cape Henry light-house has been provided with a suitable lens apparatus, and the necessary alterations and repairs have been made

to the lantern, &c.

The rebuilding of the Cape Charles light-house, authorized last year, has been commenced, and its completion may be expected during the next year. The title to the site of the light-house at Sandy Point, in Chesapeake bay, has been approved, and the work will be commenced without unnecessary delay.

The materials for the iron screw-pile light-house at Roanoke marshes, North Carolina, have been procured, and the light will be

erected and exhibited before the beginning of the year 1858.

The sites for the lights authorized at Cherrystone, Chesapeake bay, and at Stingray Point, mouth of the Rappahannock river, have been examined and selected, and it is expected that the structures will be put up at an early day.

No title has yet been obtained to the site of the small light autho-

rized to be erected at Drum Point, Chesapeake bay.

The light-house authorized at Pungoteague, Virginia, on the eastern shore of Chesapeake bay, cannot be built until after the meeting of the legislature of the State, jurisdiction ceded, and the title approved in conformity to law.

The light authorized to be built on Love Point, on the extremity

of the shoal, (Kent island, Maryland,) has not been commenced.

A light on this point would be of very little benefit to navigation, in consequence of the length of the shoal extending from it, and the appropriation is wholly inadequate for the erection of a stable iron screw-pile structure on the extremity of the shoal.

It has been represented by those interested in the navigation of that part of Chesapeake bay and tributaries that a light on Swan Point would subserve all the purposes contemplated by the erection of one on Love Point. To make this substitution it will require the authority of Congress, as a change of the object of the appropriation.

The unusual severity of the past winter, accompanied by larger masses and fields of floating ice in every part of this district, caused great damage to the light-vessels and buoys. The former have been regularly relieved and put in repair, and the buoys were replaced as soon as the season would permit.

All the aids to navigation in this district have received the greatest

attention, and the buoyage and stakeage completed throughout.

Ordinary repairs have been made, when needed, to such light-houses as most require them, so far as the means available would admit.

In 1854, Congress made an appropriation for the erection of a light-house on Smith Point shoal, mouth of the Potomac river, in Chesapeake Bay, to serve, when completed, as a substitute for the light-house on Smith's Point and the light-vessel stationed off that shoal.

The sum appropriated having been found to be wholly inadequate to the erection of a suitable and durable structure at that exposed

place, the appropriation has gone to the surplus fund.

At the time this appropriation was made the light-vessel stationed to mark the point of the shoal was very small, and exhibited a very dim light. Since then a better vessel, fitted with the best illuminating apparatus that can be used on board of light-vessels, has been placed at that point. The light-house is only about three miles from the light-vessel, and on the opposite side of the Potomac river entrance to, and within a few miles of, Point Lookout light-house. The light-vessel not only marks the extremity of the Smith's Point shoal, but serves also as a guide to the entrance of the Potomac river, independently of the light-house on Point Lookout.

The Smith's Point light house is not, therefore, in the opinion of this board, of any utility; the foundation upon which it is built is wearing away by the constant abrasion of the tides, rendering frequent

expenditures upon it and the tower necessary.

The board, therefore, respectfully recommends that it be discon-

tinued.

The light-vessel stationed near the channel above Craney island, leading from Hampton Roads to Norfolk, is very old, and the light not as reliable as would be a small one shown from a small screw-pile tower, which could be erected for about \$10,000 or \$12,000. True economy would seem to indicate the necessity for erecting such a structure in place of rebuilding and maintaining a vessel requiring, in addition to a keeper, a sufficient crew to take care of the vessel as well as the light.

The Ocracoke channel light-vessel, and the Beacon island light-house, at the same place, have, several times, been reported by this board as useless, and their discontinuance has been recommended.

This recommendation is again respectfully renewed.

The Nine Feet shoal light-vessel was originally authorized for a special object. That object no longer exists, in consequence of the

closing of the channel which it was designed to mark. The erection, during the past year, of the light-house on the northwest point of Royal shoal has further lessened the importance or necessity of the

Nine Feet shoal light-vessel.

The erection of a small beacon light at the Ocracoke main light station, to serve as a range light, at a cost, if authorized, of not over \$750, and form a part of the present light station at Ocracoke, will fully subserve the wants of the present and prospective navigation of that inlet much better than by keeping up the Ocracoke channel, and the Nine Feet shoal light-vessel, and Beacon island light-house, and at

an annual saving of between \$5,000 and \$10,000

The water over the bar at Hatteras inlet, which lies between Cape Hatteras and Ocracoke, has been gradually improving in depth for several years, and has reached such a depth, and the facilities for entering it are such, that it is becoming an important place of refuge as well as of ingress and egress to the many coasting vessels passing that part of the coast. A small light to guide to that inlet is said to be much needed, and "Oliver's Reef," or the "Swash," has been named as a suitable position for it. Although it is believed it would be much better economy to erect proper lights on iron pile foundations, if required, for either of those localities, at a cost of about \$10,000, than to place and maintain a light-vessel, yet should Congress so direct, the Ocracoke, or Nine Feet shoal light-vessel might be removed to one of those points, greatly to the benefit of the coasting

trade passing and entering that inlet.

All the light-vessels in this district, located in the waters of North Carolina, are very old, (with one exception, and that one a badly built contract vessel,) all of them requiring frequent and expensive repairs, and some of them are in such a condition from age as to render it almost certain that they must be rebuilt at no distant day, or their places occupied by iron screw-pile foundation lights, similar to those already erected at two points in those waters. The comparative expense in first cost has been shown to be greatly in favor of the permanent light, and that of annual support and maintenance of the permanent very small in comparison with that for the light-vessels. No engineering difficulties are apprehended in the substitution of permanent lights at the sites of those light-vessels, should Congress authorize their erection. The light-vessels which could be changed gradually to permanent lights are Crany island, Neuse river, Harbor island bar, Roanoke river, Brant island shoal, Croatan Sound, Long shoal, and Royal shoal.

In the sixth light-house district, extending from New River inlet, North Carolina, to Musquito inlet, Florida, the lights remaining at the date of the last report, which required renovating, have been fitted with lens apparatus, except the one at Charleston, South Carolina, which will be refitted and ready for lighting on the first of January, 1858. The new first class light at Cape Romain, South Carolina, will be exhibited for the first time on the 1st January, 1858, simultaneously with that of the new light at Charleston, South Carolina.

The Battery light at Charleston has been completed and lighted. The lights at Cape Lookout and Hunting island are in progress,

and the one authorized at Fort Point, near Georgetown, South Carolina,

will be built during the coming season, (winter.)

The Tybee main light has been renovated and fitted with a lens apparatus of the 2d order, and the beacon light with one of the 4th order.

St. Simon's, Cumberland island, and Amelia island lights have been fitted with lens apparatus, adapted to the height of the respective towers.

The beacons authorized at Amelia island and at Sapelo, Georgia,

will be erected during the present season.

The title to the site for the light-house at the mouth of St. John's river, Florida, having been approved, the light-house will be built

during the next winter.

The three small lights authorized in the St. John's river at the last session of Congress await titles, none having as yet been obtained. The light vessel authorized to be placed off Darue's Point, in the St. John's river, and the buoys and stakes, have been placed, to the great satisfaction of those navigating that river.

No titles have been obtained to the sites for the range lights authorized for the entrance to Georgetown, nor for the light in the "bay,"

Savannah, Georgia.

The title to the site of the small light authorized to be built on Mount Pleasant, in Charleston harbor, has been approved within a short period, and the necessary steps will be taken for the early erection of the structure.

During the past year, one of the range beacons on Sullivan's island, Charleston harbor, was destroyed by fire. It was promptly rebuilt.

Having failed to obtain valid titles to the sites for the lights and beacons authorized to be erected at North Edisto, Hilton Head, and in Calibogue Sound, South Carolina, the appropriations have gone to

the surplus fund.

The first class light-vessel stationed about twenty miles from Cape Fear, to mark the outer extremity of the Frying Pan shoals, having been found to require extensive repairs to her hull, has been withdrawn from her station, and is now in the hands of the ship builder. There being no relief light-vessel in this district, and none in the service of sufficient tonnage to occupy so exposed a position as that off Frying Pan shoals, it was not possible to do otherwise, under the circumstances, than to abandon the station, of which due public notice was given.

The light-vessel off Charleston, and those off and in the Savannah river, have undergone, during the year, all necessary repairs, and new illuminating apparatus has been substituted for the old in these light-

vessels.

The buoyage and beaconage in this district have been completed to the extent authorized, and, it is believed, fully to the wants of navigation, with the exception of that of the channels leading through the important inland navigation from Charleston to Savannah, and to the St. John's river.

It is reported that day beacons, stakes, and buoys are much needed to guide the two mail steamers running from Charleston and the three mail steamers running from Savannah through the inland passages by day and by night. It is estimated that the sum of \$10,000, judiciously expended, would fully accomplish this object, and thereby complete the buoyage and beaconage of that part of the southern coast.

Congress having, at its last session, authorized the establishment of a naval station at Brunswick, Georgia, it is considered pertinent to notice the fact that the present third order light at St. Simon's (the entrance to the harbor, and which has been recently improved from a small harbor light to its present character,) will be found to be of too limited a power and range for so important a place as it is likely to be at no distant day. A first class light and a small beacon light near it, to serve as a range for crossing the bar at night, would seem to be desirable, if not indispensably necessary, in view of these facts.

The base of the light-house tower at the "dry oyster beds," in the Savannah river, near its entrance, is much worn by the action of tides and waves of the sea, and the tower is in imminent peril of being destroyed by a severe northeast gale or hurricane. The keeper does not reside in the tower, he being provided with a dwelling on Cockspur island. Should a new tower be authorized, it is proposed to have it constructed of such materials and in such a manner as to render it safe for the keeper and family to reside in it, and prevent thereafter the evil consequences which have and now often happen by reason of the inability of the keeper to reach the light, by means of a boat, to light the station in bad weather and at times when, of all others, the light is most needed by vessels bound into the river.

Since the erection of the two beacon lights on Morris island, in Charleston harbor, for leading through the "Overall channel," across Charleston bar, that channel has so entirely changed, as will readily appear from an examination of the chart recently published by the Coast Survey Office, that they no longer serve as a guide for it, and should any vessel attempt to run by them as a range, the consequences to her would be disastrous. It is therefore respectfully recommended

that authority be given for their discontinuance.

On the southern coast, embraced in this light-house district, the gales of last winter were very trying to the light-vessels and buoys, as elsewhere. Moorings of light vessels were lost, and many buoys were carried away or destroyed, rendering it indispensable to incur considerable expense in restoring them.

Among the important casualties in this district during the past year was the sinking by a steamer of the iron bell-buoy stationed off the

entrance to the main channel entrance to Charleston.

The frequent collisions of vessels and buoys, arising not unfrequently from carelessness or indifference to the consequences on the part of those in charge of vessels, and the not unfrequent use made of buoys by vessels in warping or anchoring by them, to save the trouble of letting go an anchor while waiting for a tide or breeze, to the serious detriment of the service, both in expense and in removing the buoys from their proper positions, would seem to require the passage of an act similar to the acts passed in some of the States, (New York, Rhode Island, &c.,) laying the offending parties under heavy penalties.

In the seventh light-house district, including the coasts from Mosquito inlet, Florida, to Egmont key, Florida, and embracing the most dangerous part of the entire coast of the United States to the navigator, the service has been well attended to, and recognized by mariners.

The beaconage and buoyage, although comparatively limited, (there being but few channels and harbors in the district,) has been completed upon the general systematic plan as far as authorized, and the new beacons yet to be erected will be completed during the present working season.

The most important light-house structures under way in this district are the Dry Bank (near Coffin's patches) light-house; an iron screw-pile tower for a first-order fixed light; and the first class masonry tower at Dry Tortugas.

These two important light-house structures will, it is confidently believed, be ready for exhibiting the lights by the close of the present

working season in that quarter.

Upon the completion of the Dry Bank light-house, the light-house at Carysfort reef will be fitted with a first-order revolving lens apparatus, to provide a proper distinction of the lights on that dangerous reef, and both lights will be exhibited with the change, simultaneously, in March next.

The Egmont key (entrance to Tampa bay) light-house will be rebuilt, as authorized, this season, and fitted with proper lens apparatus. There are no light-vessels in this district, Congress having authorized the erection of screw-pile permanent structures in lieu of them at points not adapted to masonry structures.

The iron screw-pile beacon on Rebecca shoal will, it is expected, be

completed this season.

The commencement of the Jupiter inlet light-house, on the coast of Florida, for the building of which Congress has made two appropriations, and the requisite materials provided under the first, was delayed by the unexpected breaking out of the Indian hostilities in that quarter; and it is feared its commencement will not be found

practicable during the ensuing year.

The only additional aid to navigation required in this district, and the only first class light-house which it is believed is required on any part of the coast of the United States, is one on or near Alligator reef, between the Dry Bank and Carysfort reef light-houses. Whenever Congress may think proper to authorize the erection (at a cost of about \$130,000) of a suitable light-house at that locality, and the light is exhibited, the entire extent of this dangerous coast and reef will be as perfectly lighted as it is believed any capable and intelligent mariner could desire.

In a distance of three hundred miles there will then be Dry Tortugas, Sand key, Dry Bank, Alligator reef, Carysfort reef, Cape

Florida, and Jupiter inlet seacoast lights.

The light on Cape Canaveral, from its limited power and range, has never been of much, if indeed any, benefit to navigators, not-withstanding its prominent and highly important position.

Recent surveys made at and off Cape Canaveral have developed dangerous shoals, extending a distance of twelve miles, rendering it

dangerous to approach the light near enough to see it, unless under very favorable circumstances.

No navigator who is aware of the existence of these dangerous shoals would be justified in running his vessel boldly for this light, especially in bad weather, unless his vessel is of very light draft.

From the deck of a vessel—say fifteen feet above the water—this light (65 feet high) cannot be seen, under the most favorable circumstances of weather, over fourteen miles, or within two miles of the

outlying dangers.

Whenever Congress may think it necessary or advisable to rebuild the light-house at this important point, one of the first class, and not less than 150 feet high, will be required, to be of any use to the navigator from the Gulf, the estimated cost of which is \$68,751. The point is a prominent one, without harbor facilities for landing materials, provisions, workmen, &c. The season, too, is short for carrying on economically an operation of this sort.

In the eighth light-house district, embracing the coasts from Seahorse key, Florida, to Barrataria bay, Louisiana; and including the entire coasts of Alabama and Mississippi, with the major part of Louisiana and a large portion of Florida, the works of rebuilding authorized in 1854, and the buoyage and the stakeage of the district have been in progress.

Lens apparatus has been either placed or provided for placing at an

early day in all the light-houses.

The principal channels, harbors, and obstructions have been carefully and systematically marked, as authorized, by beacons or buoys, and lists published.

No titles have been obtained as yet to the sites of the lights authorized on St. Joseph's island, Southwest cape, St. George's sound, at

Proctorsville, Amite river, or at St. Andrew's bay.

The first class light-house at Pensacola is under construction, and it is expected that it will be completed during the present working season; after the completion of which the beacons authorized, as ranges for crossing the bar and making a safe anchorage at night, will be erected.

The first class light-house on Sand island entrance to Mobile bay

will also be commenced at the beginning of the working season.

The rebuilding of the St. Blas light-house, in place of the one destroyed by a hurricane, will be commenced without unnecessary

delav.

The Merrill's Shell Bank light-vessel occupies an important position on the line of steamers and sail vessels; but as it is necessarily kept up at the usual expense of light-vessels without affording as reliable a light as a permanent structure, and as this is an old vessel, requiring frequent and extensive repairs, it is respectfully submitted that it would be great economy to substitute a small iron screw-pile foundation light at a cost of about \$12,000.

A great reduction will be made during the course of the current year in the consumption of oil and other supplies in the numerous small lights in this district by the introduction of lens apparatus. These lights, requiring to be seen in no case a greater distance than the power of a fourth-order lens, and many of them only that of fifth and

sixth orders, were fitted with lamps in numbers making the consumption of oil, in the majority of cases, equal to that required for first-

order lens lights.

This has since been remedied by placing lenses of ample power and range for the respective localities, and affording more reliable lights at an average of one-eighth to one-sixteenth the consumption hitherto of oil, wicks, chimneys, &c.

Congress, at its session in 1854, made an appropriation for the erection of an iron screw-pile light-house as near the entrance to the channel of the Mississippi river at the Southwest Pass as might be found practicable, in place of the present light, which is situated at a

considerable distance from the bar at the mouth of the river.

Should the necessary additional sum required for building this important light-house be appropriated by Congress, it will be commenced and completed at an early day. Its estimated cost is \$115,000, leaving \$70,000 to be appropriated in addition to the \$45,000 appro-

priated August 3, 1854.

The light at the South Pass being more prominently to seaward than the present light at Southwest Pass is only useful to mark the delta in approaching it, but it is believed that it could be discontinued without detriment to the navigating interests upon the exhibition of the proposed first class light at the entrance to the Southwest Pass on the site already selected, as was done after the exhibition of the Pass à l'Outre light in the case of the Northeast Pass light, which was discontinued.

In the ninth light-house district, embracing the coast and navigable waters from Barrataria bay, Louisiana, to the Rio Grande, the storm season was unusually severe, and much damage was done to the lightvessels, buoys and stakes, and considerable injury to some of the light-

The repairs to the light-vessels, which were heavy, and those to the light-houses, were promptly made and the light-vessels restored to

their proper positions.

The buoyage and stakeage, the former off the dangerous bars and in the main channels, and the latter in the shoal broad waters of the coast, have been well cared for during the year.

The light-houses authorized to be built at the entrances to Barrataria and Timballier bays, and at the Sabine Pass, have been completed and

the lights exhibited.

The materials for the light-houses at Ship shoal, Swash opposite Alligator Head, and at Half Moon reef, have been prepared, and these structures will, it is expected, be completed during the coming winter months.

The range beacons at Galveston, the day beacon on the north breaker, Galveston bar, and the small day beacon on Pelican island have been completed.

The channel leading across the bar at Galveston and into the bay has been buoyed according to the developments made by the recently

published chart of that locality.

The recent survey of the entrance to Galveston shows that the erection of one, or at most two, small range beacon-lights on Bolivar Point, in connexion with the Bolivar Point light-house, would serve as a better and more reliable guide to the harbor from sea than the light-

vessel at present kept just inside the bar.

The expense of these two beacons would be nominal compared with the expense of the light-vessel, which might be then dispensed with. Authority for this change and an appropriation of \$1,700 will be required if concurred in. The necessary materials for elevating the cast iron light-house towers at Bolivar Point and at Matagorda have been prepared, and the work of raising the towers and fitting them with proper lens apparatus will be executed during the ensuing winter.

The light authorized to be placed on Gallinipper Point, in Lavacca bay, having been condemned as unnecessary, in conformity to the law

the appropriation reverts to the surplus fund.

No titles have been obtained to the sites of the small lights authorized at Saluria, Corpus Christi, and at the mouth of the Rio Grande. Steps will be taken as speedily as possible for the erection of the lights authorized on Shell keys and in Atchafalaya bay, on southwest reef, to serve as a substitute for the Point de Fer light-house, and for

the Alchafalaya light-vessel.

By the completion of the Ship Shoal light-house, the one on south-west reef, and (should Congress authorize the discontinuance of the Galveston light-vessel) by the erection of the range beacons, three light-vessels (all on that part of the coast) and one light-house (badly placed) will be gotten rid of, and the navigating interests benefitted. The saving in point of annual expense will be considerable, owing to the rapid decay and other sources of expense in keeping up light-vessels on the southern coast.

In the tenth light-house district, embracing the St. Lawrence and Niagara rivers, and Lakes Ontario and Erie, the works of rebuilding, repair, and refitting have been prosecuted during the short working season of the year with great vigor; many of the buildings which past seasons or the means available would not admit of being properly repaired, being in a very dilapidated state, have been attended to. Lens apparatus has been either placed, or is in hand ready for putting up as soon as the season will allow, in all the lights in this district.

The beacon at Cataraugus creek, in Lake Erie, which had been de-

stroyed, has been rebuilt.

The lake coast light at Dunkirk has been thoroughly repaired and

fitted with a third-order lens and new lantern.

The light-house at Black river, Ohio, has been rebuilt, and the pier on which the light is placed is now under repair, as specially

authorized by Congress at its last session.

The beacon light at Huron, Ohio, is in course of reconstruction, and will be completed and the new light exhibited before the close of navigation; and the repairs authorized to the foundation by the last Congress will, it is expected, be finished before the close of the working season.

The beacon-light at Erie has been rebuilt, and new apparatus pro-

rided for it

The iron piles of the foundation of the Maumee Bay light-house, which was destroyed by the floating ice of last winter, have been renoved.

In placing the fog-bell in the Buffalo light-house it was found

necessary to raise the tower a few feet, so that a lens of the necessary power could be placed in it. This work will be completed during the season, when a third-order lens and new lantern will have been placed, and the fog-bell fitted as authorized.

The Grassy Island light-house, in Detroit river, was found to be in a dangerous condition, rendering it necessary to rebuild it this season to save it from destruction during the winter. It will be finished be-

fore cold weather sets in.

The Presque Isle (or main light tower at Erie, Pennsylvania,) required extensive repairs, and it was designed to make them this season; but other works of a pressing character have delayed the commencement until it will be too late to do so prudently this season.

The lens apparatus and lantern for this tower are on the spot, and the work will be completed before the end of the present fiscal year. This is one of the most important lights on the lake, and has long needed repair and improvement of the illuminating apparatus.

At Grand River light-house repairs and improvements similar to those designed for the one at Presque Isle have been necessarily de-

ferred until the opening of navigation next spring.

Lens apparatus have been placed this year at West Sister Island light-house, Turtle Island light-house, Stony Point light-house, and Barcelona, (Portland). Lanterns have been constructed, and are ready for such of the light-houses in Lake Ontario most in need of them.

Nearly all the light-houses in the 10th district were built many years since by contract, and they bear positive evidence, both in material and construction, of a want of proper supervision and inspection. This will account for their present state of decay. The wooden stairways, &c., in badly constructed stone and brick towers, soon decay, and render an amount of annual repair necessary, which true economy forbids. Good materials and faithful workmanship can alone remedy this hitherto crying evil in the light-house service.

No title has been obtained to the site for the small light authorized to be erected in Maumee bay, Ohio. Negotiations have been

commenced with the proprietors of the land.

The buoyage in the St. Lawrence and Niagara rivers is attended with comparatively large expense, owing to the strength of the currents and the large quantities of floating ice in the spring. The en-

tire buoyage is completed and lists printed.

In the eleventh light-house district, embracing the Lakes St. Clair, Huron, Michigan, Superior and Green bay and their tributaries, the operations during the year and present season have been carried on with great vigor by the engineer of the district, and the inspections have been made both by the inspector and engineer more advantageously than it was possible to do in previous years.

The light-house authorized by Congress last year on Traverse or

Charity island, in Michigan, has been built.

The Point au Barques light-house has been rebuilt.

The light at Taylersport, which was built last year by contract, but not received, has been accepted and lighted.

The lights at Eagle river, La Pointe, and at Portage river, contracted some time since to be built, were, upon the representation of

them by the engineer officer, rejected, for the reason that they were

not built in conformity to the terms of the contract.

The light-house authorized at Minnesota Point, at the head of Lake Superior, has been under construction by contract since the opening of navigation of this year, but it is feared that the cold weather will set in before it is completed.

Repairs have been made (and at some of them very extensive repairs) at Windmill Point, Clinton river, Fort Gratiot, Saginaw river, Thunder bay, Presque Isle, Bois Blance, Cheboygan, Detour, South Manitou, Michigan City, Chicago, Southport, Milwaukie and Ontonagon, placing in such of them as had not been previously fitted suitable lens apparatus.

Lenses have been either placed or provided ready for setting up in

all the lights in this district.

The sites for the new light-houses authorized by Congress last year in this district have been visited, and such of them as have not been reported as unnecessary will be built when valid titles to the sites are obtained.

Those reported as being unnecessary will be referred to the authority designated by the law for a report to the department before any steps are taken for commencing their erection.

There are but few buoys or other day marks in this district. The buoys are taken up before the closing of navigation and replaced on

its opening at each locality.

The light-house authorized to be erected on the pier at Chicago is under the special direction of the Engineer in charge of the harbor

improvement on the N.W. lakes.

Early in the present season a contract was made for the iron work, which is now nearly completed. The erection of the light-house will be commenced as soon as the season opens sufficiently next spring to enable the contractors to transport the materials to Chicago. In the meantime the engineer is pushing the work on the piers of defence and the foundation of the dwelling-house. The materials have all been collected for the completion of the work, and the board is informed by the engineer that the structure will be finished and ready for lighting by the end of August, 1858.

In the twelfth light-house district, embracing the entire coast of the United States on the Pacific ocean, the new works authorized by Congress have been pressed towards completion in those cases in which the titles to the sites vested in the United States by reservation; but no title has been obtained to any site on that coast from individuals or corporations, except at Santa Barbara, where the corporate authorities of the town deeded the necessary land to the United States. Efforts, however, have been made to obtain titles to the sites for light-houses at San Pedro, Santa Cruz harbor, Point Reyes, and Point Lobos, but up to the latest date without success.

The legislature of California, at its last session, passed an act providing for the appraisement of such sites for light-houses as might be desired by the United States, but the main difficulty was in the titles

to the property to be conveyed.

The Santa Barbara light-house has been finished, and the light exhibited, and also the light authorized at Crescent City.

The light-house authorized at Trinity bay was reported by the officer charged with the examination and survey under the law as being unnecessary, and was not built.

The light-house at the mouth of Umpqua river, Oregon, has been

built, and the light will be exhibited early in the present fall.

The first class light-house tower on Tatoosh island (Cape Flattery, entrance to the Straits of Fuca,) will, it is reported, be completed and the light exhibited during the present year; and the light-house at New Dungenness will, it is expected, be completed and the light exhibited about the same time.

The light-houses authorized to be built at Shoalwater bay, and on Blunt's island, in Washington Territory, will, it is expected, be

built during the present working season.

The light-houses authorized to be built on the Pacific coast, and which have not been commenced, are at Point Hueneme, San Pedro harbor, Santa Cruz harbor, Point Lobos, and Point Reyes, in California; Cape Mendocino, in Oregon Territory; Cape Shoalwater bay, Red Bluff, and Blunt's island, in Washington Territory.

The buoyage in the harbor and at the entrance to San Francisco has been completed. An iron bell-buoy has been sent to be placed to mark the approach to the bar at that place, instead of the present

first class buoy without a bell.

The buoyage of Humboldt, Umpqua, and the Columbia river, has received all the attention that the waters of the localities and the

means available will admit.

The steam tender authorized by Congress last year will be ready to leave the Philadelphia navy yard, where it was built, early in November, and will reach San Francisco probably early in March. The presence of this vessel will serve the economical purpose of transporting supplies, materials, and workmen for building and repairing the light-houses, and also, in case of incursions of the Indians from the British dominions in the Straits of Fuca and vicinity, to protect the keepers and citizens in that quarter against their attacks

Representations have been made that a light is necessary between the bays of Monterey and San Francisco, and one on Mare island, in San Francisco bay. The latter is recommended mainly in consideration of the difficulties at night in approaching the navy yard and Benicia. Plans and estimates have been prepared, and can be laid

before Congress should it desire them.

The supplies of oil, &c., &c., have been distributed with the usual punctuality and economy by two supply vessels on the Atlantic and Gulf coast, the "Guthrie" and "Cobb," and the "Lamplighter" on the lakes.

All of which is respectfully submitted. By order of the Light-house Board,

> W. B. SHUBRICK, Chairman Light-house Board.

THORNTON A. JENKINS, W. B. FRANKLIN, Hon. Howell Cobb,

Secretary of the Treasury.

APPENDIX TO LIGHT-HOUSE BOARD REPORT.

Lights considered unnecessary and recommended to be discontinued.

Prospect Harbor light-house, Me.
Beauchamp Point light-house, Me.
Kennebunk Pier light-house, Me.
Point Gammon light-house, Mass.
Mispillion light-house, Delaware bay.
Smith's Point light-house, Va.
Ocracoke Channel light-vessel, N. C.
Beacon Island light-house, N. C.
Nine Foot Shoal light-vessel, N. C.
Two Overall beacons, Charleston, S. C.

Southwest Pass light-house.
South Pass light-house....

To be discontinued upon the completion of the light-house authorized August 3, 1854, to be built on screw-pile foundation, near the entrance to the Southwest Pass of the Mississippi river (Additional appropriation of \$70,000 required.)

Galveston Bay light vessel, Texas When beacon ranges are erected on Bolivar Point. (Appropriation required \$1,700.)

TREASURY DEPARTMENT,
Office Light-house Board, Nov. 6, 1857.

Sir: I have the honor, in compliance with a call from the department, to transmit herewith list A, showing the aggregate amount of appropriations which have been made, as collated from the Statutes at Large, for the erection of light-houses and beacons, for building and equipping light-vessels, and for providing buoys, &c., from the organization of the federal government, in 1789, to the 3d of March, 1857, and showing the amounts thus appropriated under the heading of the respective States, or the localities as named in the bills.

Also, statement B, showing the aggregate of appropriations embraced in the general appropriation bills for support and maintenance of light-houses, light-vessels, beacons, and buoys, from August 7, 1789, the date of the first appropriation for those objects, to March 3, 1857.

Appropriations for special objects, which appear in the general appropriation bills, are included in the sums charged to the respective States or localities, showing the entire amount of appropriations made for special objects; but as these sums appear in the general appropriation bills for maintenance, they have not been deducted, and, therefore, the aggregate of the two sums will be more than the actual appropriations to that extent.

17 F

For Maine.

No account is taken of the large sums which have gone to the surplus fund, and which would greatly reduce the aggregate sums stated.

Very respectfully,

THORNTON A. JENKINS,

Secretary.

Note.—In collating the amounts of appropriation from the Statutes, constituting the aggregates under the several heads of States or localities, all sums have been taken from the general appropriation bills which were made for building, rebuilding upon new objects not properly belonging to the appropriations for support and maintenance. No account is taken in these aggregates of the sums which have been carried annually to surplus fund of the treasury.

 \mathbf{B}

Statement showing the aggregate amount of appropriations under the heads of support and maintenance of the light-houses, light-vessels, beacons, buoys, &c., from the 7th August, 1789, to 3d March, 1857, collated from the Statutes at Large.

Aggregate amount.......\$17,174,258 58

Note.—This aggregate includes all sums in the general appropriation bills under the general head of light-houses, &c., rebuilding new lights, &c., when appropriated for in that bill. It also includes all sums appropriated for the life-boat and life-saving service, although that has not been under the management of, or in any way connected with, the light-house establishment service.

The Indians having accepted and removed to the reservations which the Senate had determined they must relinquish, and Congress having authorized the President to confirm those reservations to them, after such confirmation is formally made and accepted, the question may arise whether the United States is longer bound to pay these items to the Indians.

Office Indian Affairs, December 8, 1857.

No. 18.

Stocks held by the Secretary of the Treasury in trust for the Chickasaw national fund.

The above table is believed to embrace all the banks in operation in the different States, with a very few exceptions. Among the exceptions are the Mechanics' Bank, at Wilmington, Delaware, and a bank at Galweston, Texas, each with a capital of \$100,000.

The 311 banks in the State of New York are exclusive of 40 others that are winding up their affairs.

The apparent increase in the "other liabilities" of the South Carolina banks is in consequence of there being placed under that head about \$3,000,000 which had been heretofore tabulated as "capital."

according to returns dated nearest to January 1, 1857.

The apparent increase in the "capital" and "real estate" of the Georgia banks is in consequence of the Georgia Railroad and Banking Company being included in the above table. No statement of its condition for 1855 was received, and it does not appear in the secretary's report for that year. Its capital amounts to \$4,155,000, and its real estate to \$4,296,008.

Comparative view of the condition of the banks of the United States, according to returns nearest to January 1, 1837, 1841, 1842, 1843, 1844, 1845, 1846, 1847, 1848, 1849, 1850, 1851, 1854, 1855, 856, and 1857.

CES.

Note.—From the 1st of November, 1852, American pig iron ceased to be quoted. From that date "Scotch pig" has been quoted as having ruled the market price of "American pig." In May, 1853, "American pig" commanded §4 50 per ton more than "Scotch pig" The importations and exportations of manufactures of iron and steel have been blended in the returns with the unmanufactured article, and cannot be separately given. *Average price from January I to September 1, 1857.

Digitized for FRASER

Statement exhibiting the values of home production and importations of iron in the United States, with the increase or decrease compared with the preceding year, from 1824 to 1857, inclusive; the different tariffs under which the aforesaid production and importations were made; aggregate values of production and importations during the operation of each tariff, with increase less decrease of the same, and annual average of the same exhibits.

Note.—The production of anthracite coal in Pennsylvania for the year 1856 was 7,082,000 tons; bituminous, 3,162,000 tons. Maryland produced 750,000 tons; Illinois, 350,000 tons; Ohio, 300,000 tons; Kentucky, 210,000 tons; Virginia, 175,000; Tennessee and all other States, 200,000 tons; aggregate, 12,229,000 tons.

In the imports and exports of coal the quantities of anthracite and bituminous have been blended in the returns and cannot be separately given.

No. 50.

Comparative statement of the tariffs of 1846 and 1857.

NOTES.

Brown sugar and molasses pay, since January 1, 1852, a duty according to the pure saccharine substance produced in the refineries, which is, for pure indigenous sugar, 50 francs per 100 kilogrammes, or 21 shillings (\$5 08) per cwt.—English turiff.

The above information was obtained from the last London edition of the British Tariff and the "Customs' Tariffs of all Nations," edited by Hon. C. N. Newdegate, M. P., and brought Chrebeginning of 1855.

The produce of the United States, when imported in American vessels, pays the same rate of duty as similar goods imported in French vessels from the countries beyond Europe. http://frase.perion/this.phivilege are excluded raw materials belonging to fisheries and raw tin.—Prench tariff.

Statement exhibiting the number of American and French steam and sailing vessels engaged in trade between the United States and France, and vice versa; also, those (steam vessels) in contemplation, the number of 200 horse-power and upwards, tonnage, crews, and the aggregate entered and cleared at the ports of Boston, New York, and New Orleans, during the fiscal year ending June 30, 1857.

^{*} But 3 vessels were engaged in making the 14 trips: The Fulton, 6 voyages; the Arago, 6; and the Vanderbilt, 2.

[†] Of the above amount, but 7,967 tons were actually employed; but by repeated trips, (see above note,) the tonnage was increased to the figure given in the table.

† But 4 vessels engaged, one having made 2 trips.

§ All far above 200 horse-power.

Of this amount, the actual tonnage was 4,140, for reasons given in note f.
